

Declaration of Professor of Mathematics, Steven J Miller, Ph.D.

1. My name is Steven J. Miller. I am over 18 years of age and am competent to testify in this action. All of the facts stated herein are true and based on my personal knowledge.

2. I received a B.S. in Mathematics and Physics from Yale University in 1996 and a Ph.D of Mathematics from Princeton University in 2002. I have published numerous papers and written several books on statistical topics, and have taught probability and statistics for the past 15 years.

3. I am currently a professor of mathematics at Williams College. I make this declaration in my personal capacity.

4. I have analyzed phone bank data provided to me regarding responses to questions relating to mail ballot requests, returns and related issues.

5. I evaluated the data provided and performed a statistical evaluation of the data and various related calculations. I provide this declaration with regard to the report presenting my findings.

6. I can show, to a reasonable degree of professional certainty, that the conclusions as stated in this report are correct.

I declare under the penalty of perjury that the foregoing is true and correct.

Steven J Miller, Ph.D. November 17, 2020

REPORT ON PA GOP ABSENTEE BALLOT REQUESTS

Steven J Miller, Professor of Mathematics
Williams College, Williamstown, MA 01267
sjm1@williams.edu, 617-835-3982

EXECUTIVE SUMMARY

The analysis was performed on a data set provided by Matt Braynard and his firm, Election Data Services.

- *Estimate of ballots requested in the name of a registered Republican by someone other than that person: 40,875 to 53,909.*
- *Estimate of Republican ballots that the requester returned but were not counted: 48,522 to 44,892 (these go in the opposite order as the previous: if more of the ballots are requested by someone other than the registered voter, that means there are fewer ballots left that we estimate were incorrectly returned.).*

Thus I estimate that the number of ballots that were either requested by someone other than the registered Republican or requested and returned but not counted range from 89,397 to 98,801.

Doing a more detailed analysis with confidence intervals, I estimate that almost surely (based on the data I received) that the number of ballots requested by someone other than the registered Republican is between 37,001 and 58,914, and almost surely the number of ballots requested by registered Republicans and returned but not counted is in the range from 38,910 to 56,483.

Respectfully submitted,

Steven J Miller

November 17, 2020

DETAILED ANALYSIS

I received a data set of responses to a phone survey given to people who are registered Republicans in PA. These people were contacted because there was a ballot requested in their name for the November 2020 election, but the ballot has not arrived to be counted as of November 16th, 2020; **there are 165,412 such ballots.**

Almost 20,000 people were called; most of the calls went to answering machines (around 14,000), had people refuse to talk (around 3000), or there was a bad number / language barrier (about 3500). There were 2684 people who answered the call on November 9th or 10th, saying either they were the person asked for or wanting to know what the call was about. These respondents were then asked several questions.

The first question was whether or not they had requested an absentee ballot; 1114 said they did, and 36 were a household member confirming the ballot request. **Thus 1150 of the 2684 confirmed requesting a ballot.** A sizeable number said they did not request a ballot: 531 said they did not while another 25 were a household member stating no absentee ballot was requested. **This sums to 556 people confirming that no ballot was requested.** Of the remaining 978 people, 343 either hung up, refused to talk, or said the person asked for is not available to talk; these 343 people were not asked subsequent questions, though there were also 91 people who said they were unsure if they had requested a ballot were asked the next question. **The remaining 544 people answered that they voted in person** and were not asked any additional questions; this response complicates the analysis as you cannot vote in person if you requested a ballot unless you bring the ballot to be cancelled. From the response 'voted in person at the polls' it is unclear if they requested an absentee ballot; we will thus do the analysis assuming they all requested and assuming none of them requested.

We have 1241 people moving on to Question 3 (those who answered yes, had a family member answer yes, or were unsure). Of these, **463 mailed back their ballot** (though there is no record of their ballot being received; 452 said they mailed back their ballot and 11 were family members saying it was mailed) and **643 said they had not mailed back their ballot** (632 said they had not, 11 had family members say it was not mailed). The remaining people were unsure, refused to speak, hung up, or were not the right person.

Our goal is to try to estimate the number of fraudulent ballots in PA from these responses, and thus correct the totals across the commonwealth. We start with the 165,412 people who were recorded as having requested a ballot but no ballot had arrived. From Question 2 there were 1150 who confirmed requesting a ballot and 556 who did not (this is ignoring the 91 who were unsure and the 544 who said they voted in the polls). Thus we have 556 out of 1706 who said they did not request a ballot but one was requested in their name, which is about 32.59%. If we multiply the 165,412 ballots requested but unreturned by 32.59%, we get about 53,909 ballots. **Thus we estimate there are almost 54,000 ballots in the commonwealth that were requested by someone other than the registered Republican in whose name it was.**

What if we include the 544 people who answered Question 2 by saying they voted in person at the polls? If we assume all of these people brought their ballots with them to be voided, this raises the denominator from 1706 to 2250 for a percentage of around 24.18% (down from the 32.59% before). If we extrapolate **this** number to the 165,412 ballots **we now have 40,875 ballots across PA that were requested by someone other than the person in whose name they were recorded** (while this is lower than the 54,000 it is still a significant fraction of the roughly 70,000 votes separating Biden and Trump).

We now turn to estimating the number of ballots requested by registered Republicans who thought they returned them but which have not arrived and been counted (as of November 16th, 2020). From the responses,

463 people out of 1150 (or around 40.26%) said they had requested a ballot and sent it back; however, these ballots have not been counted. We need to figure out what number to apply this percentage to. We started with 165,412 ballots and now remove the estimated 53,909 ballots that were not requested by registered Republicans in their name to get there were 111,503 ballots requested by registered Republicans in PA. Multiplying this by 40.26% yields **44,892 Republican ballots that the requesters returned but were not counted.** If instead we remove the lower estimate of 40,875 ballots (for the number of ballots requested in someone's name but not by them) and subtract that from 165,412 we get 120,520 ballots requested by registered Republicans in PA. Multiplying this by 40.26% yields **48,522 Republican ballots that the requester returned but were not counted.**

EXTENSION: CONFIDENCE INTERVALS

We can do a more detailed analysis and obtain confidence intervals. If we have a large number of data points (usually more than 30 suffice; as we are in the hundreds to thousands there are no concerns) and we observe in a sample of size n of a population of size N that x have a property, we can extrapolate that to how many in the entire population have the property.

The simplest estimate is that the proportion in the sample with the property is $p = x/n$. so the number in the entire population is just $pN = xN/n$. The difficulty with that is small errors in our estimate of the proportion in the sample scale. Thus we frequently construct 95% and 99% confidence intervals.

If each person from the population of size N is independently chosen to be in the sample of size n , and each person has the same probability p of having the desired property, then the number of people in the sample with the property can be approximated by a normal distribution. We have 95% of the mass of the normal is within 1.96 standard deviations of the mean, and 99% is within 2.576 standard deviations. This leads to the following confidence intervals, where below p is the observed sample proportion having the property ($p = x/n$):

- 95% confidence interval for the probability: $p - 1.96 \sqrt{\frac{p(1-p)}{n}}$ to $p + 1.96 \sqrt{\frac{p(1-p)}{n}}$
- 99% confidence interval for the probability: $p - 2.576 \sqrt{\frac{p(1-p)}{n}}$ to $p + 2.576 \sqrt{\frac{p(1-p)}{n}}$

Once we have these, we can extrapolate to the entire population by multiplying by N :

- 95% confidence interval for the number with property: $p - 1.96 N \sqrt{\frac{p(1-p)}{n}}$ to $p + 1.96 N \sqrt{\frac{p(1-p)}{n}}$
- 99% confidence interval for the number with property: $p - 2.576 N \sqrt{\frac{p(1-p)}{n}}$ to $p + 2.576 N \sqrt{\frac{p(1-p)}{n}}$

We now apply this to our problem. For the first question, we had either 556 out of 1706 who said they did not request a ballot but we know one was requested in their name, or (including the 544 who said they voted in person) we have 556 out of 2250.

- 95% confidence interval for the probability: [30.46%, 34.92%] or [22.93%, 26.49%],
- 99% confidence interval for the probability: [29.76%, 35.62%] or [22.37%, 27.05%].

We can use this to estimate the number of ballots requested by someone other than the registered Republican:

- 95% confidence interval for such ballots: [50,380, 57,755] or [37927, 43823],
- 99% confidence interval for such ballots: [49,222, 58,914] or [37001, 44750].

Thus we estimate the number of ballots requested by someone other than the registered Republican in PA for the 2020 election is almost surely between 49,222 and 58,914 (if we assume the 544 who said they voted in person did not request an absentee ballot), or between 37,001 and 44,750 (if we assume the 544 who said they voted in person did request an absentee ballot). Thus **almost surely the number of ballots requested by someone other than the registered Republican is between 37,001 and 58,914.**

We can apply a similar analysis to the number of ballots that responders said were returned but were not received. Here we have 463 of 1150 registered Republicans saying they had requested and returned a ballot, but as of November 16th, 2020 no ballot in their name had arrived to be counted. It is easy to construct 95% and 99% confidence intervals for these probabilities (we observed 40.26%).

- 95% confidence interval for the probability: [37.43%, 43.10%],
- 99% confidence interval for the probability: [36.54%, 43.99%].

To estimate a 95% or 99% confidence interval we need to know how many ballots to remove from the 165,412. We can compute this many different ways, but in the interest of obtaining the simplest, widest range we can look at the high and low values from the above analysis of what to subtract from 165,412: 37,001 and 58,914. Thus using the 99% confidence interval values we obtain that **almost surely the number of ballots requested by registered Republicans and returned but not counted is in the range from 38,910 to 56,483.**

Respectfully submitted,

Steven J Miller

**EXPERT REPORT OF MATTHEW
BRAYNARD**

I. INTRODUCTION

I have been retained as an expert witness on behalf of Petitioners _____ in the above captioned proceeding. I expect to testify on the following subject matters: (i) analysis of the database for the November 3, 2020 election for the selection of Presidential Electors in the State of Pennsylvania (“State”); (ii) render opinions regarding whether individuals identified in the State’s voter database actually voted; and (iii) render opinions regarding whether individuals identified in the State’s voter database were actually qualified to vote on election day.

This is a statement of my relevant opinions and an outline of the factual basis for these opinions. The opinions and facts contained herein are based on the information made available to me in this case prior to preparation of this report, as well as my professional experience as an election data analyst.

I reserve the right to supplement or amend this statement on the basis of further information obtained prior to the time of trial or in order to clarify or correct the information contained herein.

II. DOCUMENTS REVIEWED

I reviewed the following documents in arriving at my opinions.

1. The voter records and election returns as maintained on the State’s election database;

2. Records maintained by the National Change of Address Source which is maintained by the United States Postal Service and which is available for licensed users on the internet. I am a licensed member.
3. Records developed by the staff of my call centers and social media researchers; and
4. A national voter database maintained by L2 Political;

In addition, I discussed the facts of this matter with Petitioner's attorney Erick G. Kaardal and members of his legal team.

III. PROFESSIONAL QUALIFICATIONS

I have attached hereto as Exhibit 1 a true and correct copy of my resume. As detailed in the resume, I graduated from George Washington University in 2000 with a degree in business administration with a concentration in finance and management information systems. I have been working in the voter data and election administration field since 1996. I have worked building and deploying voter databases for the Republican National Committee, five Presidential campaigns, and no less than one-hundred different campaigns and election-related organizations in all fifty states and the U.S. Virgin Islands. I worked for eight years as a senior analyst at the nation's premier redistricting and election administration firm, Election Data Services, where I worked with states and municipalities on voter databases, delineation, and litigation support related to these matters. Also, while at Election Data Services, I worked under our contract with the US Census Bureau analyzing voting age population. Since 2004, I have worked for my own business, now known as External Affairs, Inc., providing

statistical and data analysis for local, state, and federal candidates and policy organizations in the areas of voter targeting, polling/research, fundraising, branding, and online development and strategy. My firm has worked for over two-hundred candidates from president to town council and over a dozen DC-based policy/advocacy organizations.

With respect to publications I have authored in the last 10 years, I have not authored any publications in the last ten years.

IV. COMPENSATION

I have been retained as an expert witness for Petitioners. I am being compensated for a flat fee of \$40,000.

V. PRIOR TESTIMONY

I have not provided testimony as an expert either at trial or in deposition in the last four years.

VI. STATEMENT OF OPINIONS

As set forth above, I have been engaged to provide expert opinions regarding analysis in the November 3, 2020 election of Presidential electors. Based on my review of the documents set forth above, my discussions with statisticians and analysts working with me and at my direction, my discussions with the attorneys representing the Petitioners, I have the following opinions:

1. It is my opinion, to a reasonable degree of scientific certainty, that in the State, the State's database for the November 3, 2020 election show 3,096,057 individuals voted early or applied for and the State sent an absentee or mail-in ballot, and 481,022 voters whom the state marks as having requested and been sent an

absentee ballot did not return it. It is my opinion, to a reasonable degree of scientific certainty, that in my sample of this universe, 32.59% of these absentee voters in the State did not request an absentee ballot.

2. From the State's database for the November 3, 2020 election and our call center results, it is my opinion to a reasonable degree of scientific certainty that 481,022 individuals whom the State's database identifies as having not returned an absentee ballot, that in my sample of this universe, 27.14% of those absentee voters did in fact mail back an absentee ballot to the clerk's office.
3. From the State's database for the November 3, 2020 election and the NCOA database and other state's voter databases, it is my opinion to a reasonable degree of scientific certainty, that at least 14,328 absentee or early voters were not residents of the State when they voted.
4. From the State's database for the November 3, 2020 election and comparing that data to other states voting data and identifying individuals who cast early/absentee ballots in multiple states, it is my opinion to a reasonable degree of scientific certainty, that at least 742 individuals in the State voted in multiple states.

VII. BASIS AND REASONS SUPPORTING OPINIONS.

It is my opinion that due to the lax controls on absentee voting in the November 3, 2020 election that the current unofficial results of that election include tens of thousands of individuals who were not eligible to vote or failed to record ballots from individuals that were.

First, State maintains a database for the November 3, 2020 election which I obtained from L2 Political and which L2 Political obtained from the State's records on, among other things, voters who applied for an absentee or early voter status. I received this database from L2 Political in a table format with columns and rows which can be searched, sorted and filtered. Each row sets forth data on an individual voter. Each column contained information such as the name of the voter, the voter's address, whether

the voter applied for an absentee ballot, whether the voter voted and whether the voter voted indefinitely confined status.

Second, we are able to obtain other data from other sources such as the National Change of Address Database maintained by the United States Postal Service and licensed by L2 Political. This database also in table format shows the name of an individual, the individual's new address, the individual's old address and the date that the change of address became effective.

Third, I conducted randomized surveys of data obtained from the State's database by having my staff or the call center's staff make phone calls to and ask questions of individuals identified on the State's database by certain categories such as absentee voters who did not return a ballot. Our staff, if they talked to any of these individuals, would then ask a series of questions beginning with a confirmation of the individual's name to ensure it matched the name of the voter identified in the State's database. The staff would then ask additional questions of the individuals and record the answers.

Fourth, I had this staff survey a random sample I obtained from the State's database on indefinitely confined voters. The staff conducted research on the internet and social media postings by these individuals. Staff would undertake to determine if the individual was the individual listed on the database meant the State's definition of indefinitely confined. Staff would then attempt to determine if the individuals had posted photos, images or other information demonstrating that the individuals were not indefinitely confined. For instance, if the individual's social media showed a photo on or near election day of the individual doing something inconsistent with indefinitely

confined status such as riding a bike. Staff would then record the results as either “not indefinitely confined,” “confirmed indefinitely confined,” or “inconclusive.”

Fifth, attached as Exhibits 2 is my written analysis of the data obtained.

Below are the opinions I rendered and the basis of the reasons for those opinions.

1. It is my opinion, to a reasonable degree of scientific certainty, that in the State, the State’s database for the November 3, 2020 election show 3,096,057 individuals voted early or applied for and the State sent an absentee or mail-in ballot, and 481,022 voters whom the state marks as having requested and been sent an absentee ballot did not return it. It is my opinion, to a reasonable degree of scientific certainty, that in my sample of this universe, 32.59% of these absentee voters in the State did not request an absentee ballot.

I obtained this data from the State via L2 Political after the November 3, 2020, Election Day. This data identified 3,096,057 individuals as having applied for an absentee/mail-in ballot and the State sending an absentee/mail-in ballot to these individuals. This data also identified 481,022 absentee voters who were sent a ballot but who failed to return the absentee ballot.

I then had my staff make phone calls to a sample of this universe. When contacted, I had my staff confirm the individual’s identity by name. Once the name was confirmed, I then had staff ask if the person requested an absentee ballot or not. Staff then recorded the number of persons who answered yes. My staff then recorded that of the 1,706 individuals who answered the question, 1150 individuals answered yes to the question whether they requested an absentee ballot. My staff recorded that 556 individuals answered no to the question whether they requested an absentee ballot.

Attached as Exhibit 2 is my written analysis containing information from the data above on absentee voters. Paragraph 2 of Exhibit 2 presents this information.

Next, I then had staff ask the individuals who answered yes, they requested an absentee ballot, whether the individual mailed back the absentee ballot or did not mail back the absentee ballot. Staff then recorded that of the 1,106 individuals who answered the question, 463 individuals answered yes, they mailed back the absentee ballot. Staff recorded 643 individuals answered no, they did not mail back the absentee ballot. Paragraph 2 of Exhibit 2 presents this information.

Based on these results, 32.59% of our sample of these voters in the State did not request an absentee ballot.

2. From the State's database for the November 3, 2020 election and our call center results, it is my opinion to a reasonable degree of scientific certainty that out of the 481,022 individuals whom the State's database identifies as having not returned an absentee ballot, that in my sample of this universe, 27.14% of those absentee voters did in fact mail back an absentee ballot to the clerk's office.

This opinion includes the analysis set forth above. Among the 1106 who told our call center that they did request an absentee ballot and answered the second question, 325 told our staff that they mailed the absentee ballot back, which is 27.14 of the total sample of 1706 whom the State identified as having not returned the absentee ballot the State sent them. Paragraph 2 of Exhibit 2 presents this information.

3. From the State's database for the November 3, 2020 election and the NCOA database and other state's voter databases, it is my opinion to a reasonable degree of scientific certainty, that at least 14,328 absentee or early voters were not residents of the State when they voted.

On Exhibit 2, in paragraph 1, I took the State's database of all absentee or early voters and matched those voters to the NCOA database for the day after Election Day. This data identified 7,426 individuals who had moved of the State prior to Election Day. Further, by comparing the other 49 states voter databases to the State's database, I identified 7051 who registered to vote in a state other than the State subsequent to the date they registered to vote in the State. When merging these two lists and removing the duplicates, and accounting for moves that would not cause an individual to lose their residency and eligibility to vote under State law, these voters total 14,328.

4. From the State's database for the November 3, 2020 election and comparing that data to other states voting data and identifying individuals who cast early/absentee ballots in multiple states, it is my opinion to a reasonable degree of scientific certainty, that at least 742 individuals in the State voted in multiple states.

On Exhibit 2, in paragraph 2, I had my staff compare the State's early and absentee voters to other states voting data and identified individuals who cast early/absentee ballots in multiple states. My staff located 742 individuals who voted in the State and in other states for the November 3, 2020 general election.

VIII. EXHIBITS TO BE USED AT TRIAL TO SUMMARIZE OR EXPLAIN OPINIONS

At the present time, I intend to rely on the documents produced set forth above as possible exhibits.

EXPERT REPORT OF QIANYING (JENNIE) ZHANG

I. INTRODUCTION

I have been retained as an expert witness on behalf of Petitioners in the above captioned proceeding. I expect to testify on the following subject matters: a statistical analysis report on the database analysis conducted by Matthew Braynard conducted for the State of Georgia (“State”) November 3, 2020 General Election.

This is a statement of my relevant opinions and an outline of the factual basis for these opinions. The opinions and facts contained herein are based on the information made available to me in this case, prior to preparation of this report, as well as my professional experience as an assistant professor of Finance at Hillsdale College in the Department of Economics and Business Administration teaching, among other courses, college level statistics.

I reserve the right to supplement or amend this statement on the basis of further information and deposition testimony obtained prior to the time of trial, or in order to clarify or correct the information contained herein.

II. DOCUMENTS REVIEWED

I reviewed the following documents in arriving at my opinions.

1. The expert report of Matthew Braynard;
2. The data documents Matthew Braynard relied on in preparing his expert opinion.

In addition, I discussed the facts of this matter with attorney William F. Mohrman and members of his legal team.

III. PROFESSIONAL QUALIFICATIONS

I am an assistant professor of finance and economics at Hillsdale College. I obtained a B.S. degree in economics and mathematics from East China Normal University in 2009, a M.S. degree in economics from the University of Illinois, Urbana-Champaign in 2010, and a Ph.D. in economics from Florida International University in 2016. As an assistant professor of Finance at Hillsdale College in the Department of Economics and Business Administration. My research areas are in empirical asset pricing and applied time-series econometrics. I teach college level courses in statistics. I am currently teaching Econometrics, Quantitative Analysis and Business and Economic Statistics at Hillsdale College. I am also a member of Mensa and a CFA Level II candidate.

With respect to publications I have authored in the last 10 years, I have not authored any publications in the last ten years.

IV. COMPENSATION

I have been retained as an expert witness for Petitioners. I am being compensated at a flat fee of \$5,000.

V. PRIOR TESTIMONY

I have not provided testimony as an expert either at trial or in deposition in the last four years.

VI. STATEMENT OF OPINIONS

As set forth above, I have been engaged to provide expert opinions regarding a statistical analysis of the November 3, 2020 election of Presidential electors. I have

reviewed the data analysis performed by Matthew Braynard and his call center staff who contacted absentee voters in the State. My opinions are predicated on the assumption that the responders to these calls are a representative sample of the population of registered voters in the State who requested an absentee ballot and responded accurately to the questions during the phone calls. As of November 23, 2020, there were 1,758,196 persons who requested absentee ballots in the State but the State's database showed that the absentee ballot was not returned by 138,029 persons. Approximately 54,213 of these individuals were contacted by Matthew Braynard's staff and 772 answered up to four questions. These responses are used to estimate how many of these 138,029 ballots were requested by someone other than the named person, and to estimate how many of these absentee ballots were mailed back but not received. Based on my review of the documents set forth above, my discussions with statisticians and analysts working with me and at my direction, my discussions with the attorneys representing the Petitioners, I have the following opinions:

1. Absentee Ballots Not Requested. From the State's database identifying 138,029 individuals the State identifies (i) as having requested an absentee ballot, (ii) the State mailed an absentee ballot to the individual and (iii) for whom the State's database identifies not having returned the absentee ballot to the State, Braynard's call center staff contacted and spoke with a random sample of 772 of these individuals. In response to Braynard's staff's question whether those 772 absentee voters contacted actually requested an absentee ballot from the State, 142 said they did not request an absentee ballot. This is a ratio of 18.39% of the 772 absentee voters contacted. Based on my statistical analysis of these numbers, it is my expert opinion to a reasonable degree of scientific certainty that there is a 95% confidence interval for the probability of the percentage of absentee voters who did not request an absentee ballot in the State of between 15.66% and 21.13%. Based on my statistical analysis of these numbers, it is my further expert opinion to a reasonable degree of scientific certainty that there is a 99% confidence interval for the probability of

the percentage of absentee voters who did not request of between 14.80% and 21.98%. Using these percentages and applying them to the number of absentee ballots identified above of 138,029, based on my statistical analysis, there is a 95% confidence interval that between 21,616 and 29,161 of such absentee ballots were not requested by an eligible State voter and there is a 99% confidence interval that between 20,431 and 30,347 of the absentee ballots the State issued were not requested by an eligible State voter.

2. Absentee Ballots Returned But Not Counted. From the State's database identifying 138,029 individuals who the State further identifies (i) as having requested an absentee ballot, (ii) the State mailed an absentee ballot to the individual and (iii) for whom the State's database identifies not having returned the absentee ballot to the State, Braynard's call center staff contacted and spoke with a random sample of 583 of these individuals. In response to Braynard's staff's question whether those 583 absentee voters actually mailed back an absentee ballot from the State, 257 of these absentee voters said they did mail back an absentee ballot to the State. This is a ratio of 44.08% of the 583 absentee voters contacted. Based on my statistical analysis of these numbers, it is my expert opinion to a reasonable degree of scientific certainty that there is a 95% confidence interval for the probability of the percentage of these absentee voters who did return an absentee ballot in the State of between 40.05% and 48.11%. Based on my statistical analysis of these numbers, it is my further expert opinion to a reasonable degree of scientific certainty that there is a 99% confidence interval for the probability of the percentage of these absentee voters who did return an absentee ballot of between 38.79% and 49.38%. Using these percentages and applying them to the estimated number of requested absentee ballots of 112,640 based on my statistical analysis, there is a 95% confidence interval that between 45,115 and 54,194 of the absentee ballots the State issued and did not count were returned to the State by an eligible State voter and there is a 99% confidence interval that between 43,688 and 55,621 of the absentee ballots the State issued and did not count were returned to the State by an eligible State voter.

VII. BASIS AND REASONS SUPPORTING OPINIONS.

The basis and reasons supporting my opinions are set forth below. I received a data set of responses to a phone survey given to people absentee voters in the State who were sent a ballot but whom failed to return the absentee ballot. Out of 1,758,196 individuals identified as having applied for an absentee ballot and the State sending an

absentee ballot to these individuals, there were 138,029 (7.85%) such voters. Matthew Braynard's staff contacted 772 of the 138,029 absentee voters identified on the State's database. For purposes of this report, I assume that the 772 individuals who responded to Mr. Braynard's staff are a representative sample of this population, and responded accurately to the questions posed to them. These respondents were asked the following questions. First, the respondents were asked whether or not they had requested an absentee ballot. Of the 772 respondents, 630 (81.61%) confirmed and 142 (18.39%) denied having requested an absentee ballot. Second, those who answered that they had requested an absentee ballot were asked a second question: whether they had mailed back their absentee ballot? Of the 630 who were identified as having requested a ballot, 583 chose to respond to this second question. Of these, 257 (44.08%) mailed back their ballots and 326 (55.92%) did not mail back their ballots.

Under our assumptions, I can use these survey results regarding the individuals who responded to the first question to extrapolate to the larger population of interest. Applying a standard statistical formula,¹ I can say with certainty that there is a 95% confidence interval for the probability of the percentage of absentee voters who individuals the State identifies (i) as having requested an absentee ballot, (ii) the State

¹ If each person from the population of size N is independently chosen to be in the sample of size n , and each person has the same probability p of having the desired property, then the number of people in the sample with the property can be approximated by a normal distribution. We have 95% within 1.96 standard deviations and 99% is within 2.576 standard deviations. This leads to the following confidence intervals, where below p is the observed sample proportion having the property ($p = x/n$):

$$CI(95\%) = p \pm 1.96 \sqrt{\frac{p(1-p)}{n}}; CI(99\%) = p \pm 2.576 \sqrt{\frac{p(1-p)}{n}}.$$

To extrapolate to the entire population of interest, we multiple the above equations by N .

mailed an absentee ballot to the individual and (iii) for whom the State's database identifies not having returned the absentee ballot to the State, the percentage of such absentee voters who did not request an absentee ballot in the State is between 15.66% and 21.13%. Based on my statistical analysis of these numbers, it is my further expert opinion to a reasonable degree of scientific certainty that there is a 99% confidence interval for the percentage of these same absentee voters of between 14.80% and 21.99%. Using these percentages and applying them to the number of absentee ballots identified above of 138,029, based on my statistical analysis, there is a 95% confidence interval that between 21,616 and 29,161 of such absentee ballots were not requested by an eligible State voter and there is a 99% confidence interval that between 20,431 and 30,347 of the absentee ballots the State issued were not requested by an eligible State voter.

Under our assumptions, I can use these survey results regarding the individuals who responded to the second question to extrapolate to the larger population of interest. Since the survey only asked the second question to those who answered affirmatively to the first question, i.e., those who requested absentee ballots, I must focus on this population. I estimate that there are 112,640 voters who solicited ballots using the product of the number of people that were sent a ballot but whom failed to return the absentee ballot and the proportion of respondents in Braynard's analysis who confirmed soliciting a ballot (138,029 times 81.61%). Applying the same standard statistical formula set forth in footnote 1, I can say to a reasonable degree of scientific certainty that there is a 95% confidence interval for the percentage of absentee voters who did return an absentee ballot to the estimated 112,640 voters who solicited ballots and identified by the

State as not having returned the absentee ballot, is between 40.05% and 48.11%. Based on my statistical analysis of these numbers, it is my further expert opinion to a reasonable degree of scientific certainty that there is a 99% confidence interval for the percentage of these same absentee voters returned an absentee ballot of between 38.79% and 49.38%. Using these percentages and applying them to the number of absentee ballots identified above of 112,640, based on my statistical analysis, there is a 95% confidence interval that between 45,115 and 54,194 of such absentee voters who did return absentee ballots to the State and there is a 99% confidence interval that between 43,688 and 55,621 of the absentee ballots such absentee voters who did return absentee ballots to the State.

STATE OF GEORGIA**

**JOHN WOOD, AS AGGRIEVED
ELECTOR,**

CONTESTANT,

v.

CIVIL ACTION NO.:

**SECRETARY OF STATE BRAD RAFFENSBERGER
AND GOVERNOR BRIAN KEMP,**

DEFENDANT.

**EXPERT REPORT OF MATTHEW
BRAYNARD**

I. INTRODUCTION

I have been retained as an expert witness on behalf of Petitioner in the above captioned proceeding. I expect to testify on the following subject matters: (i) analysis of the database for the November 3, 2020 election for the selection of Presidential Electors in the State of Georgia (“State”); (ii) render opinions regarding whether individuals identified in the State’s voter database actually voted; and (iii) render opinions regarding whether individuals identified in the State’s voter database were actually qualified to vote on election day.

This is a statement of my relevant opinions and an outline of the factual basis for these opinions. The opinions and facts contained herein are based on the information made available to me in this case prior to preparation of this report, as well as my professional experience as an election data analyst.

I reserve the right to supplement or amend this statement on the basis of further information obtained prior to the time of trial or in order to clarify or correct the information contained herein.

II. DOCUMENTS REVIEWED

I reviewed the following documents in arriving at my opinions.

1. The voter records and election returns as maintained on the State’s election database;

2. Records maintained by the National Change of Address Source which is maintained by the United States Postal Service and which is available for licensed users on the internet. I am a licensed member.
3. Records developed by the staff of my call centers and social media researchers; and
4. A national voter database maintained by L2 Political;
5. The US Postal Service's official list of owned and leased facilities.

In addition, I discussed the facts of this matter with Petitioner's attorney Erick G. Kaardal and members of his legal team.

III. PROFESSIONAL QUALIFICATIONS

I have attached hereto as Exhibit 1 a true and correct copy of my resume. As detailed in the resume, I graduated from George Washington University in 2000 with a degree in business administration with a concentration in finance and management information systems. I have been working in the voter data and election administration field since 1996. I have worked building and deploying voter databases for the Republican National Committee, five Presidential campaigns, and no less than one-hundred different campaigns and election-related organizations in all fifty states and the U.S. Virgin Islands. I worked for eight years as a senior analyst at the nation's premier redistricting and election administration firm, Election Data Services, where I worked with states and municipalities on voter databases, delineation, and litigation support related to these matters. Also, while at Election Data Services, I worked under our contract with the US Census Bureau analyzing voting age population. Since 2004, I

have worked for my own business, now known as External Affairs, Inc., providing statistical and data analysis for local, state, and federal candidates and policy organizations in the areas of voter targeting, polling/research, fundraising, branding, and online development and strategy. My firm has worked for over two-hundred candidates from president to town council and over a dozen DC-based policy/advocacy organizations.

With respect to publications I have authored in the last 10 years, I have not authored any publications in the last ten years.

IV. COMPENSATION

I have been retained as an expert witness for Petitioners. I am being compensated for a flat fee of \$40,000.

V. PRIOR TESTIMONY

I have not provided testimony as an expert either at trial or in deposition in the last four years.

VI. STATEMENT OF OPINIONS

As set forth above, I have been engaged to provide expert opinions regarding analysis in the November 3, 2020 election of Presidential electors. Based on my review of the documents set forth above, my discussions with statisticians and analysts working with me and at my direction, my discussions with the attorneys representing the Petitioners, I have the following opinions:

1. It is my opinion, to a reasonable degree of scientific certainty, that in the State, the State's database for the November 3, 2020 election show 138,029 voters whom the

state marks as having requested and been sent an absentee ballot did not return it. It is my opinion, to a reasonable degree of scientific certainty, that in my sample of this universe, 18.39% of these absentee voters in the State did not request an absentee ballot.

2. From the State's database for the November 3, 2020 election and our call center results, it is my opinion to a reasonable degree of scientific certainty that 138,029 individuals whom the State's database identifies as having not returned an absentee ballot, that in my sample of this universe, 33.29% of those absentee voters did in fact mail back an absentee ballot to the clerk's office.
3. From the State's database for the November 3, 2020 election, the NCOA database, and our call center results, it is my opinion to a reasonable degree of scientific certainty that out of the 138,221 individuals had changed their address before the election, that in my sample of this universe, 1.53% of those individuals denied casting a ballot.
4. From the State's database for the November 3, 2020 election and the NCOA database and other state's voter databases, it is my opinion to a reasonable degree of scientific certainty, that at least 20,312 absentee or early voters were not residents of the State when they voted.
5. From the State's database for the November 3, 2020 election and comparing that to the USPS Owned and Leased Facilities Reports, it is my opinion that 1,043 early and absentee ballots were cast by voters who were registered with a postal box disguised as a residential address.
6. From the State's database for the November 3, 2020 election and comparing that data to other states voting data and identifying individuals who cast early/absentee ballots in multiple states, it is my opinion to a reasonable degree of scientific certainty, that at least 234 individuals in the State voted in multiple states.

VII. BASIS AND REASONS SUPPORTING OPINIONS.

It is my opinion that due to the lax controls on absentee voting in the November 3, 2020 election that the current unofficial results of that election include tens of thousands of individuals who were not eligible to vote or failed to record ballots from individuals that were.

First, State maintains a database for the November 3, 2020 election which I obtained from L2 Political and which L2 Political obtained from the State's records on, among other things, voters who applied for an absentee or early voter status. I received this database from L2 Political in a table format with columns and rows which can be searched, sorted and filtered. Each row sets forth data on an individual voter. Each column contained information such as the name of the voter, the voter's address, whether the voter applied for an absentee ballot, whether the voter voted and whether the voter voted indefinitely confined status.

Second, we are able to obtain other data from other sources such as the National Change of Address Database maintained by the United States Postal Service and licensed by L2 Political. This database also in table format shows the name of an individual, the individual's new address, the individual's old address and the date that the change of address became effective.

Third, I conducted randomized surveys of data obtained from the State's database by having my staff or the call center's staff make phone calls to and ask questions of individuals identified on the State's database by certain categories such as absentee voters who did not return a ballot. Our staff, if they talked to any of these individuals, would then ask a series of questions beginning with a confirmation of the individual's name to ensure it matched the name of the voter identified in the State's database. The staff would then ask additional questions of the individuals and record the answers.

Fourth, my team compared the residential addresses of record for early and absentee voters and established

Fifth, attached as Exhibits 2 is my written analysis of the data obtained.

Below are the opinions I rendered and the basis of the reasons for those opinions.

1. It is my opinion, to a reasonable degree of scientific certainty, that in the State, the State's database for the November 3, 2020 election 138,029 individuals applied for and the State sent an absentee ballot but did not return that ballot. It is also my opinion, to a reasonable degree of scientific certainty, that in my sample of this universe, 18.39% of these absentee voters in the State did not request an absentee ballot.

I obtained this data from the State via L2 Political after the November 3, 2020, Election Day. This data identified 138,029 absentee voters who were sent a ballot but who failed to return the absentee ballot.

I then had my staff make phone calls to a sample of this universe. When contacted, I had my staff confirm the individual's identity by name. Once the name was confirmed, I then had staff ask if the person requested an absentee ballot or not. Staff then recorded the number of persons who answered yes. My staff then recorded that of the 722 individuals who answered the question, 630 individuals answered yes to the question whether they requested an absentee ballot. My staff recorded that 142 individuals answered no to the question whether they requested an absentee ballot. Attached as Exhibit 2 is my written analysis containing information from the data above on absentee voters. Paragraph 2 of Exhibit 2 presents this information.

Next, I then had staff ask the individuals who answered yes, they requested an absentee ballot, whether the individual mailed back the absentee ballot or did not mail back the absentee ballot. Staff then recorded that of the 583 individuals who answered the question, 257 individuals answered yes, they mailed back the absentee ballot. Staff

recorded 326 individuals answered no, they did not mail back the absentee ballot.

Paragraph 2 of Exhibit 2 presents this information.

Based on these results, 18.39% of our sample of these absentee voters in the State did not request an absentee ballot.

2. From the State's database for the November 3, 2020 election and our call center results, it is my opinion to a reasonable degree of scientific certainty that out of the 138,029 individuals who the State's database identifies as having not returned an absentee ballot, that in my sample of this universe, 33.29% of those absentee voters did in fact mail back an absentee ballot to the clerk's office.

This opinion includes the analysis set forth above. Among the 583 who told our call center that they did request an absentee ballot and answered the second question, 257 told our staff that they mailed the absentee ballot back, which is 33.29% of those whom the State identified as having not returned the absentee ballot the State sent them.

Paragraph 2 of Exhibit 2 presents this information.

3. From the State's database for the November 3, 2020 election, the NCOA database, and our call center results, it is my opinion to a reasonable degree of scientific certainty that out of the 138,221 individuals had changed their address before the election, that in my sample of this universe, 1.53% of those individuals denied casting a ballot.

On Exhibit 2, in paragraph 4, I took the State's database of all absentee or early voters and matched those voters to the NCOA database for the day after election day. This data identified 138,221 individuals whose address on the State's database did not match the address on the NCOA database on election day. Next, I had my staff call the persons identified and ask these individuals whether they had voted. My call center staff identified 2,379 individuals who confirmed that they had casted a ballot. My call center

staff identified 37 individuals who denied casting a ballot. Our analysis shows that 1.53% of our sample of these individuals who changed address did not vote despite the State's data recorded that the individuals did vote.

4. From the State's database for the November 3, 2020 election and the NCOA database and other state's voter databases, it is my opinion to a reasonable degree of scientific certainty, that at least 20,312 absentee or early voters were not residents of the State when they voted.

On Exhibit 2, in paragraph 1, I took the State's database of all absentee or early voters and matched those voters to the NCOA database for the day after Election Day. This data identified 15,700 individuals who had moved of the State prior to Election Day. Further, by comparing the other 49 states voter databases to the State's database, I identified 4,926 who registered to vote in a state other than the State subsequent to the date they registered to vote in the State. When merging these two lists and removing the duplicates, and accounting for moves that would not cause an individual to lose their residency and eligibility to vote under State law, these voters total 20,312.

5. From the State's database for the November 3, 2020 election and comparing that to the USPS Owned and Leased Facilities Reports, it is my opinion that 1,043 early and absentee ballots were cast by voters who were registered with a postal box disguised as a residential address.

For this determination, I had my staff compare the official list of leased and owned postal facilities provided by the United States Postal Service to the list of early and absentee voters. The matches are identified in Exhibit 3.

We identified 1,043 voters that listed a postal facility as their physical address. In many cases these residential addresses disguised their PO box number as an apartment number or suite number (E.G. "Apt 5402," "Suite 305B", "Unit 305A," etc.)

6. From the State's database for the November 3, 2020 election and comparing that data to other states voting data and identifying individuals who cast early/absentee ballots in multiple states, it is my opinion to a reasonable degree of scientific certainty, that at least 395 individuals in the State voted in multiple states.

On Exhibit 2, in paragraph 2, I had my staff compare the State's early and absentee voters to other states voting data and identified individuals who cast early/absentee ballots in multiple states. My staff located 395 individuals who voted in the State and in other states for the November 3, 2020 general election.

VIII. EXHIBITS TO BE USED AT TRIAL TO SUMMARIZE OR EXPLAIN OPINIONS

At the present time, I intend to rely on the documents produced set forth above as possible exhibits.

Re: Georgia Voter Integrity Project: Illegal Ballots Preliminary Results

This is an outline of the six analysis methods we have applied to the State of Georgia ("State") and the results we have obtained as of the date set forth above.

1. Residency Violations

We have evaluated early and absentee voters who were matched to the national change of address database (NCOA) or are found to have registered to vote in other states subsequent to their registration in target states (OOSSR), strongly indicating a violation of residency requirements.

	NCOA	OOSSR	Merged
GA	15,700	4,926	20,312

The OOSSR would be much higher, but we limited due to the lack of full dates of birth available to us from many states' voter databases. A full, complete birthdate is necessary for our match process.

2. Double Voting (Early/Absentee ONLY)

We compared the target state early and absentee voters to other states voting data and identified individuals who cast early/absentee ballots in multiple states.

GA: 395

3. Confirmation of "Unreturned" Absentee Ballots

I obtained data from the State via L2 Political after the November 3, 2020, Election Day. This data identified 138,029 voters who were sent an absentee ballot but who failed to return the absentee ballot.

We then called a sample of these voters totaling 772 individuals to ask if they requested the absentee ballot. Of the 772 individuals our call center contacted and spoke with whom the State data identified as having requested an absentee ballot but the data identified as having not returned the ballot, our call center identified 142 individuals who did not request an absentee

ballot. Among those who said they had requested an absentee ballot and answered whether they had mailed the ballot back, 326 individuals told our call center that they returned a ballot

State	Did Not Request	Percentage of 2,114 Sample
Georgia	142	18.39%

State	Returned	Percentage of 2,114 Sample
Georgia	257	33.29%

4. Confirmation of National Change of Address Voters

We contacted individuals who have been recorded having voted but filed a national change of address to confirm that they did indeed cast a ballot. Once again, our call center staff contacted a random sample of 2,379 individuals from the State data. From these calls, our staff identified 2,379 individuals who told our call center staff they did cast a ballot and 18 individuals who told our call center staff they did cast a ballot. The following counts and percent of people we reached by phone told us they did NOT cast an early or absentee ballot despite the state recording such a ballot.

State	Total	Percentage of Sample
Georgia	37	1.53%

5. Confirmation of Low Propensity in Heavy Turnout Precincts

We reached out to Individuals who were marked as having voted despite never voting, not voting in many years, or just recently registered. We concentrated this in precincts with unusually high turnout.

State	Total	Percentage of Sample
Georgia	24	0.85%

Postal Company	County	Voter Registration #	Last Name	First Name	Middle Name	Suffix	Street Name	Apt/Unit	City	State	Zip Code	Application Status	Ballot Status	Status Reason	Application Date	Ballot Issued Date	Ballot Return Date	Ballot Style

EXPERT REPORT OF QIANYING (JENNIE) ZHANG

I. INTRODUCTION

I have been retained as an expert witness on behalf of Petitioners in the above captioned proceeding. I expect to testify on the following subject matters: (i) a statistical analysis report on the database analysis conducted by Matthew Braynard conducted for the State of Wisconsin (“State”).

This is a statement of my relevant opinions and an outline of the factual basis for these opinions. The opinions and facts contained herein are based on the information made available to me in this case, prior to preparation of this report, as well as my professional experience as an assistant professor of Finance at Hillsdale College in the Department of Economics and Business Administration teaching, among other courses, college level statistics.

I reserve the right to supplement or amend this statement on the basis of further information and deposition testimony obtained prior to the time of trial, or in order to clarify or correct the information contained herein.

II. DOCUMENTS REVIEWED

I reviewed the following documents in arriving at my opinions.

1. The expert report of Matthew Braynard;
2. The data documents Matthew Braynard relied on in preparing his expert opinion.

In addition, I discussed the facts of this matter with attorney William F. Mohrman and members of his legal team.

III. PROFESSIONAL QUALIFICATIONS

I am an assistant professor of finance and economics at Hillsdale College. I obtained a B.S. degree in economics and mathematics from East China Normal University in 2009, a M.S. degree in economics from the University of Illinois, Urbana-Champaign in 2010, and a Ph.D. in economics from Florida International University in 2016. As an assistant professor of Finance at Hillsdale College in the Department of Economics and Business Administration. My research areas are in empirical asset pricing and applied time-series econometrics. I teach college level courses in statistics. I am currently teaching Econometrics, Quantitative Analysis and Business and Economic Statistics at Hillsdale College. I am also a member of Mensa and a CFA Level II candidate.

With respect to publications I have authored in the last 10 years, I have not authored any publications in the last ten years.

IV. COMPENSATION

I have been retained as an expert witness for Petitioners. I am being compensated at a flat fee of \$5,000.

V. PRIOR TESTIMONY

I have not provided testimony as an expert either at trial or in deposition in the last four years.

VI. STATEMENT OF OPINIONS

As set forth above, I have been engaged to provide expert opinions regarding a statistical analysis of the November 3, 2020 election of Presidential electors. I have

reviewed the data analysis performed by Matthew Braynard and his call center staff who contacted absentee voters in the State. My opinions are predicated on the assumption that the responders to these calls are a representative sample of the population of registered voters in the State who requested an absentee ballot and responded accurately to the questions during the phone calls. As of November 23, 2020, there were 2,131,318 persons who requested absentee ballots in the State but the State's database showed that the absentee ballot was not returned by 96,771 persons. Approximately 59,000 of these individuals were contacted by Matthew Braynard's staff and 2,111 answered up to four questions. These responses are used to estimate how many of these 96,771 ballots were requested by someone other than the named person, and to estimate how many of these absentee ballots were mailed back but not received. Based on my review of the documents set forth above, my discussions with statisticians and analysts working with me and at my direction, my discussions with the attorneys representing the Petitioners, I have the following opinions:

1. Absentee Ballots Not Requested. From the State's database identifying 96,771 individuals the State identifies (i) as having requested an absentee ballot, (ii) the State mailed an absentee ballot to the individual and (iii) for whom the State's database identifies not having returned the absentee ballot to the State, Braynard's call center staff contacted and spoke with a random sample of 2,111 of these individuals. In response to Braynard's staff's question whether those 2,111 absentee voters contacted actually requested an absentee ballot from the State, 382 said they did not request an absentee ballot. This is a ratio of 18.10% of the 2,111 absentee voters contacted. Based on my statistical analysis of these numbers, it is my expert opinion to a reasonable degree of scientific certainty that there is a 95% confidence interval for the probability of the percentage of absentee voters who did not request an absentee ballot in the State of between 16.45% and 19.74%. Based on my statistical analysis of these numbers, it is my further expert opinion to a reasonable degree of scientific certainty that there is a 99% confidence interval for the probability of

the percentage of absentee voters who did not request of between 15.94% and 20.25%. Using these percentages and applying them to the number of absentee ballots identified above of 96,771, based on my statistical analysis, there is a 95% confidence interval that between 15,922 and 19,100 of such absentee ballots were not requested by an eligible State voter and there is a 99% confidence interval that between 15,423 and 19,600 of the absentee ballots the State issued were not requested by an eligible State voter.

2. Absentee Ballots Returned But Not Counted. From the State's database identifying 96,771 individuals who the State further identifies (i) as having requested an absentee ballot, (ii) the State mailed an absentee ballot to the individual and (iii) for whom the State's database identifies not having returned the absentee ballot to the State, Braynard's call center staff contacted and spoke with a random sample of 1,625 of these individuals. In response to Braynard's staff's question whether those 1,625 absentee voters actually mailed back an absentee ballot from the State, 325 of these absentee voters said they did mail back an absentee ballot to the State. This is a ratio of 20% of the 1,625 absentee voters contacted. Based on my statistical analysis of these numbers, it is my expert opinion to a reasonable degree of scientific certainty that there is a 95% confidence interval for the probability of the percentage of these absentee voters who did return an absentee ballot in the State of between 18.05% and 21.94%. Based on my statistical analysis of these numbers, it is my further expert opinion to a reasonable degree of scientific certainty that there is a 99% confidence interval for the probability of the percentage of these absentee voters who did return an absentee ballot of between 17.44% and 22.55%. Using these percentages and applying them to the estimated number of requested absentee ballots of 79,260 based on my statistical analysis, there is a 95% confidence interval that between 14,310 and 17,393 of the absentee ballots the State issued and did not count were returned to the State by an eligible State voter and there is a 99% confidence interval that between 13,826 and 17,878 of the absentee ballots the State issued and did not count were returned to the State by an eligible State voter.

VII. BASIS AND REASONS SUPPORTING OPINIONS.

The basis and reasons supporting my opinions are set forth below. I received a data set of responses to a phone survey given to people absentee voters in the State who were sent a ballot but whom failed to return the absentee ballot. Out of 2,131,318 individuals identified as having applied for an absentee ballot and the State sending an

absentee ballot to these individuals, there were 96,771 (4.54%) such voters. Matthew Braynard's staff contacted 2,111 of the 96,711 absentee voters identified on the State's database. For purposes of this report, I assume that the 2,111 individuals who responded to Mr. Braynard's staff are a representative sample of this population, and responded accurately to the questions posed to them. These respondents were asked the following questions. First, the respondents were asked whether or not they had requested an absentee ballot. Of the 2,111 respondents, 1,729 (81.90%) confirmed and 382 (18.10%) denied having requested an absentee ballot. Second, those who answered that they had requested an absentee ballot were asked a second question: whether they had mailed back their absentee ballot? Of the 1,729 who were identified as having requested a ballot, 1,625 chose to respond to this second question. Of these, 325 (20%) mailed back their ballots and 1,300 (80%) did not mail back their ballots.

Under our assumptions, I can use these survey results regarding the individuals who responded to the first question to extrapolate to the larger population of interest. Applying a standard statistical formula,¹ I can say with certainty that there is a 95% confidence interval for the probability of the percentage of absentee voters who individuals the State identifies (i) as having requested an absentee ballot, (ii) the State

¹ If each person from the population of size N is independently chosen to be in the sample of size n , and each person has the same probability p of having the desired property, then the number of people in the sample with the property can be approximated by a normal distribution. We have 95% within 1.96 standard deviations and 99% is within 2.576 standard deviations. This leads to the following confidence intervals, where below p is the observed sample proportion having the property ($p = x/n$):

$$CI(95\%) = p \pm 1.96 \sqrt{\frac{p(1-p)}{n}}; CI(99\%) = p \pm 2.576 \sqrt{\frac{p(1-p)}{n}}.$$

To extrapolate to the entire population of interest, we multiple the above equations by N .

mailed an absentee ballot to the individual and (iii) for whom the State's database identifies not having returned the absentee ballot to the State, the percentage of such absentee voters who did not request an absentee ballot in the State is between 16.45% and 19.74%. Based on my statistical analysis of these numbers, it is my further expert opinion to a reasonable degree of scientific certainty that there is a 99% confidence interval for the percentage of these same absentee voters of between 15.94% and 20.25%. Using these percentages and applying them to the number of absentee ballots identified above of 96,771, based on my statistical analysis, there is a 95% confidence interval that between 15,922 and 19,101 of such absentee ballots were not requested by an eligible State voter and there is a 99% confidence interval that between 15,423 and 19,600 of the absentee ballots the State issued were not requested by an eligible State voter.

Under our assumptions, I can use these survey results regarding the individuals who responded to the second question to extrapolate to the larger population of interest. Since the survey only asked the second question to those who answered affirmatively to the first question, i.e., those who requested absentee ballots, I must focus on this population. I estimate that there are 79,260 voters who solicited ballots using the product of the number of people that were sent a ballot but whom failed to return the absentee ballot and the proportion of respondents in Braynard's analysis who confirmed soliciting a ballot (96,771 times 81.90%). Applying the same standard statistical formula set forth in footnote 1, I can say to a reasonable degree of scientific certainty that there is a 95% confidence interval for the percentage of absentee voters who did return an absentee ballot to the estimated 79,260 voters who solicited ballots and identified by the State as

not having returned the absentee ballot, is between 18.05% and 21.94%. Based on my statistical analysis of these numbers, it is my further expert opinion to a reasonable degree of scientific certainty that there is a 99% confidence interval for the percentage of these same absentee voters returned an absentee ballot of between 17.44% and 22.55%. Using these percentages and applying them to the number of absentee ballots identified above of 79,260, based on my statistical analysis, there is a 95% confidence interval that between 14,310 and 17,393 of such absentee voters who did return absentee ballots to the State and there is a 99% confidence interval that between 13,826 and 17,878 of the absentee ballots such absentee voters who did return absentee ballots to the State.

VIII. EXHIBITS TO BE USED AT TRIAL TO SUMMARIZE OR EXPLAIN OPINIONS

At the present time, I intend to rely on the documents produced set forth above as possible exhibits.

Dated: November 25, _____

Qianying Jennie Zhang

**EXPERT REPORT OF MATTHEW
BRAYNARD**

I. INTRODUCTION

I have been retained as an expert witness on behalf of Petitioners _____ in the above captioned proceeding. I expect to testify on the following subject matters: (i) analysis of the database for the November 3, 2020 election for the selection of Presidential Electors in the State of Wisconsin (“State”); (ii) render opinions regarding whether individuals identified in the State’s voter database actually voted; and (iii) render opinions regarding whether individuals identified in the State’s voter database were actually qualified to vote on election day.

This is a statement of my relevant opinions and an outline of the factual basis for these opinions. The opinions and facts contained herein are based on the information made available to me in this case prior to preparation of this report, as well as my professional experience as an election data analyst.

I reserve the right to supplement or amend this statement on the basis of further information obtained prior to the time of trial or in order to clarify or correct the information contained herein.

II. DOCUMENTS REVIEWED

I reviewed the following documents in arriving at my opinions.

1. The voter records and election returns as maintained on the State’s election database;

2. Records maintained by the National Change of Address Source which is maintained by the United States Postal Service and which is available for licensed users on the internet. I am a licensed member.
3. Records developed by the staff of my call centers and social media researchers; and
4. A national voter database maintained by L2 Political;

In addition, I discussed the facts of this matter with Petitioner's attorney Erick G. Kaardal and members of his legal team.

III. PROFESSIONAL QUALIFICATIONS

I have attached hereto as Exhibit 1 a true and correct copy of my resume. As detailed in the resume, I graduated from George Washington University in 2000 with a degree in business administration with a concentration in finance and management information systems. I have been working in the voter data and election administration field since 1996. I have worked building and deploying voter databases for the Republican National Committee, five Presidential campaigns, and no less than one-hundred different campaigns and election-related organizations in all fifty states and the U.S. Virgin Islands. I worked for eight years as a senior analyst at the nation's premier redistricting and election administration firm, Election Data Services, where I worked with states and municipalities on voter databases, delineation, and litigation support related to these matters. Also, while at Election Data Services, I worked under our contract with the US Census Bureau analyzing voting age population. Since 2004, I have worked for my own business, now known as External Affairs, Inc., providing

statistical and data analysis for local, state, and federal candidates and policy organizations in the areas of voter targeting, polling/research, fundraising, branding, and online development and strategy. My firm has worked for over two-hundred candidates from president to town council and over a dozen DC-based policy/advocacy organizations.

With respect to publications I have authored in the last 10 years, I have not authored any publications in the last ten years.

IV. COMPENSATION

I have been retained as an expert witness for Petitioners. I am being compensated for a flat fee of \$40,000.

V. PRIOR TESTIMONY

I have not provided testimony as an expert either at trial or in deposition in the last four years.

VI. STATEMENT OF OPINIONS

As set forth above, I have been engaged to provide expert opinions regarding analysis in the November 3, 2020 election of Presidential electors. Based on my review of the documents set forth above, my discussions with statisticians and analysts working with me and at my direction, my discussions with the attorneys representing the Petitioners, I have the following opinions:

1. It is my opinion, to a reasonable degree of scientific certainty, that in the State, the State's database for the November 3, 2020 election show 96,711 voters whom the state marks as having requested and been sent an absentee ballot did not return it. It is my opinion, to a reasonable degree of scientific certainty, that in my sample

of this universe, 18.12% of these absentee voters in the State did not request an absentee ballot.

2. From the State's database for the November 3, 2020 election and our call center results, it is my opinion to a reasonable degree of scientific certainty that 96,771 individuals whom the State's database identifies as having not returned an absentee ballot, that in my sample of this universe, 15.37% of those absentee voters did in fact mail back an absentee ballot to the clerk's office.
3. From the State's database for the November 3, 2020 election, the NCOA database, and our call center results, it is my opinion to a reasonable degree of scientific certainty that out of the 26,673 individuals had changed their address before the election, that in my sample of this universe, 1.11% of those individuals denied casting a ballot.
4. From the State's database for the November 3, 2020 election and the NCOA database and other state's voter databases, it is my opinion to a reasonable degree of scientific certainty, that at least 6,848 absentee or early voters were not residents of the State when they voted.
5. From the State's database for the November 3, 2020 election and my staff's review of social media for voters who applied for indefinitely confined absentee voting status, it is my opinion to a reasonable degree of scientific certainty, that of the 213,215 who claimed indefinitely confined absentee voter status in the State, that in my sample of this universe, 45.23% of those individuals were not indefinitely confined on Election Day.
6. From the State's database for the November 3, 2020 election and comparing that data to other states voting data and identifying individuals who cast early/absentee ballots in multiple states, it is my opinion to a reasonable degree of scientific certainty, that at least 234 individuals in the State voted in multiple states.

VII. BASIS AND REASONS SUPPORTING OPINIONS.

First, State maintains a database for the November 3, 2020 election which I obtained from L2 Political and which L2 Political obtained from the State's records on, among other things, voters who applied for an absentee or early voter status. I received this database from L2 Political in a table format with columns and rows which can be searched, sorted and filtered. Each row sets forth data on an individual voter. Each

column contained information such as the name of the voter, the voter's address, whether the voter applied for an absentee ballot, whether the voter voted and whether the voter voted indefinitely confined status.

Second, we are able to obtain other data from other sources such as the National Change of Address Database maintained by the United States Postal Service and licensed by L2 Political. This database also in table format shows the name of an individual, the individual's new address, the individual's old address and the date that the change of address became effective.

Third, I conducted randomized surveys of data obtained from the State's database by having my staff or the call center's staff make phone calls to and ask questions of individuals identified on the State's database by certain categories such as absentee voters who did not return a ballot. Our staff, if they talked to any of these individuals, would then ask a series of questions beginning with a confirmation of the individual's name to ensure it matched the name of the voter identified in the State's database. The staff would then ask additional questions of the individuals and record the answers.

Fourth, I had this staff survey a random sample I obtained from the State's database on indefinitely confined voters. The staff conducted research on the internet and social media postings by these individuals. Staff would undertake to determine if the individual was the individual listed on the database meant the State's definition of indefinitely confined. Staff would then attempt to determine if the individuals had posted photos, images or other information demonstrating that the individuals were not indefinitely confined. For instance, if the individual's social media showed a photo on or

near election day of the individual doing something inconsistent with indefinitely confined status such as riding a bike. Staff would then record the results as either “not indefinitely confined,” “confirmed indefinitely confined,” or “inconclusive.”

Fifth, attached as Exhibits 2 is my written analysis of the data obtained.

Below are the opinions I rendered and the basis of the reasons for those opinions.

1. It is my opinion, to a reasonable degree of scientific certainty, that in the State, the State’s database for the November 3, 2020 election show 96,711 voters whom the state marks as having requested and been sent an absentee ballot did not return it. It is my opinion, to a reasonable degree of scientific certainty, that in my sample of this universe, 18.12% of these absentee voters in the State did not request an absentee ballot.

I obtained this data from the State via L2 Political after the November 3, 2020, Election Day. This data identified 96,771 absentee voters who were sent an absentee ballot but who failed to return the absentee ballot.

I then had my staff make phone calls to a sample of this universe. When contacted, I had my staff confirm the individual’s identity by name. Once the name was confirmed, I then had staff ask if the person requested an absentee ballot or not. Staff then recorded the number of persons who answered yes. My staff then recorded that of the 2,114 individuals who answered the question, 1,731 individuals answered yes to the question whether they requested an absentee ballot. My staff recorded that 383 individuals answered no to the question whether they requested an absentee ballot.

Attached as Exhibit 2 is my written analysis containing information from the data above on absentee voters. Paragraph 2 of Exhibit 2 presents this information.

Next, I then had staff ask the individuals who answered yes, they requested an absentee ballot, whether the individual mailed back the absentee ballot or did not mail back the absentee ballot. Staff then recorded that of the 1,626 individuals who answered the question, 325 individuals answered yes, they mailed back the absentee ballot. Staff recorded 1301 individuals answered no, they did not mail back the absentee ballot. Paragraph 2 of Exhibit 2 presents this information.

Based on these results, 18.12% of our sample of these absentee voters in the State did not request an absentee ballot.

2. From the State's database for the November 3, 2020 election and our call center results, it is my opinion to a reasonable degree of scientific certainty that 96,771 individuals whom the State's database identifies as having not returned an absentee ballot, that in my sample of this universe, 15.37% of those absentee voters did in fact mail back an absentee ballot to the clerk's office.

This opinion includes the analysis set forth above. Among the 1,626 who told our call center that they did request an absentee ballot and answered the second question, 325 told our staff that they mailed the absentee ballot back, which is 15.37% of those whom the State identified as having not returned the absentee ballot the State sent them.

Paragraph 2 of Exhibit 2 presents this information.

3. From the State's database for the November 3, 2020 election, the NCOA database, and our call center results, it is my opinion to a reasonable degree of scientific certainty that out of the 26,673 individuals had changed their address before the election, that in my sample of this universe, 1.11% of those individuals denied casting a ballot.

On Exhibit 2, in paragraph 4, I took the State's database of all absentee or early voters and matched those voters to the NCOA database for the day after election day.

This data identified 26,673 individuals whose address on the State's database did not match the address on the NCOA database on election day. Next, I had my staff call the persons identified and ask these individuals whether they had voted. My call center staff identified 1,607 individuals who confirmed that they had casted a ballot. My call center staff identified 18 individuals who denied casting a ballot. Our analysis shows that 1.11% of our sample of these individuals who changed address did not vote despite the State's data recorded that the individuals did vote.

4. From the State's database for the November 3, 2020 election and the NCOA data and other state's voter data, it is my opinion to a reasonable degree of scientific certainty, that at least 6,848 absentee or early voters were not residents of the State when they voted.

On Exhibit 2, in paragraph 1, I took the State's database of all absentee or early voters and matched those voters to the NCOA database for the day after Election Day. This data identified 6,207 individuals who had moved of the State prior to Election Day. Further, by comparing the other 49 states voter databases to the State's database, I identified 765 who registered to vote in a state other than the State subsequent to the date they registered to vote in the State. When merging these two lists and removing the duplicates, and accounting for moves that would not cause an individual to lose their residency and eligibility to vote under State law, these voters total 6,848.

5. From the State's database for the November 3, 2020 election and my staff's review of social media for voters who applied for indefinitely confined absentee voting status, it is my opinion to a reasonable degree of scientific certainty, that of the 213,215 who claimed indefinitely confined absentee voter status in the State, that in my sample of this universe, 45.23% of those individuals were not indefinitely confined on Election Day.

This opinion is taken from data developed on Exhibit 3. For this determination, I had my staff investigate using the internet and social media the individuals the State's data identified as claiming indefinitely confined status in their absentee ballot applications. The staff conducted research on the internet and social media postings by these individuals. Staff would undertake to determine if the individual was the individual listed on the database as indefinitely confined. Staff would then attempt to determine if the individuals had posted photos, images or other information demonstrating that the individuals were not indefinitely confined. For instance, if the individual's social media showed a photo on or near election day doing something inconsistent with indefinitely confined status such as riding a bike. Staff would then record the results as either "not indefinitely confined," "confirmed indefinitely confined," or "inconclusive."

These results showed that of the 213,215 who claimed indefinitely confined absentee voter status in the State, that in my sample of this universe, 45.23% of those individuals were not indefinitely confined on Election Day.

6. From the State's database for the November 3, 2020 election and comparing that data to other states voting data and identifying individuals who cast early/absentee ballots in multiple states, it is my opinion to a reasonable degree of scientific certainty, that at least 234 individuals in the State voted in multiple states.

On Exhibit 2, in paragraph 2, I had my staff compare the State's early and absentee voters to other states voting data and identified individuals who cast early/absentee ballots in multiple states. My staff located 234 individuals who voted in the State and in other states for the November 3, 2020 general election.

**VIII. EXHIBITS TO BE USED AT TRIAL TO SUMMARIZE OR EXPLAIN
OPINIONS**

At the present time, I intend to rely on the documents produced set forth above as possible exhibits.
