FOR THE EIGHTH CIRCUIT**

No. 18-2559

LSP TRANSMISSION HOLDINGS, LLC,
Plaintiff-Appellant,

v.

KATIE SIEBEN, Commissioner, Minnesota Public
Utilities Commission, each in his or her official
capacity, et al.,

Defendants-Appellees.

ITC MIDWEST LLC; NORTHERN STATES POWER
COMPANY, doing business as Xcel Energy,

*Intervenors below-
Appellees,*

Submitted: Oct. 16, 2019

Filed: Mar. 25, 2020

Before: SMITH, Chief Judge, GRUENDER and
BENTON, Circuit Judges.

OPINION

SMITH, Chief Judge.

LSP Transmission Holdings, LLC (LSP) filed this appeal against Minnesota’s Public Utilities Commission and Department of Commerce; ITC Midwest, LLC (ITC); and Northern States Power Company doing business as Xcel Energy (“Xcel”) (collectively, “Appellees”). LSP asserts that the district court¹ erred in deciding that Minnesota’s right of first refusal (ROFR) provision does not violate the dormant Commerce Clause. The provision grants incumbent electric transmission owners a ROFR to construct, own, and maintain electric transmission lines that connect to their existing facilities. Minn. Stat. § 216B.246, subdiv. 2. Upon de novo review, we affirm.

I. *Background*

A. *Federal ROFR*

Pursuant to the Federal Power Act (FPA), the Federal Energy Regulatory Commission (FERC) regulates interstate transmission of electricity and the sale of electricity at wholesale in interstate commerce. *LSP Transmission Holdings, LLC v. Lange*, 329 F. Supp. 3d 695, 700 (D. Minn. 2018) (citing 16 U.S.C. § 824(b)(1)). States, however, retain jurisdiction over the retail sale of electricity and the generation, transmission, and distribution of electricity in intrastate commerce. *Id.* (citing 16 U.S.C. § 824(b)(1)).

FERC is also authorized to “divide the country into regional districts for the voluntary interconnection and coordination of facilities for the

¹ The Honorable Donovan W. Frank, United States District Judge for the District of Minnesota.

App-3

generation, transmission, and sale of electric energy” and to “promote and encourage such interconnection and coordination within each such district and between such districts.” *Id.* (quoting 16 U.S.C. § 824a(a)). “Regionally, FERC-approved nongovernmental agencies, independent system operators (‘ISO’s), oversee the operation and expansion of electric transmission grids. Each ISO issues a tariff, which establishes the terms by which its members build and operate grids. These tariffs are subject to the approval of FERC.” *Id.* at 700-01 (internal citations omitted).

Before issuing Order 1000, FERC allowed incumbent public utility transmission providers to exercise their federal ROFR. Under that regulatory regime, incumbents held priority status in choosing to construct new electric transmission lines in their respective service territories. *See id.* at 701 (citing *MISO Transmission Owners v. FERC*, 819 F.3d 329, 332 (7th Cir. 2016)). In 2011, “FERC issued Order 1000,” which in part, “eliminated the federal ROFR.” *Id.* (citing *Transmission Planning & Cost Allocation by Transmission Owning & Operating Pub. Utils.*, 136 FERC 61051, 3 ¶ 7 (2011) (hereinafter “Order 1000”)). Order 1000 specifically “direct[s] public utility transmission providers to remove from their [Open Access Transmission Tariffs] or other Commission-jurisdictional tariffs and agreements any provisions that grant a federal right of first refusal to transmission facilities that are selected in a regional

transmission plan for purposes of cost allocation.” Order 1000 at 3 ¶ 7.²

In substance, FERC’s Order 1000 reformed “its electric transmission planning and cost allocation requirements for public utility transmission providers.” Order 1000 at 1 ¶ 1 (citing 16 U.S.C. § 824e). “Order 1000 [is also] consistent with [FERC’s] effort to manage electric grids on a regional level” but “recognize[s] that states c[an] continue to regulate electric transmission lines.” *LSP Transmission*, 329 F. Supp. 3d at 701 (“We acknowledge that there is longstanding state authority [over] certain matters that are relevant to transmission planning and expansion, such as matters relevant to siting, permitting, and construction. However, nothing in . . . [Order 1000] involves an exercise of siting,

² “A ‘transmission facility selected in a regional transmission plan for purposes of cost allocation’ is one that has been selected, pursuant to a Commission-approved regional transmission planning process, as a more efficient or cost-effective solution to regional transmission needs.” Order 1000 at 2 ¶ 5. The elimination of the federal ROFR did not apply to utilities that were not selected in a regional transmission plan for purposes of cost allocation. *See id.* at 3 ¶ 7.

This limitation was born of . . . [FERC’s] concern that a complete ban could potentially threaten grid reliability if nonincumbents failed to complete needed projects in a timely fashion. The upshot was that rights of first refusal could be retained for facilities located wholly within the service territory of an incumbent whose development costs would not be spread to other parties . . .

S.C. Pub. Serv. Auth. v. FERC, 762 F.3d 41, 73 (D.C. Cir. 2014).

permitting, and construction authority.” (quoting Order 1000 at 33 ¶ 107)).

B. *State ROFR*

Regionally, Minnesota is governed by the FERC-approved regional transmission entity known as Midcontinent Independent System Operator (MISO). *Id.* “In accordance with Order 1000, MISO removed the federal ROFR provisions from its tariff.” *Id.* Thereafter, in response to Order 1000, Minnesota, along with other states,³ enacted a state statutory ROFR. *Id.* (citing Minn. Stat. § 216B.246, subdiv. 2). Minnesota’s ROFR law provides the following:

An incumbent electric transmission owner has the right to construct, own, and maintain an electric transmission line that has been approved for construction in a federally registered planning authority transmission plan and connects to facilities owned by that incumbent electric transmission owner. The right to construct, own, and maintain an electric transmission line that connects to facilities owned by two or more incumbent electric transmission owners belongs individually and proportionally to each incumbent electric transmission owner, unless otherwise agreed upon in writing. This section does not limit the right of any incumbent electric transmission owner to

³ “In response to Order 1000, several states enacted their own ROFR laws.” *LSP Transmission*, 329 F. Supp. 3d at 701 n.3 (citing N.D. Cent Code § 49-03-02.2; S.D. Codified Laws § 49-32-20; Neb. Rev. Stat. § 70-1028; 17 Okla. Stat. § 292).

construct, own, and maintain any transmission equipment or facilities that have a capacity of less than 100 kilovolts.

Minn. Stat. § 216B.246, subdiv. 2.

After MISO removed the federal ROFR and incorporated Minnesota's ROFR into its tariff, FERC approved the tariff. *LSP Transmission*, 329 F. Supp. 3d at 702 (citing *Midwest Indep. Transmission Sys. Operator, Inc.*, 150 FERC 61037, 61176 ¶ 25 (2015) (hereinafter "MITSO")). LSP, a transmission company based outside of Minnesota, challenged MISO's tariff. FERC, however, ruled that MISO is authorized to consider state laws in the regional transmission planning process. Based on FERC's ruling, LSP requested a rehearing. LSP argued, in part, "that FERC should preclude states from enacting ROFR laws." *Id.* (citing MITSO at 61176 ¶ 24). FERC subsequently denied LSP's request for rehearing. *Id.* (citing MITSO at 61176 ¶ 25).

C. Procedural History

After FERC denied LSP's request for rehearing, LSP first filed a petition for review against FERC, which was denied by the Seventh Circuit. *See MISO Transmission Owners*, 819 F.3d at 337. LSP contended that FERC erred in allowing MISO to recognize state ROFR laws. *Id.* at 336. The Seventh Circuit ultimately held that FERC's goal—"to avoid intrusion on the traditional role of the States in regulating the siting and construction of transmission facilities"—was proper and that Order 1000 terminated the federal ROFR, not ROFR laws enacted by states. *Id.* (internal quotation omitted).

Prior to LSP filing the present lawsuit, Xcel—a Minnesota-based public utility—and ITC—a Minnesota-based transmission company—“jointly exercised their rights of first refusal under § 216B.246” to construct the Huntley-Wilmarth line. *LSP Transmission*, 329 F. Supp. 3d at 703. The line is a proposed 345 kilovolt electric transmission line that was approved by FERC and is projected to traverse Minnesota for approximately 40 miles. *Id.* It “will connect two substations—[Xcel’s] existing Wilmarth substation north of Mankato, Minnesota and ITC[s] . . . Huntley substation, . . . south of Winnebago, Minnesota,” which was under construction at the time LSP filed its complaint against the Appellees. *Id.* “The [line] is scheduled to be complete[d] by January 1, 2022.” *Id.*

In September 2017, LSP filed the instant lawsuit against Minnesota’s Public Utilities Commission and Department of Commerce, challenging the constitutionality of Minnesota’s ROFR provision. LSP argued that the law violates the dormant Commerce Clause by discriminating against or placing an undue burden on interstate commerce. Eventually, Xcel and ITC intervened as defendants. Appellees then filed separate motions to dismiss LSP’s complaint for failure to state a claim.

The district court granted the motions. In doing so, the court concluded that *General Motors Corp. v. Tracy*, 519 U.S. 278 (1997), forecloses LSP’s arguments that Minnesota’s ROFR law overtly discriminates against nonincumbent or out-of-state transmission companies. The court also determined that even if *Tracy* does not foreclose LSP’s overt-

discrimination arguments, its arguments still fail because Minnesota’s ROFR applies equally to all incumbent electric transmission owners. Both in-state and out-of-state owners may use the ROFR and, thus, it does not discriminate for the former or against the latter.

As for LSP’s contentions that Minnesota’s ROFR law also places an undue burden on interstate commerce, the district court held that Minnesota’s interest in regulating its own local electricity market outweighs any incidental effects on interstate commerce. After the court entered its order dismissing LSP’s complaint, LSP filed this appeal.⁴

II. *Discussion*

A. *Standard of Review*

We review de novo the district court’s dismissal of LSP’s complaint. *U.S. ex rel. Raynor v. Nat’l Rural Utils. Coop. Fin., Corp.*, 690 F.3d 951, 955 (8th Cir. 2012). “In deciding a motion to dismiss under Rule 12(b)(6), a court assumes all facts in the complaint to be true and construes all reasonable inferences most favorably to the complainant.” *Id.* And while “a complaint need not contain ‘detailed factual allegations,’ it must contain facts with enough specificity ‘to raise a right to relief above the speculative level.’” *Id.* (quoting *Bell Atl. Corp. v. Twombly*, 550 U.S. 544, 555 (2007)). With that said, “[t]o survive a motion to dismiss, a complaint must contain sufficient factual matter, accepted as true, to

⁴ A number of amici also filed briefing: one in support of LSP, two in support of the Appellees, and one—filed by the United States—as a neutral advisor.

‘state a claim to relief that is plausible on its face.’” *Id.* (quoting *Ashcroft v. Iqbal*, 556 U.S. 662, 678 (2009)). “Threadbare recitals of the elements of a cause of action, supported by mere conclusory statements, do not suffice.” *Id.* (quoting *Iqbal*, 556 U.S. at 678).

B. *Constitutionality*

The Commerce Clause “grants Congress the power to regulate commerce between the states.” *IESI AR Corp. v. Nw. Ark. Reg’l Solid Waste Mgmt. Dist.*, 433 F.3d 600, 604 (8th Cir. 2006) (citing U.S. Const. art I, § 8, cl. 3). “Implicit within the Commerce Clause is a negative or dormant feature that prevents individual states from regulating interstate commerce.” *Id.* (quoting *United Waste Sys. of Iowa, Inc. v. Wilson*, 189 F.3d 762, 765 (8th Cir. 1999)). In other words, “[t]he dormant Commerce Clause keeps states from enacting ‘laws that discriminate against or unduly burden interstate commerce.’” *Id.* (quoting *S.D. Farm Bureau, Inc. v. Hazeltine*, 340 F.3d 583, 592 (8th Cir. 2003)).

When analyzing allegations that a state or local law violates the dormant Commerce Clause, we examine the law for the presence of both overt and non-overt discrimination. *Hampton Feedlot, Inc. v. Nixon*, 249 F.3d 814, 818 (8th Cir. 2001). “First, if the law in question overtly discriminates against interstate commerce, we will strike the law unless the state or locality can demonstrate, ‘under rigorous scrutiny, that it has no other means to advance a legitimate local interest.’” *Id.* (quoting *U & I Sanitation v. City of Columbus*, 205 F.3d 1063, 1067 (8th Cir. 2000)). “The discrimination may take one of three forms. The law may be discriminatory on its face

or, even if it is facially neutral, the law may have a discriminatory purpose or a discriminatory effect.” *U & I Sanitation*, 205 F.3d at 1067. Under the dormant Commerce Clause, a law is discriminatory if it benefits in-state economic interests while also inordinately burdening out-of-state economic interests. *Hampton Feedlot*, 249 F.3d at 818.

“Second, even if a law does not overtly discriminate against interstate commerce, the law will be stricken if the burden it imposes upon interstate commerce is ‘clearly excessive in relation to the putative local benefits.’” *Id.* (quoting *U & I Sanitation*, 205 F.3d at 1067). This is the *Pike* balancing test. See *S.D. Farm Bureau*, 340 F.3d at 593 (citing *Pike v. Bruce Church, Inc.*, 397 U.S. 137 (1970)). Essentially, “[t]hose challenging the legislative action have the burden of showing that the statute’s burden on interstate commerce exceeds its local benefit.” *Hampton Feedlot*, 249 F.3d at 818.

1. *Overt Discrimination*

As a preliminary matter, the parties extensively argue whether the Supreme Court’s decision in *Tracy* forecloses LSP’s arguments that the Minnesota ROFR provision overtly discriminates against nonincumbent and out-of-state transmission companies. *Tracy* held that Ohio’s differential tax treatment of natural gas sales by regulated local gas utilities and unregulated producers or marketers—whether in state or out of state—did not violate the Commerce Clause. 519 U.S. at 310. In reaching its holding, the Supreme Court concluded that Ohio’s favorable tax treatment of local utilities whose natural gas sales or distribution to consumers were tax-exempt did not violate the

Commerce Clause because the local distribution utilities were not similarly situated to the producers or marketers. *Id.* at 287-310.

Here, the district court pointed out that “[m]any of the entities that own existing transmission facilities [in Minnesota] are regulated public utilities, who serve captive markets and have monopolies with respect to the sale of electricity to consumers.” *LSP Transmission*, 329 F. Supp. 3d at 707. The court found that *Tracy*’s reasoning applies in the present case because LSP, as an unregulated transmission company, is not similarly situated to Minnesota’s regulated utilities and transmission companies—“the existing transmission line owners with a right of first refusal.” *Id.* at 708. The court thus concluded that the Minnesota ROFR law did not discriminate against LSP.

We do not, however, need to decide whether *Tracy* is applicable. If controlling, *Tracy* would only resolve the overt discrimination issue of the dormant Commerce Clause analysis, and the non-overt undue burden question would remain. We would have to consider the latter under the *Pike* balancing test. Therefore, accepting as true the allegation in the complaint that Minnesota-defined incumbent transmission owners and LSP are competitors, i.e., similarly situated, in the transmission expansion or development market, we address LSP’s arguments using the full dormant Commerce Clause analysis.

a. *Facial Discrimination*

“A statute ‘overtly discriminates’ if it is discriminatory on its face, in its purpose, or through its effects.” *R & M Oil & Supply, Inc. v. Saunders*, 307

F.3d 731, 734 (8th Cir. 2002) (quoting *U & I Sanitation*, 205 F.3d at 1067). “The burden to show discrimination rests on [LSP who is] challenging the validity of” Minnesota’s ROFR law. *Hughes v. Oklahoma*, 441 U.S. 322, 336 (1979). LSP asserts that the Minnesota law expressly grants a ROFR to in-state entities only and thus gives them impermissible preferential treatment “to build new MISO-approved transmission lines in Minnesota.” Appellant’s Br. at 25. LSP also argues that Minnesota’s ROFR provision is indistinguishable from the various “flow control” laws that this court and the Supreme Court have invalidated. *Id.* at 26-27 (citing *Ben Oehrleins & Sons & Daughter, Inc. v. Hennepin Cty.*, 115 F.3d 1372, 1376 (8th Cir. 1997) (affirming that provisions of county ordinance “prevent[ing] the delivery of County waste to out-of-state processors are unconstitutional”)).⁵ And according to LSP, the district court should not have disregarded its facial-discrimination claim on the basis that some of Minnesota’s incumbents with in-state operations are headquartered in other states. LSP claims, “What matters for purposes of determining whether an entity is in-state is not where it is headquartered, but whether it has a meaningful in-state presence.” Appellant’s Br. at 28.

LSP’s facial-discrimination claim fails. The district court concluded that Minnesota’s ROFR

⁵ LSP also cites two Supreme Court flow-control decisions, which include *C & A Carbone, Inc. v. Town of Clarkstown*, 511 U.S. 383 (1994); *Fort Gratiot Sanitary Landfill, Inc. v. Mich. Dep’t of Nat. Res.*, 504 U.S. 353 (1992). These cases do not involve interests that are comparably similar to the present case.

“statute draws a neutral distinction between existing electric transmission owners whose facilities will connect to a new line and all other entities, regardless of whether they are in-state or out-of-state.” *LSP Transmission*, 329 F. Supp. 3d at 708. We agree.

Minnesota’s ROFR law states, “An incumbent electric transmission owner has the right to construct, own, and maintain an electric transmission line that has been approved for construction in a federally registered planning authority transmission plan and connects to facilities owned by that incumbent electric transmission owner.” Minn. Stat. § 216B.246, subdiv. 2. The Minnesota law further defines an “[i]ncumbent electric transmission owner” as “any public utility that owns, operates, and maintains an electric transmission line in this state; any generation and transmission cooperative electric association; any municipal power agency; any power district; any municipal utility; or any transmission company.” *Id.* § 216B.246, subdiv. 1(c). Currently, incumbents in Minnesota include entities headquartered in Iowa, North Dakota, South Dakota, Wisconsin, and Minnesota. Many of these entities also own and operate facilities in states other than Minnesota.

LSP argues that the headquarters site for entities treated as Minnesota incumbents should be irrelevant to our discrimination analysis. Relying on our *Oehrleins* decision, LSP urges us to decide that these incumbents have meaningful Minnesota operations and, therefore, should be considered in-state entities who are not discriminated against by Minnesota’s ROFR provision. *See* 115 F.3d at 1386-87. LSP states

that the Minnesota law is per se invalid against out-of-state entities.⁶

We disagree. *Oehrleins* involved a county ordinance that required waste generated within the county to be transferred to facilities within that same county. This court rejected plaintiffs’ “‘market access’ theory” argument, which “assume[d] that an out-of-state concern that permanently locates an operation within the state is still an ‘out-of-state’ entity that can complain that a law that even-handedly restricts a local market is ‘discriminatory.’” *Id.* at 1386.

We further stated:

A Delaware corporation doing business in Minnesota could not argue that it is discriminated against by Minnesota laws that apply equally to all businesses operating in the state. South Dakota companies may cho[o]se not to locate operations in Minnesota because of comparatively high state taxes that apply to all businesses, but this is not discrimination under the Commerce Clause.

Id. at 1386-87. “It would be a different matter, of course, if the state were to treat a company

⁶ For additional support, LSP also cites to *Florida Transportation Services, Inc. v. Miami-Dade County*, 703 F.3d 1230, 1259 (11th Cir. 2012) (stating that the Commerce Clause demands a focus on “where [a] company’s business takes place or where its political influence lies”); and *Walgreen Co. v. Rullan*, 405 F.3d 50, 58 (1st Cir. 2005) (refusing to hold “that a favored group must be *entirely* in-state for a law to have a discriminatory effect on commerce”). These cases are distinguishable because they do not consider state regulation of certain matters relevant to transmission planning and expansion.

incorporated or principally located in another state differently from Minnesota companies on that basis.” *Id.* at 1387 n.13. Such is not the case here. Minnesota’s preference is for electric transmission owners who have existing facilities, and its law applies evenhandedly to all entities, regardless of whether they are Minnesota-based entities or based elsewhere.

In some instances, laws that restrain both intrastate and interstate commerce may be discriminatory. This is not such an instance. FERC continues to acknowledge “longstanding state authority over certain matters that are relevant to transmission planning and expansion, such as matters relevant to siting, permitting, and construction.” Order 1000 at 33 ¶ 107. The building of transmission lines inheres in the processes of siting, permitting, and constructing, which are integral to transmission planning and expansion. As the Supreme Court aptly stated, “We cannot . . . accept appellants’ underlying notion that the Commerce Clause protects the particular structure or methods of operation in a . . . market.” *Exxon Corp. v. Governor of Md.*, 437 U.S. 117, 127 (1978).

After reviewing the plain language of Minnesota’s ROFR law, we hold that this law is not facially discriminatory. LSP’s facial-discrimination claim fails.⁷

⁷ Appellees correctly note that it would be somewhat awkward to label a Minnesota law as discriminatory despite benefitting a company that has an operation in Minnesota but is principally located or headquartered elsewhere. Although briefly discussed in *Oehrleins*, we have not squarely addressed the issue of whether an entity that has an in-state presence but is

b. *Discriminatory Purpose*

“In determining whether a regulation has a discriminatory purpose, courts consider both direct and indirect evidence.” *IESI AR Corp.*, 433 F.3d at 604.

This includes: 1) statements by lawmakers; 2) the sequence of events preceding the [statute]’s adoption, including irregularities in the procedures; 3) the state’s consistent pattern of discriminating against, or disparately impacting, a particular class of persons; 4) the [statute]’s historical background, including whether it has been historically used to discriminate; and 5) the [statute]’s use of highly ineffective means to promote the legitimate interest asserted by the state.

Id. LSP, based on its complaint and public documents, posits that Minnesota’s ROFR provision has a discriminatory purpose. It cites the provision’s legislative history. LSP points to supporters’ hearing testimony and asserts that “Minnesota lawmakers openly sought to insulate incumbent transmission owners from competition introduced by Order No. 1000.” Appellant’s Br. at 36.

Appellees, on the other hand, contend that Minnesota’s “purpose in regulating electricity is to provide consumers ‘in . . . [Minnesota] with adequate and reliable services at reasonable rates.’”

headquartered elsewhere is considered an in-state entity for the purpose of dormant Commerce Clause review. We need not do so now.

Intervenors-Appellees' Br. at 47 (quoting Minn. Stat. § 216B.01). They also explain that the legislative history of the Minnesota ROFR law reveals that the Minnesota legislature previously considered alternatives to the statute but decided it was more appropriate to maintain its "longstanding, successful regulatory approach for selecting the owners and operators of transmission lines." *Id.*

Out of 16 incumbents, there are "eleven . . . headquartered in Minnesota" that also "own 16,229 miles, or 87 percent, of transmission line[s] in Minnesota." Compl. at 22, *LSP Transmission Holdings, LLC v. Swanson, et al.*, No. 0:17-cv-04490-DWF-HB (D. Minn. Sept. 29, 2017), ECF No. 1. LSP also states that the four largest owners—three of which are utilities—comprise at least "79 percent of transmission line assets in Minnesota." *Id.* at 23. This, along with the hearing testimony, reflects that Minnesota's ROFR law is not primarily aimed at protecting in-state interests but at maintaining a regulatory system that has worked and provided "adequate and reliable services at reasonable rates" to Minnesota residents. Intervenors-Appellees' Br. at 47 (quoting Minn. Stat. § 216B.01). Cost effective and reliable electricity transmission remains vital for efficient distribution to those residents.

Significantly, state police power includes regulating utilities. *Ark. Elec. Coop. Corp. v. Ark. Pub. Serv. Comm'n*, 461 U.S. 375, 377 (1983). Such state regulation inherently involves siting, permitting, and constructing transmission lines. Further, FERC has left such control to state authority and has not deemed that state ROFR laws use "highly ineffective means"

to accomplish the interests of states. The Seventh Circuit agreed when it denied LSP's petition for review against FERC. On this record, we cannot conclude that Minnesota's ROFR provision has a discriminatory purpose, and we affirm the district court's dismissal of LSP's discriminatory-purpose claim.

c. Discriminatory Effect

We now address whether Minnesota's ROFR law is discriminatory in its effect. "A regulation discriminates in effect if it favors in-state economic interests over out-of-state interests." *IESI AR Corp.*, 433 F.3d at 605. LSP claims that Minnesota's ROFR provision produces disproportionate, discriminatory effects because of the 16 incumbents, 11 are Minnesota-based, and only 5 are based elsewhere. Appellees respond by arguing that "nothing in § 216B.246 imposes any greater burden on out-of-state entities trying to enter the transmission-line market than it does on Minnesota entities—they are all excluded unless they own or buy the transmission facility in Minnesota to which the new transmission line will connect." Intervenor-Appellees' Br. at 45.

As discussed above, many of the incumbents that possess the ROFR under Minnesota's law are headquartered in Minnesota. These entities control most of the transmission lines in Minnesota. Three out of the four top majority owners are utilities. LSP's argument that disproportionate ownership by incumbents shows discriminatory effects misses the point. States have traditionally regulated utilities, and FERC continues to recognize the important role states play in regulating the siting, permitting, and

constructing of transmission lines as transmission needs are planned and expanded.

Minnesota's decision to allow entities other than utilities, such as independent transmission companies, to qualify as incumbents does not show an intent to favor in-state interests. If an entity does not already own an existing transmission facility in Minnesota, then it—whether a Minnesota or an out-of-state entity—faces the incidental hurdle that is placed by the Minnesota ROFR provision. If an incumbent owner chooses not to exercise its ROFR, for whatever reason, then other entities, including LSP, can seek approval and gain transmission facilities in Minnesota. Simply put, we discern no discriminatory effect.

2. Undue Burden

Because Minnesota's ROFR provision does not discriminate against out-of-state interests, we consider LSP's undue-burden claim. LSP contends that the Minnesota law violates the Commerce Clause under the *Pike* balancing test. "That test requires balancing a legitimate local public interest against its incidental burden on interstate commerce." *S. Union Co. v. Mo. Pub. Serv. Comm'n*, 289 F.3d 503, 508 (8th Cir. 2002). A law fails this balancing analysis when "the burden imposed on such commerce is clearly excessive in relation to the putative local benefits." *Pike*, 397 U.S. at 142.

LSP alleges that the state law is burdensome because it cannot compete for Minnesota's MISO-approved transmission projects. Additionally, it argues that the law has a negative aggregate effect because "if every state were to adopt a ROFR statute,

the cumulative effect of such statutes would nullify Order No. 1000's abolition of federal ROFRs and eliminate competition in the market." Appellant's Br. at 53. It further adds that the Minnesota law's purported benefits are speculative.

Conversely, Appellees argue that LSP alleges insufficient facts to sustain its substantial burden for asserting a *Pike* claim. They claim that "[n]one of the cases that LSP cites in its balancing analysis address any state interest comparable to the interest in regulating utilities."⁸ Intervenor-Appellees' Br. at 51. They also assert that if any federal action is warranted, Congress—not the courts—is best suited to take it.

Minnesota enacted its ROFR law, in part, in response to the uncertainty produced by FERC's Order 1000. Its goal was "to preserve the historically-proven status quo for the construction and maintenance of electric transmission lines." Defendants-Appellees' Br. at 34. This goal is within the purview of a State's legitimate interest in regulating the intrastate transmission of electric energy. *See* 16 U.S.C. § 824(b)(1). Put differently, "unlike the regulation of natural gas, a field in which FERC has jurisdiction both over pricing and over the siting of interstate lines, the states retain authority over the location and construction of electrical transmission lines." *Ill. Commerce Comm'n v. FERC*,

⁸ LSP cites *Pike*, 397 U.S. at 137; *Cotto Waxco Co. v. Williams*, 46 F.3d 790 (8th Cir. 1995); and *Pioneer Military Lending, Inc. v. Manning*, 2 F.3d 280 (8th Cir. 1993). Once more, the contexts and interests in the aforesaid cases are not analogous to that involved in the instant case.

721 F.3d 764, 773 (7th Cir. 2013) (internal citation omitted).

The second part of the *Pike* balancing test requires us to consider the burden imposed on interstate commerce. Minnesota's ROFR law could affect LSP's ability to build MISO-approved transmission lines in Minnesota. But from an aggregate standpoint, this record does not establish that the cumulative effect of state ROFR laws would eliminate competition in the market completely. Incumbents are not obligated to exercise their ROFRs, and some incumbents may not be obligated by their states' public utilities or service commissions to build federally-approved transmission lines. Moreover, FERC's Order 1000 did not eliminate the federal ROFR for incumbents not selected in regional transmission plans for purposes of cost allocation.

We also note that "the Supreme Court has rarely invoked *Pike* balancing to invalidate state regulation under the Commerce Clause." *S. Union Co.*, 289 F.3d at 509. Hence, we cannot say that the burden imposed by Minnesota's ROFR law is clearly excessive in relation to Minnesota's legitimate state interests in regulating its electric industry and maintaining the status quo. We, therefore, affirm the dismissal of LSP's undue-burden claim.

III. Conclusion

For the foregoing reasons, we affirm the district court's dismissal of LSP's complaint.

MEMORANDUM OPINION AND ORDER

INTRODUCTION

This matter involves a Constitutional challenge under the dormant Commerce Clause to Minnesota Statute § 216B.246, which grants incumbent electric utilities a right of first refusal to build and own electric transmission lines that connect to their existing facilities. Plaintiff LSP Transmission Holdings

(“LSP”) alleges that the statute discriminates against out-of-state transmission developers in favor of in-state utilities. Defendants¹ have filed separate motions to dismiss LSP’s lawsuit. (Doc. Nos. 18, 37 & 48.) For the reasons set forth below, the Court grants the motions.

BACKGROUND

This case involves electric generation, transmission, and delivery. Electricity is provided to consumers in three steps: (1) electricity is generated at various power plants; (2) electricity is transmitted on an integrated system of large power lines (“transmission lines”); and (3) electricity is then distributed to consumers through a network of smaller power lines (“distribution lines”). Electricity placed on transmission lines becomes part of an integrated, interstate system. State regulation of industries, such as the electrical industry, has long been recognized as a valid exercise of a state’s police powers. *See Munn v. Illinois*, 94 U.S. 113, 126 (1876) (explaining that state regulation of property that is used in a way that is of public consequence is a valid exercise of the state’s powers).

¹ Defendants include the named Commissioners of the Minnesota Public Utilities Commission (“PUC”), who have been sued in their official capacities, and the Commissioner of the Minnesota Department of Commerce (together, the “State Defendants”); Intervenor Defendant Northern States Power Company (“NSP”); and Intervenor Defendant ITC Midwest LLC (“ITC Midwest”). In addition, an amicus brief was filed by Great River Energy, Minnesota Power, Otter Tail Power Company, and Southern Minnesota Municipal Power Agency. (Doc. No. 25.)

The principal federal statute governing electricity generation and transmission is the Federal Power Act (“FPA”), which was enacted in 1935. The Federal Energy Regulatory Commission (“FERC”) exercises authority over the interstate transmission of electric energy and its sale at wholesale in interstate commerce. 16 U.S.C. § 824(b)(1). States retain jurisdiction over the retail sale of electric energy, as well as the “local distribution” and “transmission of electric energy in intrastate commerce.” *Id.* Under the FPA, states have traditionally assumed all jurisdiction over the approval or denial of permits for the siting and construction of electric transmission facilities. *See Piedmont Envtl. Council v. FERC*, 558 F.3d 304, 310 (4th Cir. 2009).

In Minnesota, electric service is provided by monopolies. Electric utilities are assigned to service areas. Minn. Stat. § 216B.37. Within the respective service areas, each utility has “the exclusive right to provide electric service at retail to each and every present and future customer in its assigned area and no [other] electric utility shall render or extend service at retail.” Minn. Stat. § 216B.40. In Minnesota, the PUC sets “just and reasonable” retail rates for public utilities. Minn. Stat. §§ 216B.03-.04, and .79. The PUC also ensures that each utility provides “safe, adequate, efficient, and reasonable service” and “make[s] adequate infrastructure investments.” *Id.*

FERC is empowered to “divide the country into regional districts for the voluntary interconnection and coordination of facilities for the generation, transmission, and sale of electric energy” and has the “duty” to “promote and encourage such

interconnection and coordination within each such district and between such districts.” 16 U.S.C. § 824a(a). Regionally, FERC-approved nongovernmental agencies, independent system operators (“ISO”s), oversee the operation and expansion of electric transmission grids. (Doc. No. 1 (“Compl.”) ¶ 14.) Each ISO issues a tariff, which establishes the terms by which its members build and operate grids. (*Id.* ¶ 15.) These tariffs are subject to the approval of FERC. (*Id.*) The Midcontinent Independent System Operator (“MISO”) is the regional planning entity that governs Minnesota.² (*Id.* ¶ 16.)

Prior to 2011, FERC gave incumbent utilities a federal right of first refusal (“ROFR”). Under this system, if MISO approved construction of a new electric transmission line, the MISO member that distributed electricity in the area where the facility was to be built had a ROFR. *Miso Transmission Owners v. FERC*, 819 F.3d 329, 332 (7th Cir. 2016). In 2011, however, FERC issued Order 1000, which eliminated the federal ROFR. *See Transmission Planning & Cost Allocation by Transmission Owning & Operating Pub. Utils.*, 136 FERC 61051, 2011 WL 2956837 (“Order 1000”) ¶7. *See also MISO Transmission Owners v. FERC*, 819 F.3d at 332. Order 1000 was consistent with the effort to manage electric grids on a regional level. *See Reg’l Transmission Orgs.*, 89 FERC ¶ 61285, ¶ 1, 1999 WL 33505505, at *3 (Dec. 20, 1999); *see also* 18 C.F.R. § 35.34. At the same time, Order 1000 recognized that states could continue to

² MISO also governs other states and the Canadian province of Manitoba. (Compl. ¶ 16.)

regulate electric transmission lines. (Order 1000 ¶ 107) (“We acknowledge that there is longstanding state authority of certain matters that are relevant to transmission planning and expansion, such as matters relevant to siting, permitting, and construction. However, nothing in this Final Rule involves an exercise of siting, permitting, and construction authority.”). FERC further explained:

In developing the framework below, we have sought to provide flexibility for public utility transmission providers in each region to propose, in consultation with stakeholders, how best to address participation by nonincumbents as a result of removal of the federal right of first refusal from Commission-jurisdictional tariffs and agreements. *However, we note that nothing in this Final Rule is intended to limit, preempt, or otherwise affect state or local laws or regulations with respect to construction of transmission facilities, including but not limited to authority over siting or permitting of transmission facilities.* Public utility transmission providers must establish this framework in consultation with stakeholders and we encourage stakeholders to fully participate.

Order 1000 ¶ 227 (emphasis added).

In accordance with Order 1000, MISO removed the federal ROFR provisions from its tariff. (Compl. ¶ 45.) Minnesota then enacted its own state ROFR

law, Minn. Stat. § 216B.246.³ Therefore, any new MISO-approved transmission project in Minnesota must comply with Minnesota’s ROFR law, which provides in part:

An incumbent electric transmission owner has the right to construct, own, and maintain an electric transmission line that has been approved for construction in a federally registered planning authority transmission plan and connects to facilities owned by that incumbent electric transmission owner.

Minn. Stat. § 216B.246, subd. 2. If a proposed line connects to more than one incumbent owner’s facilities, both owners will receive the right to build and operate the line “individually and proportionally” with other owner(s). *Id.* In addition, the statute authorizes the PUC to require an incumbent to build the electric transmission line, taking into consideration various issues, such as cost, efficiency, and reliability. *Id.*, subd. 3(b).⁴ Further, Minn. Stat. § 216B.246 defines an “incumbent electric transmission owner” as: “any public utility that owns, operates, and maintains an electric transmission line

³ In response to Order 1000, several states enacted their own ROFR laws. *See, e.g.*, N.D. Cent Code § 49-03-02.2; S.D. Codified Laws § 49-32-20; Neb. Rev. Stat. § 70-1028; 17 Okla. Stat. Ann. § 292.

⁴ Minn. Stat. § 216B.246 provides for a process by which incumbent owners have a window of time in which to notify the PUC whether they intend to exercise their ROFR; if an incumbent indicates that it does not wish to build the proposed line, it must explain the reason for its decision, and the PUC may override that decision and order the incumbent to build the line. *Id.*, subd. 3(b).

in this state; any generation and transmission cooperative electric associations; any municipal power agency; any power district; any municipal utility; or any transmission company” Minn. Stat. § 216B.246, subd. 1. Currently, “incumbents” in Minnesota include entities headquartered in Iowa, North Dakota, South Dakota, Wisconsin, and Minnesota. (Compl. ¶ 64(a)-(p).) Many of these entities also own and operate facilities in states other than Minnesota. *Id.*⁵

FERC approved MISO’s tariff, and in particular its decision to honor the state ROFR laws. *Midwest Indep. Transmission Sys. Operator, Inc.*, 150 FERC ¶ 61037, 2015 WL 285969, at ¶ 25. FERC explained that “even if a transmission project is subject to a state [ROFR], the regional transmission planning process still results in the selection for planning and cost allocation purposes of transmission projects that are more efficient or cost-effective than would have been developed but for such processes.” *Id.* ¶ 16.

⁵ The primary purpose of Minn. Stat. § 216B.246 was to preserve the status quo and avoid the uncertainty of a new process for electric transmission development in Minnesota after the Federal ROFR was eliminated. (Compl. ¶ 53 (bill was intended to “preserve the status quo”).) This purpose is reflected by the comments of Senator David Brown, one of the bill’s authors, at the Senate committee hearing on the ROFR bill: “Our regulated system has served Minnesota well, and our system is reliable and our rates are fairly competitive. . . . If we choose not to pass this legislation, we are moving into the world of the unknown versus we have a very known process right now, members. And I think it’s best to stick with that process. . . .” (Doc. No. 22 (“Peick Aff.”) ¶ 2, Ex. A, Statement of Senator Brown at 00:28 & 49:21.) The Court takes judicial notice of these comments.

LSP objected to FERC's ruling, arguing that FERC should preclude states from enacting ROFR laws. *Id.* ¶ 24. FERC held that "it is appropriate for MISO to recognize state or local laws or regulations as a threshold matter in the regional transmission planning process." *Id.* ¶ 25. FERC explained that Order 1000 "struck an important balance between removing barriers to participation by potential transmission providers in the regional transmission planning process and ensuring the nonincumbent transmission developer reforms do not result in the regulation of matters reserved to the states." *Id.* ¶ 27. LSP then sought judicial review of FERC's ruling and again argued that FERC should not have allowed MISO to implement state ROFR laws. *MISO Transmission Owners*, 819 F.3d at 336. The Seventh Circuit Court of Appeals rejected LSP's argument and held that it was a "proper goal" for FERC "to avoid intrusion on the traditional role of the States' in regulating the siting and construction of transmission facilities." *Id.* The Seventh Circuit also explained that Order 1000 terminated the federal, not any state, right of first refusal. *Id.* ("Order No. 1000 terminated only federal rights of first refusal; it did not 'limit, preempt, or otherwise affect state or local laws or regulations with respect to construction of transmission facilities.'").

This case involves the Huntley-Wilmarth line, a proposed 345 kilovolt electric transmission line that is proposed to run approximately 40 miles, wholly within Minnesota. The Huntley-Wilmarth line will connect two substations—NSP's existing Wilmarth substation north of Mankato, Minnesota and ITC Midwest's Huntley substation, which is currently under

construction, south of Winnebago, Minnesota. (Compl. ¶ 70; Doc. No. 40 (“Zylstra Decl.”) ¶ 4, Ex. C (Notice of Intent) at 1.)⁶ On March 3, 2017, after the Huntley-Wilmarth line was approved, NSP and ITC Midwest jointly exercised their rights of first refusal under § 216B.246. In their Notice of Intent to the Commission, NSP and ITC Midwest gave formal notice that they “intend to construct, own and maintain the Huntley-Wilmarth 345kv transmission line project to be located in south central Minnesota.” (Notice of Intent at 1.) NSP and ITC Midwest also filed their Notice Plan on June 30, 2017. (Zylstra Decl. ¶ 4, Ex. D.) The project is scheduled to be complete by January 1, 2022. (Compl. ¶ 72.)

On September 29, 2017, LSP filed the present lawsuit challenging the constitutionality of Minn. Stat. § 216B.246. LSP argues that Minnesota’s ROFR law violates the dormant Commerce Clause of the United States Constitution. (*See generally* Compl.) Specifically, Plaintiff alleges that Minn. Stat. § 216B.246 facially discriminates, or discriminates in purpose or effect, against interstate commerce in the construction and ownership of large transmission facilities because it (1) gives “incumbent utilities with an existing footprint in Minnesota the exclusive right of first refusal to build transmission lines,” and (2) effectively prohibits LSP and other out-of-state participants from building transmission lines in Minnesota. (Compl. ¶¶ 85-86.) LSP also alleges that, even if Minn. Stat. § 216B.246 is not discriminatory, it imposes an undue burden on interstate commerce. (*Id.*

⁶ The Court considers the Notice of Intent because it is embraced by the Complaint.

¶¶ 91-92.) Defendants move to dismiss LSP's complaint for failure to state a claim.

DISCUSSION

I. Statement of Interest

On April 13, 2018, the U.S. Government filed a Statement of Interest on Behalf of the United States of America. (Doc. No. 70.) The Government's statement was filed by the Justice Department's Antitrust Division. The Court allowed the parties to respond to the Statement of Interest. (Doc. Nos. 72-76.) As aptly noted by NSP and ITC Midwest, the Antitrust Division's statement is untimely, as it was filed roughly two and one-half months after briefing was completed. Moreover, the Antitrust Department offers no explanation, let alone good cause, for its delay. It is solely within the Court's discretion to permit or deny a statement of interest. *See Creedle v. Gimenez*, Civ. No. 17-22477, 2017 WL 5159602, at *2 (S.D. Fla. Nov. 7, 2017). In exercising that discretion, the Court can consider whether the information is timely, useful, or otherwise necessary to the administration of justice. *Id.* In light of the Antitrust Division's unjustified delay and the fact that this case has been fully and thoroughly briefed by all other parties, the interests of justice do not require the Court to consider the Statement of Interest. Accordingly, the Court declines to consider the Statement of Interest. However, the Court has reviewed the statement and notes that consideration of the statement would not alter the Court's decision.

II. Legal Standard

In deciding a motion to dismiss under Rule 12(b)(6), a court assumes all facts in the complaint to

be true and construes all reasonable inferences from those facts in the light most favorable to the complainant. *Morton v. Becker*, 793 F.2d 185, 187 (8th Cir. 1986). In doing so, however, a court need not accept as true wholly conclusory allegations, *Hanten v. Sch. Dist. of Riverview Gardens*, 183 F.3d 799, 805 (8th Cir. 1999), or legal conclusions drawn by the pleader from the facts alleged, *Westcott v. City of Omaha*, 901 F.2d 1486, 1488 (8th Cir. 1990). A court deciding a motion to dismiss may consider the complaint, matters of public record, orders, materials embraced by the complaint, and exhibits attached to the complaint. *See Porous Media Corp. v. Pall Corp.*, 186 F.3d 1077, 1079 (8th Cir. 1999).

To survive a motion to dismiss, a complaint must contain “enough facts to state a claim to relief that is plausible on its face.” *Bell Atl. Corp. v. Twombly*, 550 U.S. 544, 570 (2007). Although a complaint need not contain “detailed factual allegations,” it must contain facts with enough specificity “to raise a right to relief above the speculative level.” *Id.* at 555. As the Supreme Court reiterated, “[t]hreadbare recitals of the elements of a cause of action, supported by mere conclusory statements,” will not pass muster under *Twombly*. *Ashcroft v. Iqbal*, 556 U.S. 662, 678 (2009) (citing *Twombly*, 550 U.S. at 555). In sum, this standard “calls for enough fact[s] to raise a reasonable expectation that discovery will reveal evidence of [the claim].” *Twombly*, 550 U.S. at 556.

III. Commerce Clause

The Commerce Clause expressly authorizes Congress’s power to regulate interstate commerce. U.S. Const. Art. I, § 8, cl. 3. The Commerce Clause has

a negative or dormant implication as well, prohibiting states from enacting laws that discriminate or unduly burden interstate commerce. *Gen. Motors Corp. v. Tracy*, 519 U.S. 278, 287 (1997) (“*Tracy*”); *Quill Corp. v. North Dakota*, 504 U.S. 298, 312 (1992). State laws invite scrutiny under the dormant Commerce Clause if they mandate “differential treatment of in-state and out-of-state economic interests that benefits the former and burdens the latter.” *Granholm v. Heald*, 544 U.S. 460, 472 (2005) (citation omitted). The rationale behind the dormant Commerce Clause is to prohibit economic protectionism, or state “regulatory measures designed to benefit in-state economic interests by burdening out-of-state competitors.” *Associated Indus. of Mo. v. Lohman*, 511 U.S. 641, 647 (1994) (citation omitted). *See also S. Union Co. v. Mo. Pub. Serv. Comm’n*, 289 F.3d 503, 508 (8th Cir. 2002) (citation omitted) (noting the rationale behind the dormant Commerce Clause).

When determining if a state law violates the dormant Commerce Clause, the Court uses a two-step inquiry. First, the Court asks whether the law overtly discriminates against interstate commerce. *R&M Oil & Supply, Inc. v. Saunders*, 307 F.3d 731, 734 (8th Cir. 2002). A state law “overtly discriminates” if it is discriminatory on its face, in its purpose, or in its effects. *Id.* In such a case, the state law “will be invalidated unless the state can show, under rigorous scrutiny, that it has no other means to advance a legitimate local interest.” *IESI AR Corp. v. Nw. Ark. Reg’l Solid Waste Mgmt. Dist.*, 433 F.3d 600, 604 (8th Cir. 2006); *see also C&A Carbonne, Inc. v. Town of Clarkstown*, 511 U.S. 383, 392 (1994). If the state law is not overtly discriminatory, the Court moves to the

second tier of the analysis. Under this tier, known as the *Pike*-test, even if a statute regulates evenhandedly to effectuate a legitimate, local public interest, the Court will ask if the law imposes a burden on interstate commerce that “is clearly excessive in relation to its putative local benefits.” *Pike v. Bruce Church, Inc.*, 397 U.S. 137, 142 (1970). The burden of demonstrating that a state law discriminates against interstate commerce “rests on the party challenging the validity of the statute.” *Hughes v. Okla.*, 441 U.S. 322, 336 (1979). The Eighth Circuit has noted (citing Supreme Court precedent) that courts exercise caution in reviewing state utility regulations under the dormant Commerce Clause, and explained that “regulation of utilities is one of the most important of the functions traditionally associated with the police power of the States.” *S. Union Co.*, 289 F.3d at 508 (quotation omitted).

Plaintiff argues that Minn. Stat. § 216B.246 both overtly discriminates and fails the *Pike* test. Defendants, on the other hand, argue that Minn. Stat. § 216B.246 is an evenhanded, non-discriminatory state public-utility regulation that is presumptively valid under the dormant Commerce Clause. Defendants contend that the Supreme Court’s decision in *Tracy* is dispositive and forecloses LSP’s discrimination claim. Defendants also point out the long history of judicial deference to utility regulation and contend that Minnesota has made a reasonable determination that the entities that own the facilities to which new lines would connect are best positioned to ensure the reliable delivery of power to Minnesota consumers. In addition, Defendants argue that Minnesota’s interest in regulating the provision of

electricity to its citizens outweighs any indirect effects on interstate commerce.

A. *General Motors Corp. v. Tracy*

As an initial matter, the parties dispute the proper application of the Supreme Court's decision in *Tracy*. Defendants argue that *Tracy* forecloses LSP's claim of discrimination. LSP, on the other hand, argues that *Tracy* is inapposite and that Defendants misconstrue and attempt to overextend the decision in *Tracy*.

In *Tracy*, the Supreme Court reviewed an Ohio statute that granted a tax exemption on retail sales and use of natural gas to in-state regulated public utilities and denied the same tax exemption to interstate natural gas transmission companies. *Id.* at 281-82. General Motors, a purchaser of natural gas from out-of-state marketers whose sales were subject to the taxes, challenged the tax exemption under the dormant Commerce Clause, arguing that the exemption discriminated against interstate commerce. *Id.* at 297-98. The Supreme Court considered the threshold issue of whether the Ohio statute applied to "substantially similar entities." *Id.* at 298 ("Conceptually, of course, any notion of discrimination assumes a comparison of substantially similar entities."). This inquiry is important because, as noted by the Supreme Court, if a statute distinguishes between "different entities" serving "different markets," there would be no discrimination. *Id.* at 299. More specifically, if the entities are not "substantially similar," then "eliminating the tax or other regulatory differential would not serve the dormant Commerce Clause's fundamental objective of

preserving a natural market for competition undisturbed by preferential advantages conferred by a State upon its residents or resident competitors.” *Id.*

In *Tracy*, the Supreme Court found that in-state gas utilities served residential consumer end-users through monopolies that exist independent of the state statute at issue. *Id.* at 297-98, 302-03. In contrast, interstate companies—out-of-state marketers whose sales were subject to the taxes—did not serve those residential consumers. Thus, with respect to sales to consumers in these monopolies, the local gas utilities and the out-of-state marketers were not similarly situated because they did not compete. *Id.* at 302-03. As to the sales to the consumers, the dormant Commerce Clause had “no job to do.” *Id.* at 303.

The Supreme Court, however, also considered the sale of natural gas to industrial consumers. *Id.* With respect to these sales, the Supreme Court noted the “possibility of competition” between the local utilities and private businesses, and therefore also a possibility of a dormant Commerce Clause violation. *Id.* The Supreme Court asked whether “we should accord controlling significance to the noncaptive market in which they compete, or to the noncompetitive, captive market in which the local utilities alone operate?” *Id.* at 303-04. Despite the possibility of competition in the noncaptive market, the Supreme Court held that the state was justified in treating the utilities differently in both markets. The Supreme Court held that it would give controlling weight to the captive, monopoly market:

First and most important, we must recognize an obligation to proceed cautiously lest we imperil the delivery by regulated [utilities] of bundled gas to the noncompetitive captive market. Second, as a Court we lack the expertness and the institutional resources necessary to predict the effects of judicial intervention invalidating Ohio's tax scheme on the utilities' capacity to serve this captive market. Finally, should intervention by the National Government be necessary, Congress has both the resources and the power to strike the balance between the needs of the competitive market and captive markets.

Id. at 304. The Court went on to explain that “[w]here a choice is possible . . . the importance of traditional regulated service to the captive market makes a powerful case against any judicial treatment that might jeopardize [the utilities’] continuing capacity to serve the captive market.” *Id.* The Supreme Court further reasoned that:

[the state’s] regulatory response to the needs of the local natural gas market has resulted in a noncompetitive bundled gas product that distinguishes its regulated sellers from independent marketers to the point that the enterprises should not be considered ‘similarly situated’ for purposes of facial discrimination under the Commerce Clause.

Id. at 310. The Supreme Court in *Tracy* held that the Ohio statute did not discriminate against interstate

commerce and did not run afoul of the dormant Commerce Clause.⁷

In a recent decision, the Second Circuit Court of Appeals applied *Tracy* when considering a dormant Commerce Clause challenge to a Connecticut program that distinguished between in-state and out-of-state entities in the electricity market. The Connecticut program required state electric utilities to either produce renewable energy or to purchase renewable energy credits from “renewable energy producers located in the region.” *Allco Fin. Ltd. v. Klee*, 861 F.3d 82, 86 (2d Cir. 2017). Despite there being a national market for renewable energy credits, the court found that the state program advanced legitimate interests in the local market. *Id.* (noting that the program promotes increased production of renewable power generation in the region and, by extension, the protection of its citizens’ health, safety, and reliable access to power). The court also noted that FERC had established a regional market (and geographic boundaries), and that FERC’s involvement weighed strongly against intervention by the court. *Id.* (noting FERC and Congress are better-situated to supervise and determine economic and health and safety effects

⁷ Other Supreme Court decisions have acknowledged that local utilities with monopolies are not similarly situated to private businesses when analyzing the dormant Commerce Clause. *See, e.g., United Haulers Ass’n, Inc. v. Oneida-Herkimer Solid Waste Mgmt. Auth.*, 550 U.S. 330, 342-43 (2007) (citing *Tracy*); *Levin v. Commerce Energy, Inc.*, 560 U.S. 413, 429 n.9 (2010) (citing *Tracy*); *Camps Newfound/Owatonna, Inc. v. Town of Harrison*, 520 U.S. 564, 607 (1997) (Scalia, J., dissenting) (observing that *Tracy* “effectively creates what might be called a ‘public utilities’ exception to the negative Commerce Clause”).

of geographic boundaries). The Second Circuit held that the “means and ends” that Connecticut selected in its renewable energy credit program were “well within the scope of what Congress and FERC have traditionally allowed the States to do in the realm of energy regulation.” *Id.* at 106.

After careful analysis, the Court concludes that the reasoning behind the dismissal of the dormant Commerce Clause challenge in *Tracy* applies to the present case. Minn. Stat. § 216B.246 is part of the Minnesota’s broader regulation of the provision of electricity to the consumer market. Many of the entities that own existing transmission facilities are regulated public utilities, who serve captive markets and have monopolies with respect to the sale of electricity to consumers. Thus, for these sales, there is no competition and the dormant Commerce Clause does not apply. *See, e.g., Tracy*, 519 U.S. at 303. However, the Court recognizes that local utilities in Minnesota and out-of-state entities may compete for the right to build transmission lines. In this case, LSP alleges that it wishes to compete against Minnesota electric utilities for the right to build transmission lines, but that it is being discriminated against by Minn. Stat. § 216B.246. (Compl. ¶¶ 75-78.) Under *Tracy*, however, the Court grants controlling weight to the monopoly market. Minnesota is entitled to consider the effect on the public utilities and the consumers that the utilities serve and “to give the greater weight to the captive market and the local utilities’ singular role in serving it.” *Tracy*, 519 U.S. at 304. Moreover, like in *Tracy*, where the Supreme Court determined that the possibility of a negative impact on the ability of utilities to serve consumers in

the monopoly market weighed against invalidating the challenged statute, the same holds true here. *Tracy*, 519 U.S. at 309. The reasons cited in support of giving greater weight to the monopoly market in *Tracy* apply here; namely, to avoid any jeopardy or disruption to the service of electricity to the state electricity consumers and to allow for the provision of a reliable supply of electricity.

In addition, as was the case in *Tracy*, the economic consequences of any Court intervention to strike down Minn. Stat. § 216B.246 are unclear. *Id.* at 307. Under Minn. Stat. § 216B.46, Minnesota not only gives existing owners a right of first refusal to build new transmission lines that will connect to their existing facilities, but in return Minnesota also places extensive regulatory burdens on those owners. Any intervention by the Court could upset the balance between those burdens and regulation. Importantly, Congress and FERC have both indicated that Minnesota is entitled to make the policy decision to adopt a right of first refusal to build new transmission lines. And as it has been noted many times before, Congress, FERC, and the Minnesota legislature are “better-situated than the courts” to “determine the economic wisdom and the health and safety effects” of a decision on the correct balance between competition and a right of first refusal in the area of the building of electric transmission facilities. *See, e.g., Allco*, 861 F.3d at 107. The Court, therefore, properly defers to their judgment.

The Court has considered, but is not persuaded by, LSP’s arguments that *Tracy* is inapposite. First, LSP argues that Minn. Stat. § 216B.246 does not

single out providers that serve retail consumers as the sole beneficiaries of the statute’s protection, but instead that it protects all transmission owning entities in Minnesota. This distinction, however, is not persuasive. While it is true that Minn. Stat. § 216B.246 relates to transmission lines, the main principle of *Tracy*—that there cannot be discrimination between entities that are not similarly situated—applies here. Regulated utilities (the existing transmission line owners with a right of first refusal) are not similarly situated with unregulated entities such as LSP. *See id.* at 298-99. Second, LSP argues that the Court is not required to defer to Minnesota’s policy decision, and in particular because this case, unlike in *Tracy*, does not involve a tax law (and its “subtle complexities”). The Supreme Court in *Tracy*, however, explained that the dormant Commerce Clause “prohibits state taxation *or regulation* that discriminates against or unduly burdens interstate commerce.” 519 U.S. at 287 (emphasis added). The relevant case law does not demand that tax statutes receive greater deference than regulatory statutes under the Commerce Clause.

For all of the above reasons, the Court concludes that *Tracy* forecloses LSP’s allegation that Minn. Stat. § 216B.246 overtly discriminates against out-of-state transmission developers.

B. Overt Discrimination

Even if LSP’s claim of overt discrimination was not foreclosed by *Tracy*, LSP’s argument that Minn. Stat. § 216B.246 facially discriminates because it grants incumbents the right to build federally approved transmission line projects in Minnesota

fails. There is no dispute that the statute grants a preference to “incumbent electric transmission owners,” but that preference does not discriminate against out-of-state entities. Instead, it affords companies whose facilities will connect to new transmission lines the first chance to build the new line. The statute’s preference does not apply to all incumbent electric transmission owners, but only to those directly connected to the proposed line, whether those incumbents are in-state or out-of-state. The statute draws a neutral distinction between existing electric transmission owners whose facilities will connect to a new line and all other entities, regardless of whether they are in-state or out-of-state. In fact, the Complaint lists the sixteen entities that would qualify as incumbents under Minn. Stat. § 216B.246, and five of those entities are headquartered outside of Minnesota. (Compl. ¶¶ 64-66; Doc. No. 39 at 26-27.)

In response, LSP argues that any owner of a transmission facility in Minnesota, regardless of their actual headquarters, should be considered “in-state.” The Court disagrees. Incumbency bias is not the same as discrimination against out-of-state interests. *See Colon Health Ctrs. of Am., LLC v. Hazel*, 813 F.3d 145, 154 (4th Cir. 2016) (explaining that an incumbent recipient of a state benefit is not necessarily an “in-state resident”). Here, out-of-state companies can benefit from Minn. Stat. § 216B.246 on the same terms as a Minnesota company.

For the above reasons, the Court concludes that LSP has failed to demonstrate that Minn. Stat.

§ 216B.246 discriminates against out-of-state entities.⁸

C. *Pike* Test

LSP argues that even if Minn. Stat. § 216B.246 regulates evenhandedly, it violates the Commerce Clause under the *Pike* balancing test. Specifically, LSP claims that Minn. Stat. § 216B.246 “unduly burdens interstate commerce by restricting entry to the transmission market in Minnesota, thus walling the state from new market participants.” (Compl. ¶ 91.) Even where a law does not patently discriminate, it may still be invalid under the dormant Commerce Clause if its burden on interstate commerce is “clearly excessive in relation to the putative local benefits.” *S. Union*, 289 F.3d at 507 (quoting *Pike*, 397 U.S. at 142). The *Pike* test requires the balancing of a legitimate public interest against any incidental burdens on interstate commerce.

Minnesota has a strong and well-recognized interest in regulating the market for electricity that serves its citizens. *See, e.g., Ark. Elec. Coop Corp. v. Ark. Pub. Serv. Comm’n*, 461 U.S. 375, 377 (1983) (“[t]he regulation of utilities is one of the most important functions traditionally associated with the police powers of the States”). Minnesota also has a long history of regulating both the construction and operation of transmission facilities. *See N.D. v. Heydinger*, 825 F.3d 912, 922 (8th Cir. 2016). The Minnesota legislature decided to create a right of first refusal as part of its broader scheme regulating

⁸ LSP has also failed to meet its burden to demonstrate that Minn. Stat. § 216B.246 has a discriminatory purpose or effect.

utilities. Courts have upheld similar statutes in the face of dormant Commerce Clause challenges. *See, e.g., S. Union*, 289 F.3d at 509. Indeed, the benefits of utility regulation have been presumed by courts. *See id.* (noting that “local public utility rate regulation is presumptively valid”). And courts have consistently noted that legislatures are uniquely positioned to make determinations regarding the “health, life, and safety” of their citizens, even if state legislation might indirectly affect commerce. *Tracy*, 519 U.S. at 306. In enacting Minn. Stat. § 216B.246, the Minnesota legislature determined that it is necessary to provide “the retail consumers of natural gas and electric service in this state with adequate and reliable services at reasonable rates,” and that the legislation was necessary “to avoid unnecessary duplication of facilities which increase the cost of service to the consumer” and “to minimize disputes between public utilities which may result in inconvenience or diminish efficiency in service to the consumers.” Minn. Stat. § 216B.01. The Court concludes that Minnesota has demonstrated a strong interest in enacting Minn. Stat. § 216B.246 and various resulting benefits.

Turning to the second prong, the Court balances the local benefits of Minn. Stat. § 216B.246 with any incidental burden that the statute places on interstate commerce. LSP argues that the cumulative effect of individual states’ right-of-first-refusal laws would nullify Order 1000’s abolition of federal right-of-first-refusal laws and undermine its goals by effectively eliminating competition for transmission line projects. LSP asserts that giving incumbents the right of first refusal would eliminate competitive bidding for these projects and would place a significant burden on

interstate commerce. Moreover, LSP contends that Minn. Stat. § 216B.246 burdens LSP individually by effectively barring it from competing via the FERC-approved process for regionally planned projects approved for construction in Minnesota. Finally, LSP asserts that the nature of the *Pike* balancing test is fact-intensive, making any decision premature.

As explained above, Minn. Stat. § 216B.246 does not provide a preference to in-state companies. Instead, it gives a right of first refusal to companies (in-state or out-of-state) whose facilities will connect to the proposed transmission line. Any incidental effects on interstate commerce caused by giving existing facilities a right of first refusal are insufficient to outweigh the significant local interest described above. *See, e.g., Ark. Elec. Coop. Corp.*, 461 U.S. at 395. In *Tracy*, the Supreme Court explains that “there is no clear line between [the] two strands of analysis”—facial discrimination and the “so-called *Pike* undue burden test.” *Tracy*, 519 U.S. at 298 n.12. The Supreme Court also noted the narrow application of the *Pike* test:

Nonetheless, a small number of our cases have invalidated state laws under the dormant Commerce Clause that appear to have been genuinely nondiscriminatory, in the sense that they did not impose disparate treatment on similarly situated in-state and out-of-state interests, where such laws undermined a compelling need for national uniformity in regulation.

Id. Here, LSP has not shown that Minn. Stat. § 216B.246 undermines a compelling need for national

uniformity. In fact, FERC, the agency charged by Congress with ensuring national regulation of electric markets, expressly approved the use of state right-of-first-refusal laws. *Midwest Indep. Transmission Sys. Operator, Inc.*, 150 FERC ¶ 61037 at 18. FERC explained that it had “struck an important balance” between promoting competition and allowing the continued “regulation of matters reserved to the states.” 150 FERC at 61166 ¶ 27. In its Complaint, LSP acknowledges that FERC’s rules are not intended to override transmission siting decisions by the state and that FERC approved a provision in the MISO tariff that incorporates Minnesota’s right-of-first refusal. (Compl. ¶¶ 44-45.) Where Congress and FERC have endorsed the state’s role, a regulation will pass the *Pike* test if it was enacted in a “legitimate state pursuit.” *Allco*, 861 F.3d at 108.

After balancing under the *Pike* test, the Court concludes that any burden on interstate commerce is outweighed by the benefits of Minnesota’s right-of-first-refusal statute. Moreover, the Court notes that economic and free market arguments are better left to legislators. *See Colon Health Ctrs.*, 813 F.3d at 158.

For all of the above reasons, the Court determines that Minn. Stat. § 216B.246 does not violate the dormant Commerce Clause. LSP’s Complaint is, therefore, dismissed.

ORDER

Based upon the foregoing, and the files, records, and proceedings herein, **IT IS HEREBY ORDERED** that Defendants’ Motions to Dismiss (Doc. Nos. [18, 37, 48]) are **GRANTED** and Plaintiff’s Complaint (Doc. No. [1]) is **DISMISSED WITH PREJUDICE**

App-49

**LET JUDGMENT BE ENTERED
ACCORDINGLY.**

Appendix D

RELEVANT STATUTORY PROVISIONS

**Minn. Stat. § 216B.246. Federally approved
transmission lines; incumbent transmission
lineowner rights**

Subdivision 1. Definitions. (a) For purposes of this section, the terms defined in this subdivision have the meanings given them.

(b) “Electric transmission line” means a high-voltage transmission line with a capacity of 100 kilovolts or more and associated transmission facilities.

(c) “Incumbent electric transmission owner” means any public utility that owns, operates, and maintains an electric transmission line in this state; any generation and transmission cooperative electric association; any municipal power agency; any power district; any municipal utility; or any transmission company as defined under section 216B.02, subdivision 10.

Subd. 2. Incumbent electric transmission owner rights. An incumbent electric transmission owner has the right to construct, own, and maintain an electric transmission line that has been approved for construction in a federally registered planning authority transmission plan and connects to facilities owned by that incumbent electric transmission owner. The right to construct, own, and maintain an electric transmission line that connects to facilities owned by two or more incumbent electric transmission owners belongs individually and proportionally to each incumbent electric transmission owner, unless

otherwise agreed upon in writing. This section does not limit the right of any incumbent electric transmission owner to construct, own, and maintain any transmission equipment or facilities that have a capacity of less than 100 kilovolts.

Subd. 3. Commission procedure. (a) If an electric transmission line has been approved for construction in a federally registered planning authority transmission plan, the incumbent electric transmission owner, or owners if there is more than one owner, shall give notice to the commission, in writing, within 90 days of approval, regarding its intent to construct, own, and maintain the electric transmission line. If an incumbent electric transmission owner gives notice of intent to build the electric transmission line then, unless exempt from the requirements of section 216B.243, within 18 months from the date of the notice described in this paragraph or such longer time approved by the commission, the incumbent electric transmission owner shall file an application for a certificate of need under section 216B.243 or certification under section 216B.2425.

(b) If the incumbent electric transmission owner indicates that it does not intend to build the transmission line, such notice shall fully explain the basis for that decision. If the incumbent electric transmission owner, or owners, gives notice of intent not to build the electric transmission line, then the commission may determine whether the incumbent electric transmission owner or other entity will build the

electric transmission line, taking into consideration issues such as cost, efficiency, reliability, and other factors identified in this chapter.

Minn. Stat. § 216B.02, subd. 10

* * *

Subd. 10. Transmission company. “Transmission company” means persons, corporations, or other legal entities and their lessees, trustees, and receivers, engaged in the business of owning, operating, maintaining, or controlling in this state equipment or facilities for furnishing electric transmission service in Minnesota, but does not include public utilities, municipal electric utilities, municipal power agencies, cooperative electric associations, or generation and transmission cooperative power associations.
