the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture, by using more water, or by using more fertilizers.

Another way to meet this demand is to reduce the amount of food that is wasted. This can be done by improving the way that food is stored and distributed.

There are many other ways to meet this demand, and it is important that we find ways to do so that do not harm the environment or the people of the world.

One of the most important ways to meet this demand is to reduce the amount of food that is wasted. This can be done by improving the way that food is stored and distributed.

There are many other ways to meet this demand, and it is important that we find ways to do so that do not harm the environment or the people of the world.
