2677 **PROCEEDINGS** 2 SPECIAL MASTER LANCASTER: Good morning. 2675 3 MR. QURESHI: Good morning, your Honor. SUPREME COURT OF THE UNITED STATES No. 142, Original SPECIAL MASTER LANCASTER: Good morning. 5 REDIRECT EXAMINATION STATE OF FLORIDA, BY MR. QURESHI: 6 Plaintiff, 7 Good morning, Dr. Kondolf. VOLUME XI STATE OF GEORGIA 8 Good morning. Defendants. 9 Sir, we spent some time yesterday responding to 10 questions regarding the operation of federal The above-entitled matter came on for HEARING 11 reservoirs and Army Corps of Engineers dredging. before SPECIAL MASTER RALPH I. LANCASTER, held in the 12 Today I would like to ask you some questions U. S. Bankruptcy Court, at 537 Congress Street, Portland, Maine, on November 17, 2016, commencing at 13 about why these projects were undertaken. And 8:50 a.m., before Claudette G. Mason, RMR, CRR, a 14 I'm going to provide you a document that you cite Notary Public in and for the State of Maine. 15 in your testimony at paragraph 13, and then we'll APPEARANCES: 16 direct you to particular sections. For the State of Florida: PHILIP J. PERRY, ESQ. JAMIE L. WINE, ESQ. JAMIE L. WINE, ESQ. ABID R. QURESHI, ESQ. STACEY VAN BELLEGHEM, ESQ. LAURA J. GLICKMAN, ESQ. 17 MR. QURESHI: Your Honor, with your 18 permission? CRAIG S. PRIMIS, ESQ. ZACHARY A. AVALLONE, ESQ. CHRISTOPHER J. MANER, ESQ. CHRISTIAN REIGSTAD, ESQ. For the State of Georgia: 19 SPECIAL MASTER LANCASTER: Sure. 20 BY MR. QURESHI: 21 Q. Dr. Kondolf, I have handed you what's marked as Also Present: JOSHUA D. DUNLAP, ESQ. 22 Joint Exhibit 1. Can you tell us what this 23 document is? THE REPORTING GROUP Mason & Lockhart 24 A. Yes. This is a document that's a letter from the 25 Secretary of War to the U.S. Congress. It's THE REPORTING GROUP Mason & Lockhart 2676 2678 <u>INDEX</u> 1 basically a report of the chief of the Army Corps Witness Direct Cross Redirect Recross 2 of Engineers. And it's concerning potential G. Mathias Kondolf, 2677, 2740 2714 3 projects on the Apalachicola, Chattahoochee, and Ph.D. 4 Flint Rivers. David L. Sunding, 2745 2746 2848 2898 5 **Q.** And, sir, why did you review this in connection Ph.D. 6 with your work in this matter? 7 I reviewed a number of documents like this. 8 Pretty much every year the Army Corps of **EXHIBITS** 9 Engineers would submit a report like this to Number Page Referenced 10 Congress to show what they have done to sort of 2717, 2677 JX-1 11 justify their appropriations, and in this case to JX-128 2720 12 propose a very large regional-scale project. JX-154 2866 13 This was the project that we referred to earlier 14 that involved construction of five federal dams FX-530 2690 FX-784 2762, 2799 15 on the Chattahoochee and Apalachicola, and also FX-801 2764, 2838 16 this very extensive dredging project that we FX-895 2884 17 discussed yesterday. GX-88 2708 GX-248 2700 18 And as is very clear in this document, this GX-898 2820 19 was for a regional-scale economic development GX-1276 2809 GX-1335 2722, 2740 20 plan, initiative. And they were going to have 21 a 9-foot deep navigation channel all the way to 22 Columbus, Georgia. And this is a huge scale. 23 It's the same depth as the navigation channel of the Missouri River. So for the Chattahoochee and 25 Apalachicola this was very large-scale. And this

Q. Okay. Thank you, Dr. Kondolf. Now, I want to walk through some of the sections that you alluded to. In particular, on page 3, paragraph 3, I would ask you to review

the entire paragraph if you like.

benefit commerce to the upstream ports.

And my question is going to be what is the significance of the reference to agricultural production and population in principal cities?

the first few sentences. You're welcome to read

16 A. So here, it's describing the agriculture and the 17 urban centers within the river basin. And these 18 are pretty much -- these are all cities in 19 Georgia -- one is in Alabama; the others are all 20 in Georgia. And the agriculture that's referred 21 to is predominantly in Georgia. So these would 22 be served by the navigation project.

23 **Q.** Dr. Kondolf, in the same paragraph at the bottom 24 of the page, there's a sentence that begins, 25 commerce on the river system consists. And then

THE REPORTING GROUP

Mason & Lockhart

2 Q.

Dr. Kondolf, on page 6 in paragraph 9 there is a 3 discussion about the reservoirs, construction of

4 reservoirs. Let's move from the dredging aspect

to the reservoir aspect. And right before

and some sand and gravel.

6 paragraph 10 there is a discussion about a dam in

7 the Apalachicola. Can you review that to

8 yourself and explain what that means.

9 Α. So this passage essentially states that the 10 purpose of construction of these dams is to

Chattahoochee River to provide those depths up to

11 maintain usable navigation depths in the

13 Columbus, Georgia.

14 Q. How is it consistent with your opinion that the 15 dredging and the construction of the dams was to 16 benefit the upstream states?

17 Α. Yes. These were really part of the same project, 18 deepening the channel and building the dams. For 19 the lower part of the river it was deepening the 20 channel; above that, the dams were designed to 21 provide the minimum depths. So they were all 22 part of the same project, to make possible 23 navigation up to Columbus and Bainbridge on the 24 Chattahoochee with a 9-foot deep channel.

25 Q. Sir, earlier you explained that the Apalachicola THE REPORTING GROUP

Mason & Lockhart

2680

it goes on to the following page 4. Can you review that to yourself and explain how that

3 discussion informs your understanding of the

scale of the project that was undertaken.

4 5 A. So this -- this and the subsequent sentence 6 describes commerce at the present time, so in --7 when this report was completed in the 1930's, 8 which was mostly movement of sand and gravel, 9 pulpwood to sawmills -- sorry, timber to sawmills 10 and pulpwood to a paper mill. And so that -- the 11 scale of that is much smaller than what's being 12 proposed for this project in order to serve the 13 regional interests.

Q. And this is prior to the onset of any dredging, 14 15

16 A. There was some dredging. It was relatively 17 minor.

> We looked yesterday at a plot of dredging over time. And -- and as you saw from that, beginning in 1956, the rate of dredging increased dramatically. So this was really a much larger-scale project that was done for the regional development.

Prior to that, you had more local movement of goods, like as is shown here, pulpwood and timber

> THE REPORTING GROUP Mason & Lockhart

1 was only considered a necessary outlet. And if

you turn to page 39, paragraph 140, can you

3 explain how that discussion is consistent with

your testimony.

6 I based my conclusions. And this paragraph very 7 clearly says that the -- that the commerce for 8 which the project is -- was proposed was -- it 9 said that the Apalachicola River, the downstream 10 part after the Chattahoochee and Flint come 11 together, that that river is considered to be 12 only a necessary outlet for these two streams,

A. This paragraph was one of the paragraphs on which

13 the upstream Chattahoochee and Flint; and its

14 improvement to a greater depth than now

15 authorized would be dependent on the improvement 16 of one or both of them.

So -- so only a necessary outlet for the upstream streams. So that it was not commerce on Apalachicola per se, but Apalachicola was simply the way for ships to get from the Gulf to these upstream ports.

22 Q. Dr. Kondolf, the last item I want to review on

23 Joint Exhibit 1 appears on pages 45 and 47. In 24 particular on page 45 in paragraph 158 of Joint

25 Exhibit 1 there is a discussion about the

THE REPORTING GROUP

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 2683 2685 1 movement of gasoline and kerosene by barge 1 in -- in restoration kind of planning. I 2 2 constituting, quote, by far the largest item of published another paper on that in 1995. In my 3 commerce potential for the waterway, end quote. 3 book, which is about methods in the field of 4 And then on page 47, there is a chart. Can fluvial geomorphology, tools in fluvial 5 you explain how that chart relates to the geomorphology, we have a chapter specifically on 6 preceding paragraph that I just read from? 6 historical analysis and how it's used in the 7 A. Yes. So much of this document is sort of 7 field. We have another chapter on archaeological 8 projections of what economic benefit could be 8 information as well. 9 gained by doing this massive project of dams and 9 So it's a central part of the field of 10 dredging. And the document calls out 10 fluvial geomorphology to do this kind of 11 specifically petroleum products as being an 11 historical analysis to inform your understanding 12 important item of commerce. 12 of how the river has changed. 13 And so on page 47 in this table there's a 13 Q. And based on that type of study, your review of 14 detail of the expectation of the -- of the 14 Joint Exhibit 1, as well as other archival 15 petroleum that would be carried from the Gulf up 15 records, what is your conclusion about why these 16 16 into these counties as an alternative to the ways federal projects were built and why dredging by 17 that the petroleum was being transported at the 17 the Army Corps occurred? 18 18 time. A. I think it's very clear that the reason for this 19 And as you go down on this table, it shows a 19 project, especially this scale of project, was to 20 20 number of counties in Alabama, about eight benefit the upstream ports, especially Columbus. 21 21 counties there. And then it describes the Q. Dr. Kondolf, I would now like to move to the 22 22 savings per ton in petroleum that would accrue period when dredging ceased. Can you remind us 23 from this project and others. By building the 23 when dredging by the Army Corps ceased? 24 24 A. The intensive dredging was starting in the '50's navigation project people in these counties would 25 save so much in petroleum costs because of the 25 through 1999. That was the last year of really THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2684 2686 1 transport. So it quantifies that for Alabama. 1 large-scale dredging. They didn't do any 2 For Florida it says, no saving. 2 dredging in 2000. And then in 2001 they started 3 And then it goes on, and then there are many 3 dredging; and they did some, but the barge ran 4 counties in Georgia listed with the savings 4 aground and they quit. And there was no -- no 5 5 expected in terms of petroleum costs for them for dredging after that. So that was 15 years ago 6 6 the last dredging occurred. those Georgia counties. 7 7 So by far, the benefits are clearly for --**Q.** And why might the barge have run aground? 8 8 primarily for Georgia, a little bit for Alabama. A. I think it was a relatively low water year; but 9 But in this case for the petroleum, there is no 9 certainly the river -- the riverbed was coming 10 benefit shown for Florida at all. 10 back up. 11 Q. Dr. Kondolf, did you -- do you typically rely on 11 When they did the dredging, they were digging 12 12 these types of historical documents in your field an artificially deep hole in the riverbed and in 13 13 of study? a sandy riverbed. And as most five-year-olds 14 A. Yes. As a fluvial geomorphologist, we are often, 14 could tell you from their experience at the 15 15 beach, if you dig a deep hole in the sand, the probably most of the time looking at impacts of 16 human activities on rivers, trying to understand 16 walls are going to collapse. So they were having 17 how those occurred, their nature; and then in my 17 to go back and try to re-excavate that navigation 18 specific field, looking at how we can restore 18 channel. 19 some of the function to rivers that's been 19 **Q.** And when dredging was occurring prior to 2001, 20 affected by these human activities. So in order 20 how often did it occur? 21 to understand those historical human impacts, 21 A. It occurred most years. And yesterday we looked 22 it's essential to look at these kinds of 22 at some of the diagrams showing the distribution 23 23 historical documents. of dredging up and down the river and over time.

24

25

24

25

And going back to 1986, I think I published

my first paper about using these kinds of methods

THE REPORTING GROUP

Mason & Lockhart

But -- and the dredging was limited to certain

parts of the river. It was upstream of river

And there were certain hot spots which were -- which we looked at in the diagrams yesterday, certain places that tended to shoal more than others, so required more repeated dredging.

- 7 Q. Why would they have to dredge every year?
- 8 A. Because the riverbed is recovering. You dig the 9 deep hole, and then sand fills it back in. And I 10 think when they proposed the project originally, 11 they had some idea that they could dig this deep 12 channel, and it would stay that way. But, you 13 know, these are sand banks; and they just 14 collapse. And so -- so that's why they were back 15 each -- you know, almost every year in most 16 places. It would depend on where you were, but 17 quite frequently they would have to go back and 18
- 19 **Q.** Okay. Sir, what can you tell us about how the 20 river has recovered since dredging ceased in 21
- 22 A. Since the cessation of dredging in 2001, the 23 first thing is we know that the riverbed has come 24 back up, that it would be impossible for the 25 river to have kept that deep hole in sand. You

THE REPORTING GROUP Mason & Lockhart

2688

know, we know that's going to collapse. And we also know some parts of the river have been shoaling. We lack really good survey data since then, but it's quite clear that that's been occurring.

And then we have the narrowing of the channel. So we looked yesterday at how the channel had widened. Since 2004, which are the last data that were used by the U.S. Geological Survey, we can see in the last 10 years that the river has begun to narrow through establishment of riparian vegetation, willows mostly, that are now narrowing the channel.

We also know that the riverbanks have stabilized. Back during the dredging year of -when the dredge was operating, it was disturbing sand; and so there was a lot of loose sand on the banks. And since then, with the -- with the stopping of the dredging, the banks have stabilized; and they're now creating a firm substrate. And that's beneficial for mussels because that's important habitat for the mussels to have a stable substrate.

And then the last thing that's really clear in terms of recovery is the sloughs. Many of the

THE REPORTING GROUP

Mason & Lockhart

sloughs were blocked during the dredging period. And they -- they are now -- have become more open. So the fishermen can access many of these sloughs that had been blocked during the period of active dredging with all the sand in circulation.

- 7 Q. Dr. Kondolf, there was a suggestion yesterday 8 that since dredging has ceased and, as you have 9 described, the river is recovering, what do you 10 need? Why is the river not completely recovered?
- 11 Well, the river needs adequate flow. And, you 12 know, there have been a number of restoration 13 projects that have been done that are sort of 14 small-scale projects, which are good; but the 15 underlying problem is that the river needs 16 adequate flow.

If you were to use a medical analysis, if the river is the patient, the patient has a systemic disease; and that's the lack of flow. It also has a broken arm. And you can do projects such as a lot of the small-scale projects that have been done to date to reconnect some of the sloughs, which is like fixing the broken arm, which you have to do; and that's important. But that doesn't get at the underlying systemic

> THE REPORTING GROUP Mason & Lockhart

disease, which is the lack of water.

So you have to have adequate flow to take advantage of the habitats that have been preserved, the restoration projects that have been done. You need to have adequate water.

Q. Okay. Thank you, Dr. Kondolf. I would like to stick with this topic and show you another document, if I may.

MR. QURESHI: And, your Honor, this is Florida Exhibit 530. It's not marked as 530 because I'm going to pass out a color copy. The copy in the binders is a black and white copy; but this is the same document, Florida Exhibit FX-530.

15 BY MR. QURESHI:

16 **Q.** Dr. Kondolf, this is a February 2013 letter from the United States Fish and Wildlife Service to the ACFS Stakeholders. And you may not have seen this before, but I want to direct your attention to the first page and the bottom paragraph that begins for example, and through the word environmental flow components.

> Also, I want you to have an opportunity to review the graph on the last page and paying attention to the red line on the graph on the

> > THE REPORTING GROUP

Mason & Lockhart

2691 2693 1 last page. river is not getting sufficient flow now. That's 2 2 Α. Okay. I haven't seen this letter before, so I'll what this appears to be. 3 3 Q. Okay. Why does it need that to regain its 4 Q. Sure. health? 5 A. -- take a look at the entire context. 5 Α. Well, for example, the -- the river has complex 6 MR. PRIMIS: Your Honor, while the 6 habitats on the banks and in the sloughs. And so 7 witness is reading the document, I'm going to 7 if the -- if the flows are artificially reduced, 8 8 a lot of those habitats will not be inundated. object to introducing a technical document 9 that the witness has not seen before or 9 So -- I was looking at this figure in the last 10 opined on before. And I just happen to know 10 page. Sorry. 11 from being involved in the case for a long 11 But the principle is that you can have 12 time that there were several detailed 12 excellent complex habitats along the banks of the 13 technical analyses referenced here in the 13 river or in sloughs; but if the flows have been 14 first paragraph which he has no knowledge of. 14 artificially reduced, the river won't be 15 MR. QURESHI: Your Honor, I'm simply 15 inundating those, and they won't be part of the 16 16 going to ask him how the references to the river ecosystem. 17 environmental flow components are consistent 17 Q. And can you describe what steps the State of 18 18 with his direct testimony. Florida has done to promote recovery of the river 19 SPECIAL MASTER LANCASTER: Proceed. 19 to help it regain its health? 20 20 MR. QURESHI: Thank you, your Honor. A. I think the most -- most important thing is that 21 21 A. Okay. Again, I'm not conversant in all the -the State of Florida has set aside thousands and 22 22 all the background of this. thousands of acres in the floodplain. And it's 23 Q. Certainly, Dr. Kondolf. My question simply is 23 one of the least disturbed floodplains in North 24 24 America by far. And the State has -- by buying there is a reference on the first page to minimum 25 and maximum flow duration, magnitude, frequency, 25 or getting easements, it's ensured that most of THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2692 2694 1 and the rate of change that were observed at USGS 1 the floodplain will remain undeveloped. And so 2 gages during the pre-dam period. And there is a 2 that's by far the most important thing because 3 3 reference to these being essential environmental then, as long as you have a good flow regime, the 4 flow components. 4 river has the capacity to recover. 5 5 Now, in your direct testimony on -- and And that's really the thing. Rivers have a 6 that's in tab 2 of the binder they gave you 6 tremendous self-healing potential. And that 7 7 yesterday, in paragraph 49 you write, maintaining potential is very high on the Apalachicola 8 an adequate flow regime is needed to keep the 8 because of the wide floodplain that exists. And 9 9 river healthy while it continues the natural so as long as there is a healthy flow regime, 10 process of self-healing. 10 then we can expect continued recovery of the 11 11 So I would like to understand how this is river. 12 12 consistent with the reference in the U.S. Fish In addition to setting aside the floodplain, 13 and Wildlife Service's letter. 13 the State of Florida stopped the dredging that A. Well, it appears that here they're referring to 14 14 was going on and initiated a number of 15 15 restoration projects. First they required the using pre-dam flow data as a reference for --16 against which to judge flows that you would have 16 Army Corps of Engineers to do the restoration 17 today or might be simulated for today. 17 projects, but the Corps would tend to be very 18 Q. Okay. Dr. Kondolf, how does that relate to your 18 heavy-handed and blunt, using very large river 19 opinion that the river needs more flows to become 19 equipment to do it. And then the State of 20 healthy? 20 Florida was -- began doing these projects 21 A. Well, so if I'm reading this correctly -- and, 21 themselves. 22 22 again, I might need to read through it more And they have hired my team, my colleagues at 23 23 carefully; but it looks like roughly half the the University of Florida and me, to undertake an 24 time that the recommended flows were -- were analysis of -- of restoration projects for river 24 25 achieved. And so that would indicate that the 25 mile 40 to 63 and to look at the relationship THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 2697 1 between channel change and mussel habitat there 1 having that much -- that difference in flow. Q. 2 and how that can inform future restoration. 2 Dr. Kondolf, I'm going to move to a slightly 3 **Q.** Dr. Kondolf, there was a suggestion yesterday 3 different topic; and this relates to the 2009 4 that it's only river mile zero through 23 that American Rivers document that was highlighted has not suffered from the impacts of dredging. during your cross-examination. That's behind tab 6 Are there other areas of the river that you have 6 4 of your binder. 7 observed that are showing signs of improvement; 7 Before we dive into the substance of it, can 8 8 and, if so, why? you explain why you prepared the document? 9 A. Yes. There's a lot of improvement throughout the 9 A. I was asked by American Rivers, which is a 10 river. I mentioned that the -- you know, that 10 national nonprofit environmental organization. 11 channels were largely recovering from dredging 11 Their -- their goal is to preserve and restore 12 because -- which is what we would expect. The 12 rivers in America. They asked me to assess the 13 bank stabilization, the fact that many of the 13 prospects for restoration of the Apalachicola 14 sloughs are now accessible. Fishermen can get in 14 River. 15 there. The water can get in there, which wasn't 15 American Rivers has identified the 16 16 the case during the dredging. Apalachicola as a river of concern. And, in 17 And we also see that the overwidening of the 17 fact, this year, American Rivers identified the 18 18 channel is reversing, that the channel was Apalachicola as the most endangered river in the 19 starting to narrow. 19 United States. Each year American Rivers puts 20 20 out a list of the most endangered rivers, and That's the preliminary results of our 21 21 analysis of aerial photographs since 2004. this year they identified the Apalachicola as the 22 22 Q. And, Dr. Kondolf, how are you able to most endangered. And they cited the lack of flow 23 23 differentiate the impacts of dredging on the as the primary threat to the river. 24 24 river versus the impacts of low flows? So it's in that context that they asked me to 25 A. Well, first, the lower 23 miles of the river do 25 prepare this report. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2696 2698 1 not show any effects of the dredging. So we know 1 Q. Okay. And since preparing this report in 2009, 2 2 that reduced flows there are entirely what additional work have you done in connection 3 attributable to the reduced flows from upstream. 3 with Apalachicola River? 4 A. I'm currently working with colleagues at the The lower water levels in that part of the river 4 5 5 are because of upstream reductions. University of Florida on a project for the 6 6 Florida Fish and Wildlife Commission to evaluate And that's a very important part of the river 7 7 channel change and mussel habitat from river because that has the vast majority of the swamp 8 8 forest, which is the Ogeechee tupelo which mile 40 to 63. 9 9 provides the tupelo honey. And it's ecologically And after I completed the -- this report for 10 very important for fish and whatnot. That's 10 American Rivers in 2009, I returned to the river 11 11 described in Dr. Allan's report. a few times in subsequent years as well -- I 12 12 don't remember exactly how many -- because my --As we go upstream on the river, with 13 13 Dr. Hornberger's modeling and Dr. Allan's my mother grew up in Tallahassee and around there. And so we would bring her back to the 14 biological information, Dr. Allan's report is 14 15 able to distinguish and identify the effect of 15 beach. She -- she found the beaches in 16 that reduction in flow from the -- excuse me, the 16 California too cold. So we were bringing her 17 reduction in the stage of the river, the height 17 back each summer. And so I was in the area 18 of the river, from the reduced flows from 18 anyway; I was very close, so I would go and visit

And that's potentially quite important because, for example, if you talk about a difference between 5,000 and 7,000 cubic feet per second, that's about 37 sloughs that are connected in that interval. So that's a lot of habitat that -- that would be restored by just

THE REPORTING GROUP

upstream. So he's able to quantify that.

19

20

21

TRIAL - November 17, 2016 (Vol. XI) 2699 2701 1 observations you made in 2009? 1 try to point out that -- you know, I have already 2 2 A. In 2009 in this report, I was -- in a way I was noted that the river can do a lot of 3 pitching, you know, some restoration projects. 3 self-healing. And so by analogy with a human 4 And -- and so I think since then I appreciate patient, we should emphasize natural recovery, 5 perhaps more the value of some of the projects 5 that the -- by exercise or diet or simply the 6 that had been done. And in this report I point 6 ability of the body to heal, that we let the 7 out that they were not -- they were not restoring 7 river heal itself. And when we consider large, 8 8 the process. So in a way they were not fixing intrusive projects, that we should be confident 9 the patient's systemic problems, but just, you 9 that the benefits are going to outweigh the 10 10 know, fixing the broken arms. And I had, I 11 guess, maybe more of a critical attitude in this 11 And those large, intrusive projects, those 12 12 could be likened to open heart surgery. And, 13 But since that time, for example, I have been 13 certainly, if it's really needed, it's great. 14 to some of these small projects that were done, 14 But you don't want to go into that lightly 15 which include removing sediment from the mouth of 15 because there -- it's a -- there's a lot of 16 some of these tributaries. And the purpose was 16 trauma on the system from open heart surgery. So 17 to get the cold water from the tributary into the 17 you don't -- you don't necessarily do that 18 river for the striped bass and other fish. 18 lightly. 19 And it is really remarkable. If you approach 19 And I think in relation to your earlier 20 20 those in a boat, the water is just alive with comment, something like the Battle Bend 21 21 fish. They're all hanging out in that cold water reconnection might be considered open heart 22 22 that's coming in from the tributary. surgery. So you would -- you wouldn't do that 23 23 So anyway, I appreciate much more some of the unless you felt that the river was not recovering 24 projects that had been done. Even though they're sufficiently on its own. 24 25 25 Q. And, Dr. Kondolf, you mentioned the self-healing not fixing the river's, you know, systemic THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2700 2702 1 problems, the systemic disease, at least they are 1 aspects of the river. Are you suggesting that we 2 2 providing a lot of benefit. just leave it alone, and it will be fine in some 3 And I also -- in the report I emphasize one 3 time? 4 A. of the first principles is do no harm; and so I 4 No. The self-healing -- you know, again, with 5 5 emphasized that. But I also make a strong case, the physician's analogy, self-healing requires 6 well, we should be looking at, for example, 6 good diet, exercise, fresh air. So the river --7 7 reconnecting Battle Bend, which I acknowledge in and the main thing the river needs is flow. It 8 the report is a big project. But the emphasis in 8 has the space. It has the floodplain. These 9 9 the report is, well, let's really look into this. have been preserved. What's missing now is the 10 10 And as I have observed further recovery in the adequate flow regime. And with that, the river 11 11 river and appreciate the potential impacts of the can heal itself. I mean, it's doing it already. 12 12 Q. Battle Bend reconnection that I'm proposing, If we could please turn to page 41 of GX-248, 13 13 which would be a really big project and require sir. There's a discussion of a proposal to 14 Congressional deauthorization and all this stuff, 14 remove sediment plugs from particular sloughs. 15 15 I realize that I wouldn't promote that project so Please take a moment to review that and then let 16 strongly today. That would be a difference. 16 us know if that project was undertaken. 17 Q. Okay. Thank you, Dr. Kondolf. 17 A. Okay. So this is generally about removing 18 18 sediment plugs from the inlets of sloughs or the I want to focus in on one of the items you 19 mentioned, that "do no harm" principle. And 19 mouths of tributary streams. And some of these 20 that's actually highlighted on page 11 of GX-248. 20 projects have been undertaken. The State of 21 Why don't you take a moment to review that to 21 Florida required the Army Corps to do some of 22 22 yourself and explain to us what exactly that these projects back during the days of dredging. 23 23 means. And then the State of Florida undertook some 24 A. So in this paragraph I draw an analogy to -- to 24 of these projects themselves since, which Battle 25 the physician's craft in medicine. And I -- I 25 Bend was the largest one. They opened up the THE REPORTING GROUP THE REPORTING GROUP

Α.

downstream part of Battle Bend. There were three others, Blue Springs Run, Sweetwater Creek, and Kelly Branch -- there was a dam removed on that, which was a little different. But there have been a number of projects to -- to remove the sediment.

And here, I proposed Swift Slough as one example. And at the time I wrote this report in 2009, I was not aware of an analysis done by the U.S. Fish and Wildlife Service which is reported in their 2006 biological opinion in which they actually went in the field and assessed the potential to clear the sand from Swift Slough. And they determined that it would actually have more of an impact -- negative impact than a benefit. So -- so I wasn't aware of that.

But for each of these -- and I think I make it clear in the report, for each of these potential slough projects, you would need to -you would need to do an assessment and to determine whether there's more benefit to be -to be gained versus impact from the project.

23 Q. Okay. Dr. Kondolf, you mentioned the 2006 BiOp; 24 so I would like to provide you a copy. And maybe 25 you can highlight for us the particular provision

THE REPORTING GROUP

Mason & Lockhart

A. So that would be a case. But in the context of 2 my recommendations in my report, you know -- you

3 know, I think we should be evaluating all these

possible projects; but in each case we want to --

we don't want to do more harm than good. And in 6 this case the Fish and Wildlife Service did a

7 field inspection and determined that removing the

8 sand in that location would probably do more harm to the resource than benefit.

9

10 Q. Okay. Dr. Kondolf, in your opinion, since 2009 11 has the State of Florida undertaken steps to

12 restore the Apalachicola River?

14 these projects, Blue Springs Run, Sweetwater

15 Creek, Kelly Branch, those are examples of

projects that have been undertaken. And I think

you know, they hired my group based in the

Q. Okay.

9 **Q.** It's the paragraph beginning the adverse.

10 A. Okay. That's why I recognize that.

> Okay. So this paragraph begins in which the Fish and Wildlife Service is saying that the adverse effects of low flow to the -- these mussels could be minimized by increasing the minimum flows or conducting habitat management.

And by habitat management they go on to say that they have looked at Swift Slough in 2006 to see whether they should excavate sand to -- to connect Swift Slough at a lower flow. And they said, after careful examination of the channel morphology, they determined that it would -- it would do more damage than benefit because essentially it would drain these pools that the mussels were living in.

> THE REPORTING GROUP Mason & Lockhart

And counsel represented to you that was prepared by Mr. Ted Hoehn.

You asked counsel for Georgia the date on which this presentation was prepared. He never told you. Why did you ask for the date?

Α. Well, a lot of these things, the photographs that apparently show dredging going on and the text that describes many of the impacts, those would appear to be things that were current in the 1990's perhaps or 1980's; but you wouldn't see that today. There's been a lot of recovery in the river since then. So -- so that's why I was asking about the date because it seems like a dated document.

15 Q. And Mr. Hoehn actually testified that the date 16 of the document was 2005, but some of the 17 photographs may have appeared from earlier eras.

18 He also explained that many of the issues

19 highlighted in the presentation have since been

20 remedied and are no longer in existence. How is

21 that consistent with your observations? 22

Α. I haven't looked at the entire document, but that would make sense. 2005 was when the permit was denied. And so I'm sure a lot of these slides -they had to have been taken before 2000.

- 9 entitled Additional Effects of Low Flows. I
  10 would like for you to explain how what's depicted
  11 on those slides is consistent with your personal
  12 observations.
- A. Okay. So these -- this describes -- because of
   the lower flows you are inundating less of the of the roots of trees. That's evident in this
   photograph; it looks like cypress trees and their
   roots. It also shows a slough that is apparently
   drying up. And there is a disconnected pool,
   which would have concentrations of fish.

And as these -- as the sloughs disconnect from the river and you can no longer have flowing water through them, the pools become isolated, stagnant, and usually the dissolved oxygen levels drop. And so that's a big stress on the organisms, and it can be lethal.

THE REPORTING GROUP
Mason & Lockhart

largely on data from 20 years ago or more. So obviously, you know, there are a lot of things that have changed since this report was done; and some of the conclusions I wouldn't necessarily agree with in any event. But I think it's a very good piece of work.

- 7 Q. Okay. And can you highlight any particular8 conclusion that you would disagree with?
- 9 A. I could go through and look at these, but --
- 10 Q. For example, at the bottom of page 1, there's a
  11 discussion about water level decline. What's
  12 your assessment of that particular opinion?
  - A. Okay. And this one was highlighted in the deposition and so on.

Yes. So this -- this statement says, water level decline caused by channel change is probably the most serious impact. The next sentence on the top of page 2 says, this decline has been exacerbated by long-term reductions in spring and summer flows.

I think I would not agree with the conclusion that water level decline caused by channel changes is the most significant anthropogenic impact.

One thing I think is useful to keep in mind
THE REPORTING GROUP
Mason & Lockhart

2708

So -- and then there's also a slide entitled Submerged Aquatic Vegetation Decline. So that would refer to the -- I presume to some of the -- the vegetation that's naturally submerged in the water and has a lot of ecological importance for different species. But as that is exposed as the river levels decline, then, of course, you lose that habitat.

- 9 Q. And is it your assessment that the river is10 continuing to suffer from these types of issues?
- 11 A. Yes. Yes. Especially in the dry years. It's -12 it's a -- the lack of flow is still a significant
  13 problem, yes.
- 14 Q. Dr. Kondolf, if we may now go to tab 6 of the
  15 cross-examination binder, a copy of a study
  16 prepared by Ms. Helen Light at GX-88. Have you
  17 reviewed this report before?
- 18 A. Yes, I have.
- 19 Q. And, sir, what's your assessment of the work in20 this report?
- A. I think it's an excellent report of -- the
   authors are all very good scientists; and they
   did a very good job. It's -- you know, of
- 24 course, it's a report with a certain limited

25 scope. It's 10 years ago now. And it relies

THE REPORTING GROUP

Mason & Lockhart

2710

is this report only addressed the nontidal part of the river, so river mile 20 upsteam, when in fact from river mile 23 downstream you have no effect from the channel change.

And also, the purpose of this report was simply to look at the physical changes from the dredging. It was not -- the purpose of the report was not to assess the effects of lowered flows from upstream. There is -- later in the document there is some discussion of those lower flows; and so that it's -- the importance is recognized. But that was not the focus of this report.

- 14 Q. And even if we go beyond river mile 23 and go
  15 further north, the water level decline associated
  16 with dredging, what's your assessment of that
  17 today?
- A. Well, again, there's been a lot of recovery of
   the bed, which has to happen. There is no way
   you could dredge a deep channel and not have it
   fill in with sediment in a context like this.

And we know from the analysis of Dr. Hornberger and Dr. Allan in which they essentially remove the effect of the consumption by upstream states, then you can see that there

In terms of the impact of the -- of the remaining effect of the dredging, you know, there's certainly -- that is certainly still out there; but we're -- again, we're seeing the channels recovering from that.

- 7 Q. Dr. Kondolf, I now would like to move to a 8 discussion on sloughs. You had some questions 9 yesterday about the connectivity level of 10 sloughs, and there was a focus on the Swift 11 Slough. How many sloughs are in the Apalachicola 12 River?
- 13 A. There are over 300 sloughs connected to the 14 Apalachicola River.
- 15 Q. And knowing what you know about river dynamics, 16 what is your expectation regarding the change --17 in regard to changes to the connecting flow level 18 to these various sloughs?
- 19 A. Well, first, these 300 sloughs are connected at 20 all different flows. There's a USGS report from 21 1998 that inventoried all the sloughs and 22 their -- the flows at which they were connected 23 at that time. And that report showed from about 24 4,000 cfs up to 19,000 cfs that, you know, 25

THE REPORTING GROUP Mason & Lockhart

A. I have worked a lot on rivers in California, of course. The San Joaquin River is one that I was involved in. And there's a court case on that -a pretty well-known court case. In the San Joaquin, the construction of Friant Dam actually dried the river out in two places downstream. So there used to be between two and 300,000 salmon that swam upstream the San Joaquin each year, and that run was exterminated by the dam.

But, fortunately, the policy is now to restore the salmon run. And the question is what flow regime exactly do you need for that? And that was what I worked on before -- in the settlement for that case.

And this year for the first time we have continuous flow in the San Joaquin from the dam down to the delta.

So I have worked on the San Joaquin. I have worked on the Sacramento, the Trinity River, the Klamath River, worked on the Mississippi. Internally I'm doing a lot of work on the Mekong right now. I have worked on the Rhone River and its tributaries in Europe, some -- a couple of rivers in Portugal, Thailand -- Taiwan, sorry. Well, Thailand also, and -- well, Korea.

> THE REPORTING GROUP Mason & Lockhart

2712

those different flows. So there's a wide range.

different sloughs will connect or disconnect at

So essentially at almost any flow level if you were to drop a thousand cfs, you would be cutting off 10 or 20 sloughs. So throughout the range of flows there are different sloughs that connect or disconnect.

And over time, the level at which a slough connects can change. And one of the factors has already been talked about, deposition of sand as a result of the dredging. But even without that, there are always fluctuations. It's an alluvial river. It's a dynamic system. So there would always be fluctuations in the level of when some of these sloughs would connect.

And we know that since the dredging stopped, that many of these sloughs are flushing out of sediment and that the -- they're accessible and connected at a lower level than they were before.

- 19 **Q.** And what is required to flush out additional 20 sediment and connect additional flows in the 21 sloughs?
- 22 A. River flow is needed. That's what's needed.
- 23 Q. Okay. Dr. Kondolf, can you describe for the
- 24 Court some of the other river systems that you
- 25 have studied?

THE REPORTING GROUP Mason & Lockhart

1 Q. Okay. Thank you, Dr. Kondolf.

2 Just based on your extensive study of 3 rivers -- rivers around the world, can you give us your assessment of the Apalachicola River?

5 A. In my view the Apalachicola is a real gem. It's 6 a beautiful system, highly productive, one of the 7 most biodiverse and ecologically productive 8 systems in the planet, certainly in North 9 America. And the fact that the floodplain has 10 been preserved, it has tremendous potential to 11 continue to be such an amazing place.

What it really needs is flow. It needs to have adequate flow to preserve this for future generations.

15 **Q.** Thank you, Dr. Kondolf.

16 SPECIAL MASTER LANCASTER: Recross?

17 MR. PRIMIS: Yes, your Honor.

18 **RECROSS-EXAMINATION** 

- 19 BY MR. PRIMIS:
- 20 Q. Dr. Kondolf, we highlighted yesterday in your 21 American Rivers report where you acknowledged
- 22 that low flow could have an impact on the river
- 23 as well as channel change. Right?
- A. I believe so.
- 25 Q. And I showed you the portion of your report that

THE REPORTING GROUP

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 2715 1 said that. Right? 1 letter from the Secretary of War. Can you pull 2 2 A. It's a bit of a blur; but I think so, yes. 3 Q. Okay. And I'm only asking you because you have 3 It was a loose document from Mr. Qureshi. A. Yes, I have it here. 4 done no quantitative analysis to assess the 5 relative impact on the river of channel change 5 **Q.** Okay. And you said that this suggests that all 6 caused by the Army Corps as opposed to low flow. 6 the dredging was done to benefit Georgia. Right? 7 7 That's your opinion? 8 A. Certainly from river mile 23 downstream we can 8 A. The dredging project and the construction of the 9 attribute all the reduction in river stage to 9 dams was done principally to benefit upstream 10 reduced flows from upstream because there is no 10 ports in Georgia and to some extent Alabama, but 11 channel change down there. As you go upstream 11 Georgia primarily. 12 from that point, it was not part of my 12 **Q.** Okay. I just want to point out that the document 13 responsibility to quantify the different effects. 13 we're looking at, JX-1, it bears the header 76th 14 But those that have been -- at least the effect 14 Congress First Session. Correct? 15 of the reduced flows from upstream have been 15 Yes. That appears to be right. 16 16 quantified by the Hornberger and Allan reports. **Q.** And you understand that the dam was built as a 17 Q. Dr. Kondolf, I'm just going to ask you to narrow 17 result of an Act of Congress. Right? 18 18 your answers and try to answer the question I'm A. Yes. 19 asking. So I'll just focus on river mile 23 and 19 Q. And Georgia doesn't control the Congress; I don't 20 20 think you're saying that. Right? up. 21 21 You personally, sir, have done no A. No, I'm not saying that Georgia controls the 22 22 quantitative analysis to assess the relative Congress. 23 impact between Army Corps dredging and channel 23 **Q.** And this letter is from the Secretary of War. 24 change on the one hand and low flows on the 24 Correct? 25 other. Correct? 25 A. That's correct. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2716 2718 A. So, again, the purpose of my report was not to do Q. And that person is appointed by the President of 2 2 a quantitative disaggregation of those two, no. the United States. Right? 3 Q. Are you capable of answering questions yes and 3 A. Yes. That's correct. 4 **Q.** The Governor of Georgia doesn't appoint the 5 5 Secretary of War. Right? A. It depends on the question. 6 Q. How about the last one? Can you answer that 6 A. That's correct. 7 7 **Q.** And in the last part of the cover page, he notes question yes or no? 8 8 A. Again -that he's giving this report as requested by 9 **Q.** I'll withdraw the question, Dr. Kondolf. 9 resolution of the Committee on Rivers and Harbors 10 10 A. I'm happy to expand on it, if you would like. of the House of Representatives. Correct? 11 Q. No. I'm going to ask you for the opposite, 11 A. That's correct. 12 please. 12 Q. And that's the United States House of 13 13 Representatives. True? Dr. Kondolf, with regard to low flows that 14 you have talked about, you have done no 14 A. That's correct. 15 quantitative analysis to assess whether they are 15 **Q.** Now, you mentioned on your redirect that you have 16 caused by drought versus Corps operations versus 16 done work in 2015 on the Apalachicola River. 17 Georgia's use versus evaporation. Correct? 17 Correct? 18 A. It's correct that I have not -- it was not part 18 A. That's right. 19 of my report scope to analyze what factors could 19 **Q.** And in paragraph 8 of your written direct, that's 20 be causing the reduction in flow from upstream to 20 where you have a very short description and note 21 21 the Apalachicola River. that that's what -- that you have been doing some 22 22 **Q.** Is another way of saying that no? work there. Right? 23 23 A. Yes. In answering your question, I did not A. That's correct. In paragraph 8 I briefly 24 describe that work. 24 analyze those factors.

11 of 94 sheets

25

Q. Okay. Sir, you were shown JX-1, which is the

Mason & Lockhart

THE REPORTING GROUP

25

**Q.** And when we talked about Ted Hoehn's presentation

THE REPORTING GROUP

5

8

13

16

5

7

2719

- from 2005, you said that's dated. Right?
- 2 It's out of date. That's your view?
- 3 A. Well, some of the photographs are certainly from
- 4 the dredging era, which would be, you know, 20
- 5 years ago. So --
- **6 Q.** So the photographs are dated?
- 7 A. Well, and the -- the presentation is from 2000 --
- 8 what was it, 2005 or something?
- **9 Q.** Yes, sir. And Helen Light's report from 2006
- that talked about channel change being the single
- biggest effect on the river, that's from 2006.
- **12** And you said that's outdated. Right?
- 13 A. Well, I --
- 14 Q. It's a little old?
- A. Well, I mean, it is 10 years old; and it relies
   on the -- the data it relies on is 20 years old.
- 17 Q. And your 2009 American Rivers report that talks
- about the severe degradation caused by the Army
- 19 Corps of the Apalachicola River, you said that's
- 20 somewhat outdated, too, because we're doing this
- work now in 2015. Right?
- 22 A. Well, I -- again, I think for the time these
- 23 reports were done, that they were -- it was fine.
- 24 But things -- we do get new information. As we
- 25 continue to work, we get further information.

THE REPORTING GROUP

Mason & Lockhart

- 2720
- **1 Q.** And you want the Court to rely on the fact that
- **2** you have done more work and have new information.
- **3** Right? That's why you're here?
- **4** Things have changed since 2009. We should
- 5 look at new information. Right?
- 6 A. Well, if it's relevant, certainly, yes.
- **7 Q.** Okay. Now, in paragraph 8 -- take a close look.
- 8 You don't mention any further documentation of
- **9** any work you have done for the Florida Fish and
- 10 Wildlife Commission in that paragraph; do you,
- **11** sir?
- 12 A. I'm not sure what JX-128 is, but it looks like
- 13 historical gage data.
- 14 Q. Well, it's your -- it's your testimony; and you
- **15** attached Exhibit 128 as attachment A.
- 16 A. Yes.
- 17 Q. So you can look at it. It's gage data. Right?
- 18 A. Yes. Yes.
- **19 Q.** So you have never disclosed to this Court that
- **20** you actually have done and documented additional
- work after your 2009 American Rivers report in
- the Apalachicola River. Right?
- 23 A. No. I think that -- I think that says it right
- 24 here.
- **25 Q.** Did you cite to that report?

THE REPORTING GROUP

Mason & Lockhart

- 1 You did a report, right, in 2015?
- 2 A. Yes. My team did a report -- progress report in
  - 2015.
- **4 Q.** It's not cited anywhere in your written direct
  - testimony; is it, sir?
- 6 A. Maybe not. No.
- 7 Q. It's not. And you didn't mention it with
  - Mr. Qureshi. Correct?
- 9 A. I don't think so, no.
- **10 Q.** And when Mr. Hoehn was here, you're aware he
- didn't mention that there was a 2015 report on
- the Apalachicola River and mussels that you were
  - a part of; did he?
- 14 A. I don't know. I wasn't here.
- **15 Q.** Now, you -- you -- so you acknowledge you did do
  - a report that you delivered to the Florida Fish
- **17** and Wildlife Commission in 2015. Correct?
- 18 A. Yes. I think it was November of 2015.
- 19 Q. And Ted Hoehn works for the Florida Fish and
- 20 Wildlife Commission. Right?
- 21 A. Yes.
- **22 Q.** In fact, Mr. Hoehn, is the person responsible for
- 23 mussels along the river. Correct?
- 24 A. I don't know what his responsibilities are.
- **25 Q.** Well, you know Mr. Hoehn got your report. Right?

THE REPORTING GROUP

Mason & Lockhart

2722

- 1 A. I assume so. I -- I don't know.
- **2 Q.** He's the person at Fish and Wildlife who would
- 3 get it and review it. Correct?
- 4 A. I'm not sure who would get it and review it at
  - Fish and Wildlife.
- **6 Q.** And you didn't review his testimony at all to
  - prepare for this?
- 8 A. No. I think -- I think I was shown a couple
- 9 places where he mentioned me; but, no, I didn't
- 10 review his testimony.
- **11 Q.** And none of those mentioned your November 2015
- 12 report. Correct?
- 13 A. I don't recall.
- **14 Q.** You don't. Well, the transcript will reflect
- 15 that he didn't mention it.
- MR. PRIMIS: Your Honor, may I approach?
- 17 BY MR. PRIMIS:
- **18 Q.** This is GX-1335.
- 19 And Dr. Kondolf, this is the report that you
- **20** provided to Florida Fish and Wildlife in November
- of 2015 concerning your work on river mile 40
- through 63. Correct?
- 23 A. That's right.
- **Q.** And now that you have seen it, can you confirm,
- again, you never cited this in your written

THE REPORTING GROUP

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 2725 1 direct testimony. Right? A. Yes. A. I don't remember -- well, apparently I didn't. 2 2 **Q.** And I'm not going to go through it again because 3 3 it's very similar to what was in your American 4 **Q.** Now, let's walk through this report, the one that Riverkeepers report, but take a moment and just 5 you gave to Florida Fish and Wildlife and which 5 confirm that the history you describe here is 6 was not mentioned by their representative. On 6 accurate? 7 page 2 you say at the bottom there is a history 7 A. I didn't actually write this. And it does --8 of human impacts. Correct? 8 it's not complete. I think my American Rivers 9 A. So this report had multiple authors. I -- most 9 report, that was my work; and that's probably a 10 of it was not written by me; but -- but it was 10 better reflection of my summary of the history. 11 written by other members of the team. 11 But this was done by members of the team. 12 **Q.** Okay. Dr. Kondolf, I should have asked this. 12 **Q.** The team that you were a part of? 13 Let's just look at the first page. Your name is 13 Α. Yes. 14 the third one down. Correct? 14 Q. Okay. Can you go to page 8. 15 A. That's right. 15 Α. Okay. **Q.** That's you, Mat Kondolf? 16 **Q.** Do you see the section called Channel Dredging 16 17 A. Yes. 17 and Sediment Disposal? **Q.** So you were a part of this project? 18 A. Yes. 18 19 A. That's correct. 19 **Q.** In the middle there is a sentence that starts 20 20 **Q.** And you know the context of this document? dredge deposits. Can you take a look on that --21 21 A. Yes. So this was a progress report for the -take a look at that. 22 22 for this larger study which still had a year to Right in the middle of the Channel Dredging 23 23 and Sediment Disposal paragraph on page 8. go. 24 Q. Okay, sir. 24 A. Right. Beginning dredge deposits? 25 A. So --25 Q. Right. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2724 2726 1 Q. On page 2 you outline --1 MR. PRIMIS: I'm also helping the Court out 2 2 MR. QURESHI: Your Honor, may I request here, too. 3 3 that you allow the witness to finish his SPECIAL MASTER LANCASTER: What page is 4 4 answer before you begin your next question? that? 5 5 BY MR. PRIMIS: MR. PRIMIS: Page 8. 6 6 SPECIAL MASTER LANCASTER: Thank you. **Q.** Are you done, Dr. Kondolf? 7 A. So as I said, this was a progress report. There 7 MR. PRIMIS: In the section called 8 8 was another year to go in the project. And so Channel Dredging, about halfway down. 9 this was done so that we could get paid for our 9 SPECIAL MASTER LANCASTER: All right. BY MR. PRIMIS: 10 deliverables 1 through 4. 10 11 11 **Q.** Dr. Kondolf, have you had a chance to read that? **Q.** And that's actually a good point. So thank you 12 to Mr. Qureshi for letting you finish. 12 A. The sentence or the entire rest of the paragraph? 13 13 Q. Well, I'm focused on that sentence to the end of You're currently getting paid by the State of 14 Florida to do this work. Right? 14 the paragraph. 15 A. That's correct. 15 A. Okay. Okay. 16 **Q.** And that's -- separate and apart from your expert 16 **Q.** Now, this report that you and your team submitted 17 testimony, you are a paid consultant for the 17 to Florida Fish and Wildlife is telling the State 18 State of Florida. True? 18 that there are dredge deposits. And when there 19 A. Yes. This is a research project through the 19 are high flows, the sand on those dredge deposits can be deposited back into the river. Correct? 20 University of Florida. And I'm one of the 20 21 investigators for this project. 21 A. Yes. **Q.** For which you were compensated. Correct? 22 Q. And one effect of that, I think you said, is that 22 A. That's correct. 23 that can raise the bed of the river, right, when 23 24 **Q.** Now, you have a whole section on history of human 24 that sand goes back in? 25 impacts, correct -- your team in this report? 25 A. That's true. Yes.

13 of 94 sheets

THE REPORTING GROUP

Mason & Lockhart

THE REPORTING GROUP

2727

- **1 Q.** But another effect documented right here by your
- 2 team and reported a year ago to Florida Fish and
- **3** Wildlife is that they can plug slough channels.
- 4 Right?
- 5 A. That's correct. There is -- sand is moving --
- 6 during floods there will be sand moving in and
- 7 out of the channel, in and out of sloughs. The
- 8 overall effect, since the cessation of dredging,
- 9 is there is less sand in circulation; and so the
- 10 sloughs are tending to flush out. But, yes, you
- 11 can certainly get sand going back into sloughs as
- 12 well.

14

- 13 Q. Dr. Kondolf, I would just like a clean question
  - and answer. Your team reported to Florida Fish
- and Wildlife a year ago in 2015 that sand and
- dredge spoils are still going back into the river
- **17** and can clog sloughs. Correct?
- 18 A. Yes. That's correct.
- 19 Q. Now, the last sentence of that paragraph, your --
- you and your team reported to the State of
- 21 Florida that these remaining dredge spoils are a
- persistent source of sand to the river channel.
- 23 Isn't that what you and your team told the State?
- 24 A. That's correct.
- 25 Q. And can you go to the next change -- next

THE REPORTING GROUP

Mason & Lockhart

2728

- **1** page, 9. There is a section called Observed
  - Channel Changes Caused By Human Activities.
- 3 Correct?

2

- 4 A. That's correct.
- **5 Q.** And, again, a lot of the content here is similar
- 6 to material we covered yesterday; so I won't do
- 7 it again. But I do just want to establish for
- 8 the record that you and your team outlined for
- **9** the State of Florida a year ago in an updated
- 10 report that there are many coinciding
- 11 anthropogenic activities. Correct?
- 12 A. Yes.
- ${f Q.}$  And then you go ahead and list them, like channel
- **14** widening and deepening and other factors.
- 15 Correct? Is that part of your report?
- 16 A. So you're saying that we refer to many coinciding
- 17 anthropogenic activities within a relatively
- 18 short history --
- 19 Q. Correct.
- 20 A. -- making it difficult to attribute any given
- 21 channel change to a single human activity. Yes.
- 22 Q. Now, can you go to the next page, Dr. Kondolf,
- page 10 at the bottom. There is a section called
- 24 Lower Water Levels and Less Frequent Floodplain
- 25 Inundation. Do you see that?

THE REPORTING GROUP

Mason & Lockhart

- A. Yes.
- **2 Q.** And we have a standing rule in the case that
  - lawyers are not to read lengthy passages; but I
- 4 think, with some relief from the Court, this one
- 5 is pretty important, and I want to make sure this
- one is in the record. So I hope I have developedsome goodwill by not reading.
- 8 But your team tells the State of Florida that
- 9 degradation of the riverbed and channel widening
- of the river has decreased connectivity to the
- 11 floodplain and slough channels. Correct?
- 12 A. Yes. That's what it says.
- **13 Q.** And you reported that one year ago -- almost one
- **14** year ago today. True?
- 15 A. Right.
- **16 Q.** And you say that that causes floodplain
- 17 desiccation and loss of riparian tree species
- 18 characteristic of swamps. Correct?
- 19 A. That's correct.
- **20 Q.** And that affects the tupelo trees that you
- 21 mentioned on your redirect. Correct?
- 22 A. That's correct. That's -- the tupelos are 23 mentioned, yes.
- 23 mentioned, yes.24 Q. And it has caused many previous perennial sloughs
- 25 to go dry. True.

THE REPORTING GROUP

Mason & Lockhart

2730

- 1 A. Yes. There is a reference there to the report by
- 2 Helen Light, et al., of 2006 and Darst and Light.
- 3 So it's in effect summarizing information from
- 4 those USGS reports.
- **5 Q.** And reporting it to the State of Florida Fish and
- 6 Wildlife in 2015. Correct?
- 7 A. I write that -- I think it's clear it's
- 8 referencing this -- these reports -- the
- 9 information in those reports.
- **10 Q.** And let's just focus on the next sentence because
- 11 you were talking all about mussel habitats on
- 12 redirect. You told the State of Florida a year
- ago that these impacts of the Army Corps
- 14 operations has impacted mussel habitat in the
- 15 slough channels through loss of perennially
- **16** flowing water, deposition of sediment carried in
- from areas of the mainstream -- mainstem
- 18 disturbed by dredging or outright desiccation.
- 19 Is that what you told the State of Florida
- 20 last year?
- 21 A. Yes. And, again, the citations in that paragraph
- 22 are to the USGS reports. And all this is
- 23 summarized in those USGS reports.
- 25 still dredge spoils, and they're not still going

THE REPORTING GROUP

And you're not saying, sir, that there isn't

Mason & Lockhart

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 2733 1 into the river. Right? tree-line width on figure 4. Correct? 2 A. That's correct. 2 A. No. There are still some out there, yes; and 3 some of them are still being eroded, yes. 3 Q. Now, let's go to figure 7. It's a couple pages **Q.** And they can still impact the sloughs. Right? later. It has three horizontal maps of aerial 4 5 A. Yes. I would just emphasize, too, that the scale 5 photos of the river. 6 of the sediment coming in from those is very 6 Mr. Smith put them up vertically, but in your 7 small compared to the scale of the impacts during 7 report they're horizontal. Do you see that? A. Yes. 8 the act of dredging. I think you made that point 8 9 very well yesterday talking about the scale of 9 Q. And the top one is dated 2012. Right? 10 the dredging. The scale of the sediment that 10 A. The one on the right, yes. 11 comes in from these deposits that remain, these 11 And those -- the sand that's shown, those are 12 spoil deposits that remain, is quite a bit 12 dredge spoils in 2012. Correct? 13 smaller. 13 Α. Well, they're -- they're point bars. And in some 14 **Q.** Dr. Kondolf, on the next page, page 11, there is 14 cases the point bars were augmented by sand 15 a section called Preliminary Findings of Recent 15 deposited from dredge spoils. But I would have 16 Changes. 16 to look at the individual ones here. 17 A. Yes. 17 So, for example, the second one down is -- is Q. And can I direct your attention to the middle of 18 probably a natural -- well, let's see. It could 18 19 that paragraph starting these changes. 19 be a natural point bar that developed as part of 20 A. Yes. 20 the -- these hook and bays. Certainly, the 21 Q. Can you read to the end, and then I'll ask you 21 fourth one down and the fifth one down, those 22 22 some questions. definitely look like they are fresh deposits of 23 A. Yes. 23 sand. So they would not have been dredge spoils Q. Now, you testified here that the river is in a 24 24 but, rather, recently-deposited -- well, the term 25 period of recovery; but a year ago your team told 25 is -- that's used is part of the hook, this THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2732 2734 1 the State of Florida that the river may be in a 1 feature that grows out into the channel and is 2 2 period of recovery. Correct? effectively narrowing the width of the channel. 3 3 Q. Dr. Kondolf, can you turn to page 22 of your A. That's correct. 4 Q. And, Dr. Kondolf, one thing that this paragraph 4 report, please. And I direct your attention to 5 5 points out is that very high flows, like 140,000 the bottom of the last paragraph, perhaps four or 6 6 cfs, almost flood conditions, have a good effect five lines from the bottom. 7 because they wash sand into the river. Correct? 7 A. So page 22, this is the paragraph beginning the 8 8 A. I'm not sure I follow you. daily water surface elevation data? 9 Q. That's okay, Dr. Kondolf. Let's move to page --9  $\boldsymbol{Q}_{\boldsymbol{\cdot}}$  Yes. The part beginning we chose not to use a 10 10 two pages later. Do you have a chart called further downstream station at Sumatra. Do you 11 11 see that? figure 2? Do you see that? 12 A. Yes, I see that. 12 Α. Yes. 13 **Q.** And each of those stars is a dredge spoil site as 13 **Q.** And what your team is saying here is that there 14 documented by the Army Corps in 2001. Correct? 14 are tidal effects on the river levels south of 15 A. Yes. 15 Sumatra at mile 20, and so they did not attempt 16 **Q.** Can you go two pages later, and there we have 16 to capture river level information for those. 17 another aerial shot of the river. And this 17 Correct? 18 shows, again, where the dredge spoils occur along 18 A. And I -- I didn't write this; but that appears to 19 the stretch that you're looking at from river 19 be what it says, yes. 20 mile 39 to 64. Correct? 20 And, again, I tried to make this distinction 21 vesterday -- I think it's worthwhile -- is down

21 A. Well, two pages later it seems to be figure 4, 22 which is something else. Can you specify which 23 figure you're talking about? 24 Q. Yes. Figure 4 -- oh, I'm sorry. That's 25 tree-line width. This is showing the changes at

THE REPORTING GROUP Mason & Lockhart

THE REPORTING GROUP Mason & Lockhart

near the Sumatra Gage, that lower part of the

level. You have the channel down here. So the

tides can go up and down in the channel, but they

river, you have the river floodplain at this

22

23

24

2

3

5

6

7

8

9

10

11

12

13

14

15

16

24

don't affect the surface of the floodplain. So the floodplain surface is affected by higher flows in the river.

So we have to -- it's important to distinguish the river channel itself may be tidal, whereas, the floodplain surface is only affected by riverine flows.

8 Q. Dr. Kondolf, can you turn to page 31 of your 2015 9 report to Florida Fish and Wildlife. You have a

10 section called Dredge Spoil in the Floodplain.

11 Correct?

1

2

3

4

5

6

7

12 A. That's correct.

13 **Q.** At the bottom of that page there's a picture of

14 Sand Mountain taken in 2015?

15 A. That's correct.

**Q.** It's still there? 16

17 A. Yes. As I said yesterday, Sand Mountain is still

18 there.

19 Q. And in this section you report to Florida Fish

20 and Wildlife in that first sentence that spoil

21 mounds from past dredging is likely a continual

22 source of sediment. Correct?

23 A. That's right.

25

3

24 Q. Can you go two pages back now to page 33, and

there's a section called Slough and Cutoff

THE REPORTING GROUP

Mason & Lockhart

2736

1 Inspections and Associated Photography. Do you

2 see that? A. Yes.

4 Q. Now, here is another slough that we haven't

5 talked about called Mary Slough. Right?

A. Let's see. 6

7 **Q.** The last line above the caption identifies it as

8 Mary Slough near river mile 58.5. Correct?

9 A. Yes. Figure B-5 on figures 22 to 24. Let's see.

10 Okay. I'm not sure that the photograph

11 below -- I don't think that is Mary Slough.

12 But -- that's a cutoff that's in -- natural

13 cutoff that's in progress.

14 **Q.** Okay. Well, let's go to the next page.

15 A. Okay.

16 **Q.** You're disputing, by the way, that this is Mary

17 Slough?

18 A. I don't think this is Mary Slough.

19 Q. Okay.

A. No. This is -- so near -- near the Florida 20

21 River -- I mean, if you like, we could pull out a

22 photo; and I could show you where this is. Near

23 the Florida River there's a very pronounced

24 meander bend in the river. And at flood flow

25 water flows across this meander bend. And so as

THE REPORTING GROUP

Mason & Lockhart

it does that, it erodes out -- it's eroding out a

This is a natural part of river dynamics is

that you can get what are called meander cutoffs. So you have a meander bend; and it can cut off in two ways, either a neck cutoff or it's just bank erosion that eventually cuts through. Or you can have what's called a chute cutoff -- C H U T E, not spelled as you would expect. And this -- and this is where during the flood flows the river begins carving out a shortcut channel.

And that's what's happening here. I would expect, you know, in 5 or 10 years' time that the river might be flowing through this channel instead of the existing river. And that's just a natural part of river dynamics.

17 Q. Dr. Kondolf, can you now turn to page 44 of your 18 November 2015 report. And just to put it in 19 context, if you look at page 43 first, you will

20 see that we're in a section called Mussels.

21 A. Yes.

22 **Q.** And then go to page 44. And I want to direct

23 your attention to the bottom of page 44, and in

particular the sentence about five lines from the

25 bottom that starts this survey.

THE REPORTING GROUP

Mason & Lockhart

1 A. Okay.

> 2 Before we go into this, the Latin name A

3 neislerii, do you see that?

A. Yes. 4

7

10

18

5 **Q.** That is the fat threeridge mussel. Correct?

A. I believe so. I'm not an expert on mussels, but 6

I think I recall seeing that that is the Latin

8 name.

9 **Q.** You just testified on redirect about the work

Dr. Allan was doing on mussels. Correct?

11 Α. Yes.

12 Q. So you're familiar enough --

13 Α. Yes.

14 **Q.** -- to give testimony to the Supreme Court about

15 it?

16 A. Yes.

17 Q. Okay. In this report of November 2015, you

report to the Florida Fish and Wildlife

19 Commission that the fat threeridge is likely one

20 of the most abundant mussels in the middle

21 reaches of the Apalachicola River. Right?

A. Again, perhaps we should --22

23

Q. My question, sir, was did you report what I just

24 said before the Florida Fish and Wildlife

25 Commission?

THE REPORTING GROUP

Mason & Lockhart

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 1 MR. QURESHI: Again, the witness needs 1 strong scientific basis for evaluating 2 2 to answer your question before you begin the restoration projects that would benefit mussels 3 next question, please. 3 in this reach from river mile 40 to 63. And this 4 reach has a lot of what are called hooks and MR. PRIMIS: Your Honor, I won't debate 5 with counsel. Can I just ask you to have the bays. And it's a way that the river channel has 6 witness give an answer to my narrow question? 6 been changing apparently to renarrow the 7 SPECIAL MASTER LANCASTER: Just so you 7 riverbed. That seems to be the result of these 8 should understand, if you can answer the 8 channel changes. 9 question yes or no, do so. Your counsel can 9 Q. We went through the report, and counsel for 10 come up and ask for clarification. 10 Georgia took particular sentences out of 11 A. Okay. I think it would be the least misleading 11 particular sections. Can you tell us as a whole 12 if I pointed out this is a report that was done 12 what's the relationship between this report and 13 by multiple authors, and I did not write this 13 the conclusions you reached in your direct 14 section on mussels. Our mussel expert on the 14 testimony? 15 team, Michael Gangloff, wrote the section on 15 Α. The conclusions in my direct testimony stand. I 16 16 mussels. So this was not my work here. don't -- there's -- this report is -- well, 17 Q. Dr. Kondolf, you and your team submitted a report 17 there's some aspects here that -- for example, 18 18 the -- we talked -- in here we report on the -a year ago to Florida Fish and Wildlife saying 19 that the fat threeridge was likely one of the 19 our analysis of 2013 aerial imagery showing 20 most abundant mussels in the middle reaches. 20 that there has been narrowing of the river and 21 21 Correct? colonization by vegetation. And that -- that 22 22 A. That is in our report, yes. Again, it's not a informed my expert opinion that -- some of the 23 section that I wrote or even reviewed; but 23 experience that I gained from doing this work for 24 that -- that's the opinion of -- of my colleague 24 Florida Fish and Wildlife Commission. 25 25 **Q.** And the narrowing of the river and the obviously. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2740 2742 1 Q. And you said your colleague is Michael Gangloff, 1 colonization represents what? 2 who is a mussel expert who included this in your 2 A. That's a part of the recovery of the river from 3 joint report to Florida Fish and Wildlife. 3 the past impacts. Q. And was required for the river to fully recover? 4 Correct? 4 5 5 A. That's correct. A. To fully recover the river needs flow. It needs MR. PRIMIS: No further questions, your 6 6 adequate flow. 7 7 **Q.** Okay. Thank you, doctor. Honor. 8 8 SPECIAL MASTER LANCASTER: Redirect? MR. PRIMIS: No further questions, your 9 REDIRECT EXAMINATION 9 Honor 10 10 BY MR. QURESHI: SPECIAL MASTER LANCASTER: Doctor, 11 **Q.** Very briefly, Dr. Kondolf. What was the purpose 11 you're going to have to help me here. I'm 12 of this work that's memorialized in GX-1335? 12 not sure that I'm familiar with the topics. 13 13 A. This was a progress report, so we had actually But GX-1335 bears your name in part as --14 just started our study in the summer. And we had 14 THE WITNESS: Yes. 15 a deadline to produce these, you know, 15 SPECIAL MASTER LANCASTER: -- as an 16 deliverables, they're called, reports or datasets 16 author. 17 that we -- we were to provide in order to get 17 THE WITNESS: Yes. 18 paid for our initial section of work. And so 18 SPECIAL MASTER LANCASTER: And your 19 that's what this reflected. 19 testimony is that you did not write certain 20 So this was not a final report in any way. 20 parts of this; is that correct? 21 It was simply the deliverables report, 21 THE WITNESS: That's right. 22 22 SPECIAL MASTER LANCASTER: Did you read

- 1 A. Yes. Again, just so we're tracking the way --
- when you say impact, what I'm hearing is change.
- 3 So I analyzed the fact that there was injury, but
- 4 I didn't analyze a change.
- **5 Q.** Can you turn to page 15, line 1, of your
- **6** deposition, Dr. Sunding.
- 7 MR. PRIMIS: And, Mr. Smith, could you
- 8 play clips 6, 7, and 8 which go from 15, line
- **9** 1 to line 11.
- **10** (Whereupon the video was played.)
- 11 BY MR. PRIMIS:
- 12 Q. Were you asked those questions --
- **13** MR. PERRY: Your Honor?
- 14 BY MR. PRIMIS:
- **15 Q.** -- and did you give that answer?
- **16** MR. PERRY: I'm sorry. Your Honor,
- 17 might I note that the transcript actually
- 18 reads just a bit differently than the clip
- 19 that was played because the clip omits the
- 20 objections.
- 21 BY MR. PRIMIS:
- ${\bf 22} \quad {\bf Q.} \quad \mbox{Were you asked those questions, and did you give}$
- that answer?
- 24 A. Yes. And I think it's consistent with what I
- 25 just said.

THE REPORTING GROUP Mason & Lockhart

- 2752
- **Q.** Now, Dr. Sunding, you conducted a survey in this
- 2 case which asked residents of Florida, Georgia,
- 3 and Alabama questions about the resources in the
- 4 ACF Basin. Correct?
- 5 A. I did. That's right.
- **6 Q.** Okay. We're going to come back to this later,
- 7 but I just want to ask you; apart from the
- 8 survey, you would agree that you have not
- **9** attempted to quantify in any economic or monetary
- sense the impact on Florida of Georgia's
- 11 consumptive water use. True?
- 12 A. That's largely true. I would add one exception
- 13 to that. In my direct testimony I also noted the
- 14 amount of resources that the State of Florida has
- 15 spent conserving land in the Apalachicola region.
- **16 Q.** Dr. Sunding, can you turn to page 16, line 21,
- of your transcript, and going through page 17,
- 18 line 1. And does it say there, apart from the
- 19 survey, have you attempted to quantify in any
- 20 economic or monetary sense the impact on Florida
- of Georgia's consumptive water use?
- 22 And after an objection to form, you said,
- nothing comes to mind, no.
- **24** Were you asked that question, and did you
- **25** give that answer?

THE REPORTING GROUP

Mason & Lockhart

- 1 A. Yes. And I stand by that. You were asking me
- 2 about what I quantified. I added one -- I added
  - one -- you know, one qualification to the answer,
- 4 which is that I also reported on what others
  - testified about the amount of resources that
- 6 Florida has dedicated to preserving land in the
- 7 Apalachicola.
- **8 Q.** I would just like a clean answer to this
- **9** question. Were you asked the question posed at
- 16, 21; and did you give the answer at line 17, 1
- 11 of your deposition under oath?
- 12 A. Yes. Absolutely.
- **13 Q.** I want to ask you some questions now about
- **14** causation, sir. Okay?
- 15 A. All right.
- **16 Q.** You would agree that as a general matter, it is
- 17 important to eliminate other variables that could
- have contributed to the harm alleged. Correct?
- 19 A. Could you help me out with the context? Is that
- 20 just a general statement or with respect to some
- 21 specific situation?
- **22 Q.** Dr. Sunding, can you answer that question?
- 23 A. I can't without more detail.
- 24 Q. Okav.

1

Mason & Lockhart

- **2 Q.** Can you turn to your deposition transcript where
- **3** it appeared you knew what I was talking about.
- **4** Page 19, line 3.

about.

- 5 MR. PRIMIS: And, Mr. Smith, could you
- 6 play clip 228.
  - (Whereupon the video was played.)
- 8 BY MR. PRIMIS:
- **9 Q.** Were you asked that question, and did you give
  - that answer?
- 11 A. Yes. In the context of a much longer discussion
- 12 about biological issues.
- **13 Q.** Dr. Sunding, you have not personally undertaken
- 14 to do an analysis of what other -- of eliminating
  - what other variables could have contributed to
- **16** the harm alleged in this case. True?
- 17 A. I think that's right.
- **18 Q.** Now, I understand that you have had discussion
- with other Florida experts about causation; but
- to be clear, you personally are not offering any
- 21 expert opinion on whether Georgia's water use has
- 22 caused the harm to Florida that's alleged.
- 23 Correct?
- 24 A. I think that's right. I'm an economist, not a
- 25 biologist or ecologist.

We have a tab in your binder called Florida  Experts FLA Experts. It's all the way at the back.  Just let me know when you're there,  Dr. Sunding.  The first page says Greenblatt. Correct?  Oh, it is way at the back.  Way in the back.  Got it.  I'm just going to give the Court a moment to get there.  MR. PRIMIS: Are you there?

1 Greenblatt's direct testimony. And do you know 2 who Dr. Greenblatt is?

3 A. No. I don't.

Q. Your not aware that she's Florida's expert on salinity patterns in Apalachicola Bay?

6 A. No.

13

25

7 Q. Dr. Sunding, I just want to ask you as a 8 follow-up to your testimony that Georgia's

9 reduction in use will provide substantial

10 environmental benefits, did you take into account

11 Dr. Greenblatt's testimony that the remedy

12 scenario she ran would result in somewhere less

than 1 part per thousand reduction in salinity in

14 Apalachicola Bay?

15 A. No. I never have seen this before. I don't know 16 who she is.

17 **Q.** So you're not aware that the white parts depicted 18 in Dr. Greenblatt's exhibit indicate less than 19 1 part per thousand with the cuts that --

20 MR. PERRY: Objection, mischaracterization.

21 A. No, I'm not familiar with this document at all.

22 Q. Okay. Let's go to the second tab -- I'm sorry, 23 the second slide behind Florida Experts. And we

24 have excerpted a chart here from Dr. Allan's

expert report regarding the tupelo trees. Have

THE REPORTING GROUP Mason & Lockhart

1 you seen this one before?

2 A. I may have seen this one before. I also spoke

3 with Dr. Allan about how he was quantifying

4 impacts. But this particular table does not look

5 familiar.

Q. All right. Now, with regard to the substantial 6

7 environmental benefits to Florida, you're aware

8 that when Dr. Allan ran the remedy scenario with

9 the 50 percent reduction in agricultural

10 irrigation, that he showed that for the tupelo

11 trees on his 10 percent metric, you got 29 fewer

12 days of harm over 16 years. Were you aware of

13 that?

14 A. Again, you're picking a table out of his report.

15 I'm not familiar enough with this to give an

16 opinion about it.

17 **Q.** Are the 29 days benefit to the tupelo trees over 18

16 years a substantial environmental benefit?

19 A. Well, when I made that statement, I wasn't

20 referring just to the tupelo trees. There are,

21 as you know, a number of species that Dr. Allan examined.

22 Q. Okay.

23

24 A. So it would have -- the tupelos would have been

25 part of it, but not the entirety by any means. THE REPORTING GROUP

Mason & Lockhart

Q. When -- how about Dr. Wilson White; are you

2 familiar with him?

A. No. 3

Q. Let's turn to the next demonstrative.

Now, you don't recognize Dr. White as an

6 oyster on -- I'm sorry, an expert on oysters?

7 Α.

10

21

24

7

2760

8 **Q.** And you're not aware that he ran the remedy

9 scenario through his model to see what kind of

change there would be in oyster biomass?

11 Α. No. He was not one of the experts that I

12 interacted with.

13 **Q.** So I take it then you're not familiar with the

14 chart we have included here from page 50 of his

15 direct testimony which shows a maximum change in

16 oyster biomass, running the 50 percent reduction

17 scenario, of a little over 1 percent?

18 A. No. I have never seen this table before or this 19

figure before.

20 Q. And so you have no opinion whether Dr. White's

1 percent change, would that type of reduction in

22 Georgia be a substantial environmental benefit.

23 Correct?

MR. PERRY: Objection, mischaracterization.

25 A. No.

> THE REPORTING GROUP Mason & Lockhart

Q. Now, can you turn to FX-784. It's your first

2 expert report, and Florida gave it an exhibit number for identification. So it's the first 3

4 tab.

5 A. All right. I see it.

6 Q. Now, after having been involved in this case on

and off for a decade, this was the initial report

8 that you submitted in this matter. Correct?

9 A. Yes, it was.

10 Q. Page 1 of the report has your statement of

11 opinions -- it's actually page 3.

12 A. Yes, it does.

13 **Q.** And then if you go to page 9, there's a table.

14

15 A. Yes, there is. I think it's the same one you

16 excerpted in the handout you gave me earlier.

17 Q. Correct, sir.

18 And you include in your statement of opinions this table which shows four different scenarios 19

20 for conservation in Georgia of a thousand cfs at

peak summer streamflow. Correct? 21

22 A. That's right.

23 Q. Now, your report back on page 86 also has a much

24 smaller table that you said could get you up to

25 1500. Correct?

> THE REPORTING GROUP Mason & Lockhart

		TRIAL - Novembe	er 17, 2	016 (\	/ol. XI) Florida v. Georgia
		2763			2765
1	A.	Yes. I looked at both a thousand and 1500 cfs	1	Q.	So here in paragraph 2 in May of 2016 you
2		reductions.	2		outlined a scenario to get to 2,000 cfs in peak
3	Q.	And when you summarized four different scenarios	3		summer streamflow. Correct?
4		in the statement of opinions up front, you	4	A.	That's right.
5		included these four scenarios for a thousand.	5	Q.	Now, the 2,000 cfs scenario and now, it might
6		Right?	6		just be easier to flip use these the charts
7	A.	That's right.	7		in the sleeve.
8		Now, did you review the testimony of	8	A.	All right.
9	•	Dr. Hornberger in this trial?	9	_	I'm now focusing on the May report, which is the
10	A.	I did.	10	•	second page of this little handout.
11		So you saw the transcript of his testimony here	11		When you did the 2,000 cfs scenario, your
12	•	in Maine?	12		report assumed hydrology conditions in 2011.
13	Α.	Over the live testimony here in court, no	13		Right?
14	_	Yes.	14	A	That's right.
15	-	I don't think I saw that.	15		And just so the Court understands, that
16		Okay. You should get it. There are draft	16	٠.	essentially means the rainfall and the runoff and
17	⋖.	transcripts which are actually outstanding	17		the usage of 2011. Correct?
18		quality, and you can review them.	18	Δ	That is right.
19		So Dr. Sunding, when Dr. Hornberger was here,	19		
		, , , , , , , , , , , , , , , , , , ,		Q.	And you evaluated 2011 hydrology, and then you
20		he testified that in all of his modeling, the	20		said we can get 2,000 if we use those
21		only thing he modeled from you was a 1,000 cfs	21		assumptions. Right?
22		scenario. Are you aware of that?	22	A.	Yes. So there's a given level of demand of 2011
23	A.	That that is consistent with my memory. So it	23		hydrology, meaning that amount of precipitation;
24	_	wouldn't surprise me that he would say that.	24		and then I considered reductions from the amount
25	Q.	Now, you did a second report in this case.	25		of consumptive use that occurred in 2011.

1 Q. And you know that Dr. Flewelling estimated 1 Georgia's total M & I consumption over a period 2 2 3 of about 20 years. Correct? 3

A. Yes. I know that he did that.

5 Q. Okay.

6 MR. PRIMIS: Mr. Smith, can you put

7 up --

8 BY MR. PRIMIS:

9 Q. Actually, we have a demonstrative of this. If 10 you go to the tab called Georgia

11 Demonstratives -- I'm sorry, Sunding

12 Demonstratives. We gave you your own tab.

13 The first one is a depiction of figure ES.2

14 from Dr. Flewelling's expert report at page 3.

15

16 estimated Georgia's M & I consumption at just a

And if you look at 2011, Dr. Flewelling

17 shade over 500 cfs. Right?

A. I think that -- this is, yes, information that 18 19 was in Dr. Flewelling's report from the 20 consumptive use database.

21 **Q.** Right. I just want to get at the figure. He's 22 at about 500 cfs. Right?

23 A. It is.

25

17

18

19

20

21

22

23

24

24 **Q.** Now, we drew a line across here that represented

your 545 cfs number for M & I in 2011. And you

THE REPORTING GROUP

Mason & Lockhart

21

24

2768

1 will see, sir, that it is higher than the total 2 amount of consumption estimated by 3 Dr. Flewelling. Isn't that right?

4 A. No. That's not right.

5 **Q.** For --

6 A. You're comparing things that should not be 7 compared.

**Q.** Okay. Well, then you can clarify that when 8 9 Mr. Perry is up. But right now, I want to ask 10 you does the red line showing your 545 cfs number 11 exceed the number calculated by Dr. Flewelling 12 using the methodology here in his table, which 13 was about 500 cfs?

14 A. Well, it's difficult for me to answer because I'm 15 not proposing a 545 cfs reduction in every year, 16 which is what a line implies.

> There are a number of other errors in this comparison, but I do agree with you that the -the M & I reduction that we just added up is 545; and that is greater than the amount of consumptive use that's shown on this table from this figure. But I do hope we come back to this because I don't think that's an accurate way to compare things.

25 Q. Okay. And I just want to be very specific. Your THE REPORTING GROUP

Mason & Lockhart

545 cfs reduction assumed 2011 conditions.

Right?

A. Yes.

Q. And I'm just asking about 2011 from

5 Dr. Flewelling. Your reduction under 2011

6 conditions exceeds what Dr. Flewelling calculated

7 as Georgia's consumptive use in 2011. Right?

8 A. It exceeds his calculation of this part of

9 Georgia's consumptive use.

10 Q. Right. The M & I part?

11 A. No. Even beyond that. There is M & I

12 consumptive use that's not shown in this figure.

13 Q. Now, I take it, Dr. Sunding, you're not

14 suggesting that metro Atlanta should cut its

15 water use by 100 percent. Right?

16 A. No. I have never suggested that.

17 And let's be careful when we go back and 18 forth between water use and consumptive use, 19 because they are different, as you know.

20 Q. Dr. Sunding, did you ever go back to

Dr. Flewelling and say, hey, I'm looking at

22 streamflow contributions in peak summer months of

23 546 out of M & I reductions. Does Georgia even

use that much on M & I?

25 Did you have that conversation with him?

THE REPORTING GROUP

Mason & Lockhart

2770

1 A. Sure. We have had conversations all throughout 2 the process of developing my analysis.

3 Q. Can you turn to page 126, line 16, of your 4 deposition, sir.

5 MR. PRIMIS: And, Mr. Smith, I would ask

6 you to play the clip from 126, line 16 to 7

line 21.

8 (Whereupon the video was played.)

9 BY MR. PRIMIS:

Q. Dr. Sunding, were you asked that question; and 10

11 did you give that answer?

12 A. I did.

13 Q. Okay. Now, I would like to look at the estimated

14 M & I savings that you included in your direct

15 testimony in this case. Okay?

16 A. So you're talking the direct testimony is the 17 last report that I did?

**Q.** The --18

19 A. The most recent one?

20 **Q.** The most recent one we think of as your written 21 direct testimony.

22 A. All right. Got it.

23 **Q.** It's not an expert report.

24 And that one appears in paragraph 90 of your

25 written direct. And, again, I'm still going to THE REPORTING GROUP

2771 1 be focusing on M & I. Do you see that? 1 use, yes; that's the number that was on his 2 2 A. Yes. 3 **Q.** Now, if we add up those same three items from 3 Q. And so 315 is still about 60 percent of what 4 your written direct testimony, that being leak Dr. Flewelling had in this figure. Correct? 5 abatement, reduced municipal outdoor use, and 5 Of consumptive use, yes. 6 eliminate net basin exports, the combined effect 6 Q. Okay. So now, I want to switch from M & I over 7 of those has shrunk. Right? 7 to agricultural usage. And we can stick with 8 A. Yes, because of examining different policies. 8 your 2,000 cfs scenario. And this, again, is 9 Q. Right. You changed the policies you examined; 9 page 3 of the handout or paragraph 90 in your 10 and you went from 546 cfs reduction for M & I, 10 written direct. 11 and you reduced it to 315. Correct? 11 I find it easier to use the handout. 12 A. That's right. 12 A. Okay. 13 Q. And just let's be fair, Dr. Sunding. You didn't 13 **Q.** But I'll defer to everyone's preference. 14 just change the policies; right? You corrected 14 A. Okay. So I would like to turn to the right page 15 some errors that reduced the number? 15 in my direct. So it's page 3 of the handout 16 16 A. That's right. That's true as well. There or -- what's the right page in my direct? 17 were -- there were at least two issues that I can 17 Q. It's paragraph 90. 18 18 think of now that I corrected; and then I also MR. PERRY: Page 44. 19 changed the policy. I considered different 19 MR. PRIMIS: Or page 44. 20 20 implementation of the outdoor water use MR. PERRY: The handout, I believe, is 21 21 restrictions. from your report -- the first report. 22 22 **Q.** And you changed that policy that you looked at MR. PRIMIS: This -- your Honor, 23 after the time of your deposition. Correct? 23 this was a source of some confusion at 24 24 Dr. Sunding's deposition because there are A. Sure. But my testimony was always about 25 evaluating economic impacts across a whole range 25 different sets of numbers. Just -- I want to THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2772 2774 1 of policies. 1 be clear what I have handed out. 2 Q. Dr. Sunding, when you went from 546 cfs for M & I 2 BY MR. PRIMIS: 3 and reduced it to 315 through error corrections 3 **Q.** This three-page demonstrative tucked in the 4 and policy changes, you reduced the amount by 42 4 sleeve, Dr. Sunding, the first table is from your 5 5 percent of what you were recommending Georgia do February expert report. And it's the four 1,000 6 to conserve for M & I. Correct? 6 cfs scenarios. The second page is the 2,000 cfs 7 7 A. Well, there are a couple of issues. I'm not reduction chart from your second expert report. 8 recommending anything. I'm examining the cost of 8 And the third page is the 2,000 cfs chart from 9 9 your written direct. different conservation scenarios. 10 10 A. Yes. But, yes, it did go down by -- I'll accept 11 11 your number -- 42 percent. MR. PRIMIS: And, your Honor, they are 12 **Q.** And I do want to pause on something you just 12 all a little different; so it matters which 13 13 said. It is true, sir, that you're not page we're on. 14 recommending any particular policy to the Supreme 14 BY MR. PRIMIS: 15 Court; you're just evaluating different potential 15 Q. And I will just say that for the third page of 16 options and their costs. Correct? 16 this demonstrative, the 2,000 cfs from your 17 A. Yes. And I can offer testimony and have about 17 written direct, it indeed appears on page 44 of 18 which policies might be the most economical for 18 your written direct testimony. Correct? 19 Georgia to implement. But it's the State of 19 A. Yes. Okay. 20 20 Florida that's bringing the complaint. Now, I'm with you. 21 **Q.** Now, we don't need to put the chart back up; 21 Q. Okay. Now, in the 2,000 column you have six 22 22 but you will recall for 2011 conditions different scenarios that sum up to a certain 23 23 Dr. Flewelling had about 500 cfs of consumptive amount of savings in agricultural water usage. 24 use by metro Atlanta. Right? 24 Right? 25 Understanding that that's not total consumptive 25 A. I would just describe it a little differently. I THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

775

- 1 have six different conservation measures that
- 2 produce different amounts of consumptive use
- 3 savings --
- 4 Q. Right.
- 5 A. -- in agriculture.
- **6 Q.** That's fair. The first three on the chart are
- 7 M & I, and then everything under eliminate net
- **8** basin exports is agricultural?
- 9 A. That's correct.
- **10 Q.** And there are six agricultural conservation
- **11** scenarios. Right?
- 12 A. Yes.
- 13 Q. Now, when you add up in the 2,000 column all the
- agricultural ones, you get 1,685 cfs savings in
- 15 peak summer streamflow under your direct
- **16** testimony. Correct?
- 17 A. Yes. And just so I'm clear, are you referring to
- 18 the column that's labeled .6 Connectivity?
- 19 Q. Yes.
- 20 A. All right, yes. I will take your word for the
- 21 math.
- $\textbf{22} \quad \textbf{Q.} \quad \text{That's the only column you have got that adds up}$
- 23 to 2,000. Correct?
- 24 A. That's right.
- **25 Q.** So that's -- it sums up to 1,685 cfs in peak

THE REPORTING GROUP

Mason & Lockhart

- 2776
- 1 summer streamflow savings. And, Dr. Sunding, you
- 2 know that Georgia's agricultural water use is
- **3** actually lower than 1,685 cfs; is that right?
- 4 A. I don't know that, no. I think that's wrong.
- **5 Q.** Okay. And let's say even under your scenario, if
- 6 you wanted to reduce agricultural water use by 50
- 7 percent in Georgia, that would imply that Georgia
- **8** would have to use at least 3,370 cfs in peak
- 9 summer streamflow. Correct?
- 10 A. If -- so if I wanted to reduce streamflow
- 11 depletions by -- give me the question again.
- 12 Q. Sure.
- 13 A. Let me make sure I'm getting you.
- **14 Q.** If you have a recommendation -- if you have a set
- of -- not recommendations, sorry. If you have a
- set of scenarios that total up to 1,685 cfs
- 17 benefit at peak summer streamflow, you would --
- 18 Georgia would have to use at least twice that if
- you were targeting a 50 percent reduction.
- 20 Right?
- 21 It's just simple math.
- 22 A. Well, yes. But the thing I'm thinking about, not
- 23 all agricultural water use has the same impact on
- 24 streamflow, as you know. Pumping right next to
- 25 the stream has more connectivity than pumping

THE REPORTING GROUP

Mason & Lockhart

- 1 further away. So I would have to think through
- 2 that aspect of it.
- **Q.** With the qualification you just gave, you would
- **4** actually need to have more Georgia water use than
  - double 1,685, correct, because you don't get one
- **6** to one out of the groundwater. Right?
- 7 A. I think that's right, yes.
- **8 Q.** All right. So if the charge here were, Georgia,
- 9 you got to cut by 50 percent -- or you would have
- 10 to actually cut more -- Georgia would have to use
- 11 more than 3500 cfs for agriculture. Right?
- 12 A. Under the assumptions you just laid out, yes.
- 13 Q. Now, can you turn in your binder to the tab
- 14 called Complaint -- Florida Complaint, and turn
- to page 21. Do you see the Prayer For Relief on
- page 21 of the Complaint?
- 17 A. I do.
- **18 Q.** In the second paragraph Florida told the Supreme
- 19 Court that it would like it to enter an Order
- 20 capping Georgia's overall depleted water uses at
- the level then existing on January 3, 1992. Do
- you see that?
- 23 A. Yes.

1

2

- **24 Q.** And you were working with Florida at the time
- 25 this complaint got filed. Right?

THE REPORTING GROUP

Mason & Lockhart

- A. Yes. I didn't have a role in writing this, of
- course; but I had been doing work for Florida for
- 3 a while before this was written.
- 4 Q. You were aware that Florida was seeking a return
- 5 to January 1992 depleted water use levels in
- **6** Georgia?
- 7 A. I'm not sure if I did or not.
- **8 Q.** You have become aware of it during this case
- 9 though. Right?
- 10 A. I have heard 1992 come up. My feeling is that's
- 11 a -- that's largely a legal issue. I haven't --
- 12 I haven't given that an excessive amount of
- 13 thought.
- **14 Q.** You haven't calculated anything to figure out
- what 1992 conditions were?
- 16 A. No. I have some testimony on that point in my
- 17 first report, about the cost of reducing
- 18 consumptive use relative to different baselines.
- 19 And I did calculate the cost of achieving a given
- 20 level of streamflow starting at 1992 levels.
- 21 Q. You anticipated where I was going. So,
- 22 Dr. Sunding, you would agree with me that when
- you proposed the 1,000 cfs reduction, you
- 24 understand that that would have actually taken
- 25 Georgia to a level of water use lower than 1992

THE REPORTING GROUP

2779 2781 1 levels. Correct? 1 at 1992 levels, it would cost them less to get to 2 2 A. I'm not sure of that. 1,000 cfs streamflow benefit now. Right? 3 **Q.** Well, you recall in your expert report you 3 A. estimated how much it would be to get to 1992. 4 Q. And implicit in that, isn't it, sir, that you 5 would have to have a greater reduction at the 6 A. I -- that's not quite what I remember. 6 1,000 cfs level than to be at the 1992 level? 7 Q. Okav. 7 Yes. And I'm going to answer it this way. I 8 A. I'm trying to turn to the page where I did that. 8 think I get your question, but I really want to 9 Q. Sure. Turn to page 7 of your first report, which 9 make sure we're on the same page with this. 10 is the first tab, FX-784. 10 What I wrote about in my first report was we 11 All right. I'm at page 7. 11 have three levels of streamflow. There's the 12 **Q.** And on page 7 you analyze the cost of your 1,000 12 2011, 1992, and then where you get to if you 13 cfs scenario, assuming that Georgia's irrigated 13 subtract a thousand cfs off of the 2011 actual. 14 acreage have remained at 1992 levels. Correct? 14 And so I examined the cost of going from 2011 15 A. Well, I think it's actually -- just so we're 15 actual to 1,000 minus that, and then from 1992 16 tracking, I think it's actually sort of the 16 actual down to the same level of streamflow. But 17 inverse of what you said. I was starting from a 17 if Georgia had capped its consumption at 1992 18 1992 level of consumption and then going down to 18 levels, my testimony is that it would cost less 19 the same level of streamflow you would get to by 19 to reach that same streamflow target than if it 20 20 reducing by a thousand from 2011. allowed consumption to grow to what it actually 21 21 **Q.** Right. And this is getting a little confusing, 22 22 so I'm going to try and clarify it. You looked Q. And because there is a cost to go from 1992 23 23 at how much it would cost to get from 2011 down levels down to a 1,000 cfs level, you would agree 24 to 1992. Correct? 24 that you need to cut more than 1992 levels to get 25 A. I didn't cost that. 25 to a thousand. Correct? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2780 2782 1 Q. But you then concluded that it would actually 1 A. Yes. That -- that cost is positive. So it 2 2 cost more to get to your 1,000 cfs level. Right? implies that you would have to go down below 1992 3 There is an incremental cost to go from 1992 3 levels. Q. Correct. And if you take the cfs savings from 4 levels to your 1,000 cfs level. Correct? 4 5 5 A. Which is less than the cost, yes. But I want to the thousand and then add another thousand on top 6 6 to 2,000, we're a lot lower than what Georgia was make sure we're understanding each other. What I 7 7 wrote about in my first report was the cost of using in 1992. Correct? 8 reading -- or reaching a given streamflow target 8 A. Sure. That's how the math would work. 9 9 MR. PRIMIS: Your Honor, I just need one starting at 1992 levels or 2011 levels. 10 10 Q. Okay. Fine. So if we have the thousand cfs moment. I am going to do a little math in a 11 11 level, it would cost this much to get to 1992; minute. 12 12 and then it costs more to get up to 2011. Right? I want to be mindful of the clock. And 13 13 A. Yes, but working the other way around. You start we can break whenever; but I -- I can 14 with the status quo level of consumption and then 14 probably do this in 15 to 20 minutes. Not 15 work down to a given streamflow level. 15 finish, but get through this part. 16 Q. Yes. 16 SPECIAL MASTER LANCASTER: Proceed. 17 MR. PRIMIS: I'm sorry, your Honor. 17 MR. PRIMIS: Thank you. 18 We're getting a little bogged down. 18 And my colleague Mr. Sturek -- Ken 19 BY MR. PRIMIS: 19 Sturek -- is going to help me set up that 20 Q. But the basic point I'm trying to establish, 20 easel. 21 Dr. Sunding, is that when you went from -- you 21 BY MR. PRIMIS: 22 22 compared 1,000 cfs versus 2011 and 1,000 cfs Q. So, Dr. Sunding, on your estimated costs tied to 23 23 versus 1992. Right? the streamflow benefits, I want to look now at A. Yes. 24 your first report, which is the first page of Q. And you make the point if Georgia had just stayed 25 25 that three-page handout. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

1	Q.	And you said that would cost Georgia 22 million	1		per connection service cost per service
2		for a 20 percent reduction and 40 million for a	2		connection cost. Correct?
3		30 percent reduction. Right?	3		In paragraph 76.
4	Α.	It would cost Georgia water consumers that much	4	_	Let me take a look.
5	_	in consumer surplus loss.	5	Q.	About four lines up from the bottom.
6	Q.	And these are the types of scenarios where you	6		And I stand corrected. You are referencing a
7		would have to multiply it by three to get the	7		welfare loss there, so that is what you are
8		single year cost, right, because these are	8		talking about. But you estimate \$78 per service
9	_	drought year measures?	9	_	connection. Correct?
10	A.	Yes.	10		And, I'm sorry. What page?
11	Q.	And so if we do the same type of math we did in a	11	Q.	I'm sorry. It's paragraph 76, page 37 of your
12		drought year, you would estimate that the cost	12		trial testimony.
13		would be \$66 million for a 20 percent reduction	13	A.	All right. We keep switching back and forth
14		in municipal outdoor water use, and 120 million	14		between reports.
15		to get it up to 30 percent reduction. Correct?	15	Q.	If there's a way I could have had you write fewer
16	A.	Yes.	16		reports, Dr. Sunding, I would have taken that
17	Q.	Now	17		deal.
18	A.	I think it's actually 150 million, isn't it or	18		Okay. Are you there yet?
19		no?	19	A.	Yes.
20		No. 40 times 3. I got it.	20	Q.	Is
21	Q.	Now, if we go back to your direct testimony,	21	A.	You're right; this is the welfare cost we have
22		which is page 3, you now estimate that a 50	22		been talking about.
23		percent reduction in outdoor water use. Correct?	23	Q.	So you estimate a welfare loss of about \$78 per
24	A.	Yes.	24		service connection. Right?
25		And you say that can generate 207 cfs. Correct?	25	A.	Yes.

2793 1 Q. And you know that given the number of service 1 will be offset because the people of Atlanta will 2 2 connections, that that would cost hundreds of feel good about it. Right? 3 millions of dollars a year in welfare loss in 3 Α. I'm not sure I would put it exactly like that; metro Atlanta. Correct? but, yes, I think there are welfare gains that 5 A. I haven't done the math; but it would be -- it would be experienced by Atlanta residents from 6 would come to over a hundred million, definitely. having more water in the stream. 7 Q. Somewhere between 100 and 200 million? 7 Q. The way you would say it as an economist is that 8 A. I think so, yes. 8 the preferences of urban consumers to minimize 9 Q. Now, in paragraph 79 of your expert report you 9 downstream impacts to Florida would offset these 10 explain -- I'm sorry, of your direct testimony --10 hundred to \$200 million of welfare costs. 11 now, it's my fault. 11 Correct? 12 In paragraph 79 of your direct testimony you 12 Sure. Those would -- would both be examples of 13 explain why you don't include any costs for a 13 welfare costs. 14 50 percent reduction in municipal and outdoor 14 **Q.** And that concept comes from this survey you 15 water use. Correct? 15 conducted, right, where you asked people what 16 A. Yes. 16 they would be willing to pay for and what they 17 17 **Q.** And the first reason is that it's not associated might do. Correct? 18 18 with any fiscal cost. Right? A. Yes. Sure. 19 A. That's right. It's not something the legislature 19 Q. Now, the survey never actually asked respondents 20 20 would have to appropriate money for to compensate what they would do if confronted with a 50 21 21 percent reduction in outdoor water usage to help 22 22 Q. Now, on that point, Dr. Sunding, that's the same Florida out. Right? 23 cost you assigned a number to in February. 23 You never asked that specific scenario? 24 24 A. I disagree. It asked them what they would do if Right? 25 25 they were confronted with particular outdoor Yes. And I reported it again in my direct THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2792 2794 1 report -- in my direct testimony. 1 watering restrictions that we know would generate 2 2 **Q.** We haven't changed the types of costs. Right? that amount of water. 3 3 Q. Is it your testimony that you said to these You had welfare costs of 120 million in a dry 4 year in February. And you changed the name to 4 people, we're going to cut your water consumption 5 fiscal costs and reported zero. But the welfare 5 for outdoor use by 50 percent? 6 cost of 120 million still exists. Right? 6 Α. Oh, no. Definitely not. It's -- we have the 7 A. Sure. Yes. And that's why -- that's why I 7 survey instrument that was included in my report. 8 reported it. 8 And the questions talk about certain kinds of 9 Q. And as an economist, you know that a welfare cost 9 outdoor water use restrictions. And then we 10 10 asked people what was their willingness to is a real cost. Right? 11 11 A. It is a real cost. And as I point out in my support those if the water would make its way 12 testimony, it's a -- it's qualitatively different 12 down to Florida. 13 13 We have other information about how much than a fiscal cost. I think any economist 14 realizes that. 14 water that would save, and that's where I built 15 Q. You thought it was real enough to make 15 the crosswalk. Q. Okay. Now, Dr. Sunding, you didn't quantify the 16 significant estimates for it in February. True? 16 17 A. And I reported those estimates again in my direct 17 value, if any, to Georgia residents of minimizing 18 18 testimony. Yes. the downstream impacts to Florida. Correct? 19 Q. But in the handy chart that we look at to see 19 You mean monetary value? 20 what the cost to Georgia is, you changed the 20 Correct. 21 label; and you report zero. True? 21 Α. Right. 22 22 A. Because I was focusing on it -- yes. Because I You say that the -- Georgia would -- it would be 23 23 was focusing on a different aspect of cost. offset -- the cost would be offset by this 24 24 positive feeling, but you never actually -- you Q. Now, Dr. Sunding, you also say that these 25 hundreds to \$200 million in welfare costs, they 25 didn't do any quantitative analysis to determine THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

1 that. Correct? A. Well, again, I'm -- it's the State of Florida 2 2 A. No. It's in my experience easier for survey that's suggesting. What I analyzed is the cost 3 respondents to answer questions about specific 3 of conservation -- conservation scenarios. But 4 behaviors or things that are easy to comprehend. 4 I -- as I understand it, what Florida is asking 5 MR. PRIMIS: Your Honor, this might be a 5 for is a cap on consumption that would translate 6 good time for a break, if it's not too early. 6 into a certain amount of reduction in depletions, 7 SPECIAL MASTER LANCASTER: Fine. 7 whether it's 1,000, 2,000, or something in 8 MR. PRIMIS: Thank you. 8 9 (Time Noted: 11:46 a.m.) 9 Q. And just to make the record clear on my question, 10 (Recess Called) 10 it's not your role to say to the Court the 11 (Time Noted: 12:46 p.m.) 11 streamflow impact number should be X or Y; you're 12 MR. PRIMIS: I'm sorry, your Honor. I 12 just evaluating a series of options and 13 didn't see that you had slipped in. 13 calculating it out. Correct? 14 SPECIAL MASTER LANCASTER: I sneaked in. 14 A. That's right. That's fair. 15 MR. PRIMIS: Well, you're always welcome. 15 **Q.** Dr. Sunding, I want to focus your attention on 16 16 We have two housekeeping matters to put what we call indirect costs. 17 on the record. The first is that I simply 17 A. All right. Sure. 18 18 Q. Can you turn to paragraph 91 of your direct marked for identification this chart as 19 Sunding demonstrative 1 in case we need to 19 testimony. 20 20 track it down later. This is your trial testimony I'm talking 21 21 And, second, Mr. Dunlap advised us about about. A. Oh. Paragraph 91? 22 22 the Court's approach to written direct 23 testimony and what will actually be admitted. 23 **Q.** Yes, sir. A. Sure. 24 And our understanding, both parties, is that 24 25 unless there is an opportunity to 25 **Q.** And in particular, the third line down starting THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2796 2798 1 cross-examine or an agreement, that direct 1 with echoing claims. A. Yes? 2 written testimony will not be admitted into 2 3 3 **Q.** And do you see here that you're stating that it the record. 4 4 We do have an agreement on one pair of would be improper in this case to consider 5 5 witnesses. They kind of testify against one employment impacts from reductions in 6 6 another. It's Dr. Scyphers, S C Y P H E R S. agricultural output that result from water 7 7 conservation efforts. Correct? He's a survey expert. And Dr. Cantor is 8 8 A. No. I'm not saying that. I quantified indirect Georgia's response to Dr. Scyphers. And the 9 9 impacts myself in this case. parties have agreed that that testimony can 10 come in without the need for cross-examination. 10 **Q.** You have; right. But you're not offering that as 11 SPECIAL MASTER LANCASTER: Mr. Perry? 11 part of your testimony here. Correct? 12 12 No. Those numbers weren't included in my direct MR. PERRY: That's right, your Honor. Α. 13 SPECIAL MASTER LANCASTER: Thank you. 13 testimony. They were in my expert report. 14 MR. PRIMIS: Okay. May I proceed? 14 Q. Okay. Just -- again, since there's a lot of 15 SPECIAL MASTER LANCASTER: Please. 15 paper around, I just want to be clear. In your 16 MR. PRIMIS: Thank you. 16 expert report you calculated the indirect costs 17 BY MR. PRIMIS: 17 in terms of things like job losses and the like; 18 Q. Dr. Sunding, before the break we were talking 18 but you don't include that as part of your 19 about various scenarios that gross up to either 19 written direct testimony for the trial. Correct? 20 1,000 or 2,000 cfs of streamflow. Do you 20 A. That's correct. And to be clear, I did that for 21 21 remember that? the agricultural sector. 22 Q. Correct. Thank you for that clarification. 22 A. Sure. I remember it. 23 Q. You're not suggesting that the Court pick any 23 So let's go to your first report where you 24 particular number, whether it's 1,000 or 2,000 or 24 calculated those impacts. It's paragraph 81. 25 something in between. Correct? 25 And it's FX-784, which I think is the first tab THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 2799 2801 1 in the binder. 1 one-time impact would be in that drought year. A. All right. I'm there. 2 2 3 MR. PRIMIS: It's page 54, just so 3 A. Yes. everyone can follow along, of FX-784, that Q. If we do that here, we end up with 24 million in 4 5 first tab. indirect economic impact and 45 in induced 6 BY MR. PRIMIS: 6 economic impact in that dry year. Correct? 7 Q. Okay. Now, this section, Dr. Sunding, is called 7 Α. 8 Indirect and Induced Impacts. Correct? 8 Q. If you sum those up, you get \$69 million in a dry 9 A. It is. 9 year of indirect economic impact under your 10 Q. And in paragraph 81, you observed that in 10 analysis. Correct? 11 addition to the direct economic cost of not 11 A. Yes. Q. You also tallied up some job losses that would go 12 growing various crops, that the irrigation 12 13 cut-backs will also impact industries that 13 along with the agricultural reduction. Correct? 14 support agricultural activity. Correct? 14 A. Yes. 15 A. Yes. 15 Q. You estimate that with a 50 percent reduction in 16 Q. Then if we go to page 55 of your report, you 16 agricultural irrigation, there would be a loss of 17 17 actually provide some calculations that estimate 488 full-time jobs in the farming sector. those impacts. Right? 18 Correct? 18 A. So -- right. Those are job losses on farm. 19 A. Yes. In table 9, for example, those are 19 20 20 Q. Right. Okay. And those would be 488 full-time displayed. 21 **Q.** Right. That's what I was talking about. 21 jobs. And that's depicted in table 9. Right? 22 22 A. Yes. And for purposes of this exercise, you 23 estimated the indirect economic and employment 23 **Q.** You also identify 64 jobs in indirectly-affected 24 impacts of a 50 percent reduction in agricultural 24 sectors and 93 jobs in induced economic impacts. 25 water use. Correct? 25 Right? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2802 2800 A. Let me just refresh my memory about how I did 1 A. Yes. 2 this. 2 **Q.** If we tally those up, we get approximately 650 3 **Q.** Paragraph 83 might refresh your recollection. 3 jobs? 4 A. Right. That's what I'm reading. A. That sounds right. 4 5 All right. Yes, I think you characterized 5 Q. Now, again, these are annualized numbers? 6 6 A. I knew you were going to ask me that. That I that correctly. 7 Q. So what you're doing here is you're looking at 7 can't remember if these are annualized or when 8 8 the indirect effects in terms of other industries the impacts actually occur. 9 that could be impacted or other jobs that might 9 Q. Well, if they are annualized, you would, again, 10 10 be lost that aren't directly related to pulling multiply by 3. And we calculated about fifteen 11 11 corn or cotton out of the ground. Right? to 1600 jobs -- actually, no; I'm wrong. We 12 A. That's right. 12 calculate 1935 jobs lost in the dry year with the 13 Q. And table 9 reflects the numbers that you 13 three-time multiplier? 14 generated by doing that analysis. Right? 14 A. That's right. If that's how I calculated these 15 A. Yes. 15 impacts, that would be correct. 16 Q. You say also in paragraph 83 right after that, 16 **Q.** So if we lose 1935 jobs in that dry year from the 17 you estimate an additional \$8 million in indirect 17 50 percent cut in Georgia, I just want to compare 18 economic impact and \$15 million in induced 18 that to a number in Florida. Are you aware that 19 19 impact. Correct? Florida's official records show that there are 20 only about 1700 licensed oyster harvesters in 20 A. I see that, yes, in paragraph 83. 21 **Q.** And like we did earlier with the single-year 21 Apalachicola Bay? 22 costs, these are annualized over a three-year 22 A. No. But that -- that sounds about right based on 23 period. Correct? 23 what I know about the industry. A. That's right. 24 **Q.** And so the job loss you projected from a 50 **Q.** So you actually tripled them to find out what the 25 percent reduction in Georgia would actually THE REPORTING GROUP THE REPORTING GROUP

Mason & Lockhart

2803 2805 1 exceed the number of all oyster fishermen 1 now -- I hope it's the last time; but I am going 2 2 licensed in Apalachicola Bay. Correct? to move across reports. 3 A. Well, not -- not exactly. The table that we're 3 Α. Okav. 4 referring to, you will note, is labeled impacts. 4 Q. So what I want to draw your attention to --5 So these are people who might lose a job in 5 actually, of course, our handout doesn't have 6 agriculture or some other sector. But they could 6 this; but the -- we can just cut to the chase. 7 find another job. So it's not to say that they 7 In your initial expert report you calculated what 8 would be unemployed for the duration of the water 8 you called dry year peak streamflow depletions. 9 cut-back. They would just have some dislocation. 9 Correct? 10 **Q.** So we would have almost 2,000 dislocated people 10 A. Yes. 11 in Georgia? 11 **Q.** And you focused on what you modeled to be a dry 12 A. Yes. The -- the agricultural labor force is one 12 year, which was a combination of 2011 and 2012 13 of the mostly highly elastic parts of the labor 13 hydrology conditions. Correct? 14 sector. So these people -- you know, I know this 14 A. That's right. 15 from California, Texas, other places. They can 15 Q. Now, in your second expert report you changed 16 16 move around from sector to sector quite easily. that. Right? 17 Q. I might have missed it. Do you have an 17 Yes. I evaluated the conservation measures under 18 18 elasticity analysis here in your expert report a different assumption about hydrology. 19 about Georgia farmers? 19 Q. Right. You took 2012 out of the picture, and you 20 20 A. No. These are farm workers, not farmers. focused just on the year 2011. Right? 21 Q. Dr. Sunding, do you have an elasticity analysis 21 A. Yes. 22 22 in your expert report or written direct testimony Q. And you used 2011 hydrology in this second 23 about these dislocated Georgia farm workers who 23 report. Right? A. Yes. 24 would lose their job in a dry year with 24 25 irrigation reductions? 25 Q. Now, you called it in your second report a THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2804 2806 A. If you look at paragraph 84 --1 drought year scenario, not a dry year scenario. Q. Yes? 2 2 Right? 3 A. -- the first sentence reads, it should be noted, 3 A. I believe you're right. however, that IMPLAN's employment impact 4 4 **Q.** And the reason you did that is because the 5 5 drought was more severe in 2011 than in 2012. estimates are likely overstated. 6 6 Riaht? And one of the reasons is that just because 7 7 someone loses a job in one sector doesn't mean A. I mean, certainly it's the case that 2011 was 8 8 that they sit on their hands until the water drier than 2012. Yes, I think that's why I 9 comes back. They adapt. 9 changed the terminology. Q. And when you actually changed, going from a 10 Q. My question was did you calculate that and put it 10 11 11 hybrid of 2011 and 2012 and just to 2011, that in your report? 12 12 A. Not a numerical value, no. had the effect of generating more streamflow 13 13 Q. Now, Dr. Sunding, in your first expert report, savings from the same actions. Right? A. Yes. Because demands are higher in a very dry 14 which we're in right now, if you go to --14 15 actually, let's stick -- I want to look at the 15 year like 2011. That's correct. 16 table; so we can use the handout. It's the first 16 Q. Now, when I asked you why you changed that 17 page of the handout, or in your book it's your 17 benchmark to go from 2011 and 2012 hybrid to just 18 first report. 18 2011, you couldn't answer that question without 19 And you have the four scenarios for 1,000 19 revealing conversations with counsel. Correct? 20 cfs. Correct? 20 That's right. 21 A. Yes. 21 **Q.** And you declined to answer the question. Right? 22 22 Q. That's on page 9 of your first report, or it's A. That's right. 23 23 the first page of this three-page handout. Q. Now, with regard to the 2011 conditions -- well, A. I like the handout. 24 actually, no. Let me move on. Let's go down to Q. The handout is easier, because I'm going to move 25 your direct testimony, sir. The written THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

		TRIAL - November	17, 2	) 10 (1	/ol. XI) Florida v. Georgi
		2811			2813
1	Q.	Well, let's talk about that. In this case, your	1		row called Deficit Irrigation to Reach 2,000 cfs.
2		discussions with other experts, in virtually all	2		Do you see that?
3		of those discussions that you have had with other	3	A.	I do.
4		Florida experts they focused on dry years.	4	Q.	Now, when you talk about deficit irrigation,
5		Correct?	5		that's your least-cost means of conservation.
6	A.	Yeah. The discussions that I had, especially	6		Correct?
7		with the biologists and the hydrologists, were	7	A.	Again, we're going to have to be careful about
8		largely almost exclusively focused on dry years.	8		terminology. Deficit irrigation is not the
9	Q.	In fact, you have not heard any issues from those	9		least-cost alternative across all the
10		other experts raised about average or wet-year	10		conservation possibilities. But I do use a
11		problems. True?	11		least-cost concept in defining the cost of
12	A.	I can't I can't think of any. But that was	12		deficit irrigation. I just want to make sure
13		not all I had in mind when I wrote this sentence	13		we're talking about the same thing.
14		in my direct report that we're discussing now.	14	Q.	Dr. Sunding, I was just reading from the
15	Q.	Dr. Sunding, can you turn to page 280, line 23,	15		trying to save some time. I was reading from
16		of your deposition, please. And I'm going to	16		page 51 of your first expert report, paragraph
17		play a clip from 280, 23 to 281, line 9.	17		73, next to last sentence.
18	A.	What page are we on in the deposition?	18	A.	Right, yes. This is what I was just talking
19	Q.	Page 280.	19		about.
20	A.	280.	20	Q.	Right. I thought that's what I read verbatim,
21	Q.	And let's hold let's wait. 280, line 23	21		but you agree with that statement?
22	A.	All right.	22	A.	I do.
23	Q.	to 281, line 9.	23	Q.	Okay. So this deficit irrigation concept
24		MR. PRIMIS: And, Mr. Smith, can you	24		provides the least-cost combination of deficit
25		play that, clips 233 and 234.	25		irrigation that will achieve any given reduction

You also looked at the level to which their groundwater connected to the river. Correct? That's correct. So you're looking at crop type, soil type, user

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 1 type, connectivity of the aguifer, and you're Not -- not a riparian state, but my mechanism 2 2 taking that all into account and saying under a doesn't necessarily involve trading across users. 3 certain year, this type of crop is the least 3 Q. It would be a departure from a riparian regime to 4 expensive to eliminate. So let's start there. have farmers owning their water rights and 5 5 trading them amongst themselves. Correct? 6 A. Yes. It's not exactly how I would say it, but 6 A. Yes. It would be easier for farmers to transfer 7 the idea is correct. 7 within their own operations, which is part of 8 **Q.** Now, when we talked about how you could implement 8 what I have in mind. I mean, remember, farmers 9 such a thing where you have all these different 9 own multiple pivots in many cases; and they can 10 moving parts, I was confused. I said, how are 10 move water around within their own operations to 11 farmers going to know if it's my turn to reduce? 11 achieve the same kind of outcome I'm talking 12 And one way you said that the State could do 12 about. 13 this is to adopt a cap and trade system. Right? 13 **Q.** My question related to a cap and trade system 14 A. Yes. 14 where farmers trade amongst themselves. That 15 Q. This would mean that either the Court or Georgia 15 would be a departure from a regulated riparian 16 16 or someone else picks a cap, and then you assume situation. Correct? 17 that the efficient market will sort out who is 17 A. Yes. If Georgia wants to minimize costs, it will 18 18 going to water what crop. Right? likely have to make some institutional 19 A. Yes. That there would be a cap established on 19 improvements. 20 20 the total amount of water used. And then farmers Q. The legal regime for property in Georgia would 21 would move water around to maximize profits 21 have to be changed. Correct? 22 22 subject to that resource constraint. A. I can't comment on the legal regime. But there 23 **Q.** And once you have that resource constraint, 23 would -- there would likely have to be some 24 farmers would efficiently act to reduce water use 24 change in institutions. 25 depending on the crop and soil type and 25 **Q.** Let's stick with deficit irrigation, Dr. Sunding. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2816 2818 1 connectivity and all those other factors. Right? 1 And can I refer you to paragraph 49 of your 2 2 A. Absolutely. direct testimony. 3 **Q.** Now, you're familiar with the difference between Α. 3 Sure. 4 riparian states and prior appropriation states at Q. Can you read the second sentence of paragraph 49. 5 a general level. Correct, sir? Α. The second sentence of paragraph 49? 5 6 Q. Yes. A. I am, yes. 6 7 Q. You're aware that in prior appropriation states, 7 Α. My gosh. I'm on the wrong report. 8 water rights are segregated from ownership of the 8 **Q.** We're -- just to be clear, we're talking about 9 9 the Sunding direct written testimony, paragraph land? 10 10 A. In prior appropriation states, yes. 49, second sentence. 11 **Q.** And whereas in riparian states, water rights are 11 A. All right. So it begins I found? 12 tied to the property adjacent to the water. 12 Q. Yes. 13 Correct? 13 A. I found through my analysis --14 A. Yes. 14 Q. Don't read it out loud. 15 15 Α. Oh, I'm sorry. I thought you wanted me to. **Q.** You know Georgia is a regulated riparian state. 16 Riaht? 16 Yes. 17 A. Yes. 17 Q. So you're saying here that you have done an 18 **Q.** And you also know that in a riparian state, the 18 analysis, and you have determined that Georgia 19 owner of the land doesn't have a stand-alone 19 farmers apply much more water than they need to 20 right to transfer the ownership of that water. 20 irrigate their crops. Right?

22 A. Yes.

21

23 Q. And you're not aware of a single riparian state

24 that has a marketplace for trading water among

25 irrigators. Correct?

Correct?

I I think that. I think I believe Dr. Hoogenboom thinks that, and I believe that even Dr. Irmak thinks that, that on average Georgia farmers are below this maximum irrigation depth.  It's below the optimal irrigation depth. Right?  It's not optimal. It's what I'm looking at is

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 2825 1 of water beyond which there's no additional A. That -- it could be true. 2 2 beneficial plant growth. **Q.** And right now, we're talking about percentage of 3 Q. Dr. Sunding, just to make this crystal clear, 3 acreage, just to be clear. The percentage of 4 acreage that is underwatered is higher than 80 your analysis and Dr. Hoogenboom's analysis show 4 5 that Georgia farmers in the aggregate are percent. Correct? 6 underwatering compared to that maximum amount 6 A. That I don't know. 7 that you identified. Correct? 7 Do you have any basis to disagree that it's 80 8 A. Yes. That question I like better. 8 percent or even higher in other years? 9 Q. In addition to your preference to the question, 9 A. You know, I would have thought it somewhere in 10 do you agree with the assertion? 10 the 60 to 80 percent range; but I -- again, I may 11 A. I do. It's just that you used the word optimal 11 have done that calculation at some point; but I 12 before, and you modified the question in a way 12 don't have it in my mind now. 13 that I will agree with. 13 Q. Okay. We have had our experts do it, so we'll 14 Q. Dr. Sunding, can you turn to page 25 of your 14 bring it up later in the trial. 15 written direct testimony. 15 Dr. Sunding, I want to talk now about your 16 16 assertion that agricultural irrigation is, quote, We have a figure 4 there. You actually have 17 17 a figure 3 and a figure 4. Correct? clearly discretionary. Do you recall giving that A. I'm sorry. We're on which page now? 18 testimony? 18 19 **Q.** Page 25. 19 A. I do. 20 A. Yes. 20 Q. You don't believe that farmers in ACF Georgia 21 **Q.** If we look at the bottom one, figure 4, the way 21 should exercise their discretion to stop 22 22 your analysis worked was that red vertical line irrigating altogether. Right? 23 shows what you considered to be the maximum 23 I'm not sure I understand the question. 24 productive depth for the type of crop and soil 24 **Q.** Well, you're not of the view that all the farmers 25 and growth year depicted. Right? 25 should exercise their discretion and should go THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2824 2826 A. Yes. Again, that's the number that I got from 1 entirely to dry-land farming in southwest 2 2 Dr. Hoogenboom. Georgia; are you? 3 **Q.** So here, if you're growing peanuts on fine soil 3 No. I don't think I have said that. 4 in 2011, this would show that the vast majority Q. You would agree that without irrigation, farming 4 5 of farmers are to the left of the maximum 5 is totally dependent on precipitation. Correct? 6 productive depth and, therefore, underwatering. 6 A. It is dependent on precipitation, but there are a 7 Right? 7 lot of other inputs that go into agriculture 8 8 A. Yes, it does. besides just water. 9  $\boldsymbol{Q}_{\!\boldsymbol{\cdot}}$  And there's a few instances to the right of 9 Q. Well, we're here talking about water. So as it 10 10 people you say would be overwatering? relates to water, you would agree that natural 11 11 A. That's correct. precipitation exclusively if you're not going to 12 **Q.** And then on the other one, you have more people 12 do irrigation. Right? 13 13 A. Yes. I just think your question before was in that particular instance who you considered to 14 be overwatering; is that right? 14 overstated. 15 A. Yes. It's just another example. 15 Q. Precipitation varies from year to year. Right? 16 **Q.** Now, have you calculated the percentage of 16 Of course, it does. 17 farmers using your analysis that are 17 **Q.** Varies from season to season? 18 underwatering in Georgia? 18 A. Yes, it does. 19 A. I don't -- we might have calculated that sometime 19 **Q.** And it can also vary regionally even within the 20 along the way; but I don't have it in my head now 20 ACF Basin within the same season. Correct? 21 if I did. 21 A. It can, yes. 22 **Q.** Are you familiar enough with your own analysis to 22 Q. You would agree that irrigation helps farms 23 agree that it's more than 80 percent of Georgia 23 improve their yields. Correct?

> THE REPORTING GROUP Mason & Lockhart

farmers who would be underwatering under your

25

analysis?

24

In certain years. Not in every year.

THE REPORTING GROUP

Q. You would also agree that irrigation helps

2829 2827 1 stabilize production. Right? 1 interested in the stability of yield from a 2 2 A. Yes. I would agree with that. farmer's crops. Right? 3 **Q.** And without irrigation, you can have a bouncing 3 A. Yes. Again, among other things, sure. They want around of yield according to how precipitation to get repaid if they're loaning money. 4 5 varies from one year to another. Correct? 5 **Q.** And you would agree that it is possible that the 6 A. Yes. Yield can go up and down to a greater 6 presence of irrigation influences a farmer's 7 degree with no irrigation. 7 ability to secure a loan to finance his farm. 8 **Q.** And irrigation also raises average yields across 8 True? 9 all years it's used. Correct? 9 A. I think it's possible. 10 A. Yes. 10 Q. I want to make a big transition now, and we're 11 **Q.** It eliminates downside risk in years where yields 11 going to talk about pecans. 12 would otherwise be low. Correct? 12 A. All right. 13 A. Well, now you're talking about a financial risk. 13 **Q.** All right. You have an opinion about pecans. 14 And to answer that, you would have to know 14 Right? 15 something about whether or not growers have 15 Α. Yes. 16 Q. Let's go to paragraph 54 of your direct 16 access to crop insurance. 17 Q. Dr. Sunding, can you turn to page 254 of your 17 testimony. Can you read that and just let us 18 deposition, please, lines 16 through 24. Are you 18 know if that's where you offer your pecan 19 there, sir? 19 opinion? 20 20 A. You're on page 254, line 16 through 24? A. Paragraph 54 or page 54? 21 Q. Correct. 21 Q. Paragraph, on page 27. 22 A. All right. 22 By the time you figure this routine out, 23 **Q.** The question was, of what benefit is stabilized 23 we're going to be done, Dr. Sunding. 24 production for farmers? 24 A. Right. 25 The answer was, well, it's two benefits. If 25 Okay. I see it. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2828 2830 1 irrigation is used predominantly in the drier 1 Q. Okay. And here you say that if farmers reduce 2 2 years, it has two effects. It raises average pecan irrigation by 38 percent at certain times 3 3 yields across all years, and it eliminates or of year, you can generate streamflow benefits 4 reduces some downside risk. So in years that the exceeding 100 cfs in a dry year. Correct? 5 A. Yes. yields would otherwise be low, it reduces risk. 5 6 Were you asked that question, and did you 6 **Q.** You base this conclusion entirely on a paper 7 7 written by Lenny Wells from the University of give that answer? 8 A. Yes. And there we're talking about production 8 Georgia. Correct? 9 risk as opposed to financial risk. They're 9 A. It's not entirely on the paper. As we discussed different. 10 10 in my deposition, it's more than that. 11 Q. Dr. Sunding, farmers who practice dry-land 11 Q. Dr. Wells gave a PowerPoint presentation to 12 farming face an increased risk of a lower yield 12 farmers, too, that you looked at. Right? 13 13 during a dry year. Correct? A. Yeah. More than one presentation, but I have a 14 A. I think that's right. Yes. 14 copy of the PowerPoint that he uses. 15 **Q.** Farmers who practice dry-land farming face an 15 **Q.** And the PowerPoint is based on his single study. 16 increased risk of crop failure in dry years 16 Correct? 17 compared to farmers who irrigate. Correct? 17 A. I don't know about that. I presume he has other 18 A. That may also be true, yes. 18 experiences beyond those that were reflected in 19 **Q.** And you would agree that agricultural lenders pay 19 the paper. 20 attention to the yields that come off of a farm 20 Q. That's what you presume? 21 when making a decision whether to loan money out, 21 Α. 22 Q. Now, the paper came out in April of 2015. 22 among other factors. Right? 23 Correct? 23 A. Among other factors, sure. That fits with my 24 24 I believe that's right. experience. 25 Q. That's because agricultural lenders are 25 Q. The Wells paper, it's five pages long? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

- 1 A. The paper in Horticultural Science, yes. **Q.** Yes. And it describes a single study conducted 2 3 from 2012 to 2014. Right? A. Yes. The paper does. Q. And this pecan paper for Dr. Wells was conducted 6 on a single pecan farm in Berrien County. Right? 7 A. I believe that's right. **Q.** Berrien County is not in the ACF Basin. Right?
  - A. It is not.
- 10 Q. You have never met Dr. Wells. Correct?
- A. No. 11
- Q. You had never heard of Dr. Wells before you read 12 13 his 2015 article. Right?
- 14 A. No.
- 15 Q. And you never discussed this paper with Dr. Wells 16 after you read the article. Right?
- 17 A. No.
- 18 **Q.** You did not do anything to confirm the analysis 19 in Dr. Wells's article. Right?
- 20 A. No. He's outside my field.
- 21 **Q.** In fact, you couldn't check it because you didn't 22 have the underlying data that he used in the 23 study. Right?
- 24 A. That's right.
- 25 Q. And I think it's your view if it's good enough THE REPORTING GROUP Mason & Lockhart

1 October.

- 2 A. Right.
- **Q.** It's in your right hand.
- A. Yes. I'm turning to paragraph 13.
- Q. Yes.
- A. Got it.
- 7 Q. Paragraph 13 addresses the issue of return flows.
  - Correct?
- 9 A. Yes.

8

- 10 **Q.** And you say that water withdrawn by an M & I user
- 11 but then returned to the ACF has little impact on
- 12 streamflows. Right?
- 13 A. That's right. This is the distinction we were
- 14 talking about earlier between water use and
- 15 consumptive use.
- 16 **Q.** Right. And it's very important to distinguish
- 17 between the withdrawal of water and the actual
- 18 consumptive use of water. Right?
- 19 A. I think so, yes. Certainly in this case.
- 20 Q. And the consumptive use is the net result of the 21 withdrawal minus the return. Correct?
- A. Yes. 22
- 23 **Q.** Now, you assume that municipal use in Georgia is
- 24 largely nonconsumptive. Right?
- 25 A. Sure. Yes.

THE REPORTING GROUP Mason & Lockhart

seen and that you use in your analysis. Right?

2832

- for Dr. Wells, it's good enough for you. Right,
- Dr. Sunding? 2

1

- 3 A. He's the lead pecan researcher at the University
- 4 of Georgia, as far as I know. If he feels
- 5 confident enough to be out on the road telling
- 6 Georgia farmers to curtail early season
- 7 irrigation, that's something I put some stock in.
- 8 **Q.** And if he writes one paper about Berrien County
- 9 pecan farms on a single experiment, that's good 10 enough for you to tell the Supreme Court Georgia
- 11 can generate 100 cfs with that measure. Correct? 12 A. It's more than just the paper. He has a whole
- 13 career, as far as I can tell from looking at his
- 14 vitae, working on essentially nothing but pecans
- 15 and other nut crops. So he has a lot of
- 16 experience in this area.
- 17 Q. Okay. Dr. Sunding, I want to skip back over to
- M & I. 18
- 19 A. All right.
- Q. Municipal and industrial. All right? 20
- 21 I'm sorry. Your reports cover a lot of
- 22 ground. We need to cover a lot of issues.
- A. They do. That's all right. 23
- 24 Q. Now, in paragraph 13 of your written direct --

Mason & Lockhart

25 that's the loose one that was just filed in

THE REPORTING GROUP

- **Q.** That's consistent with the data that you have 2
- A. Yes, that's right. 3
- 4 Q. Let's go to your first expert report. It's the
- 5 first tab, page 23.
- 6 A. All right.
- 7 **Q.** And I want to focus in particular on table 3.
- 8 A. Right.
- 9 **Q.** So in your first report you included this table
- 10 that shows per capita water use in the Atlanta
- 11 service area in gallons per day. Right?
- 12 A. I see that, yes.
- 13 Q. And per capita water use is the amount of water
- 14 used per person in the Atlanta metro area.
- 15 Right?
- A. Yes. 16
- 17 Q. You would --
- 18 A. There are different measures of per capita use.
- But this is just withdrawals divided by people. 19
- 20 Q. Now, if we focus on the top line, this is the
- 21 total withdrawals. Right?
- 22 A. Yes.
- 23 Q. And so this is that distinction you drew. This
- 24 is the amount that actually gets taken out, but
- 25 it's the gross number. It doesn't talk about

THE REPORTING GROUP

Mason & Lockhart

2834

2835 2837 1 returns. Right? 1 Let's go to -- sticking in your first report, 2 2 A. Right. to page 72, please, sir. 3 **Q.** And you would agree that from 2000 to 2009 total 3 A. All right. withdrawals have declined from 123 million 4 Q. And you have a table there, table 11. Correct? 5 gallons per day to 92 million gallons per day for 5 I see it, yes. 6 this service area. Correct? 6 Q. This is where you estimated Georgia's total 7 A. Comparing just those two numbers, yes. 7 outdoor water use in the ACF Basin for the year 8 Q. You would also agree that the per capital -- per 8 2011. Correct? 9 capita water use in metro Atlanta has steadily 9 A. I just want to read the text that's describing 10 declined over the last 16 years; wouldn't you, 10 table 11. 11 11 Okay. Yes. 12 A. It is declining. The word steadily may be a 12 Q. Okay. And, sir, would you agree -- and this is 13 little bit of an overstatement. But it has 13 municipal and industrial outdoor water use. 14 declined over this period. 14 Right? 15 Q. Dr. Sunding, can you pull out your deposition, 15 Α. Well, it's -- we need to be a little careful page 358, line 23. Are you there? 16 16 about this. There are municipal withdrawal 17 A. Yes. 17 permits, and then there are industrial withdrawal 18 18 **Q.** The question was, Dr. Sunding, you will agree permits. Some large manufacturers, like the pulp 19 that the per capita water use in the metro 19 and paper facilities and whatnot, they will have 20 their own withdrawal permits. Those were not Atlanta area has steadily declined over the last 20 21 21 part of the analysis. But there were also some 16 years. Correct? 22 22 Answer. Yes. businesses that buy water from urban water 23 23 utilities. Were you asked that question, and did you 24 24 So I just want to be clear about what we're give that answer? 25 A. Yes. And then if you go down a little bit 25 talking about when we use the term municipal and THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2836 2838 1 further, there is some more detail on this point. 1 industrial, especially in this context where 2 2 **Q.** Dr. Sunding, table 3 in your first expert report there are both kinds of permits. 3 only goes through 2009. Correct? 3 **Q.** Okay. Well, just how would you define -- there is a number there, 114,550 acre-feet. 4 A. Yes. 5 Q. And you were unaware at your deposition that per 5 A. Yes. 6 capita usage in Atlanta continued to decline 6 **Q.** How would you define what is included in that? 7 after 2009. Correct? 7 A. That's -- I would call it municipal and 8 A. In my deposition I think that's the case. 8 industrial, but just understand there's a whole 9 Q. You're aware that Georgia's expert, Dr. Mayer, 9 other category of industrial users that are 10 analyzed per capita water use in the metro 10 outside this analysis. 11 district of Atlanta? 11 Q. Okay. That's fine. 12 12 A. I saw that, yes. Now, you made a similar estimate for the same 13 13 Q. And you know that he found that per capita water type of thing in your second report. Correct? 14 use continued to decline through 2013. Correct? 14 A. Yes. 15 A. Yes. 15 Q. And it was a different number. Correct? 16 Q. And you're aware that Mr. Mayer has calculated 16 Let's go to your second report, FX-801 at 17 that per capita water use has gone beneath 100 17 page 4. 18 gallons per capita per day. Correct? 18 A. Yes. 19 A. Yes. 19 Q. So you have a table there called table 2, outdoor 20 Q. Now, sticking with M & I, I want to talk about 20 use in the ACF Basin. 21 your estimates of the amount of outdoor water 21 A. Yes. 22 22 that is used in Georgia for M & I purposes. Q. Now, the number you estimate is 162,792 23 Okay? 23 acre-feet. Correct? A. All right. For 2011, yes. 24 24 Q. Just give me one moment. 25 Q. So the number in the first report was 114,000, THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

		TRIAL - Novembe	· ···, <u>-</u>	010 (	101144	v. Georgia
		2839			28	41

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 2843 2845 1 location. But the .43 and .6 are average A. Yes. I'm there. 2 estimates across the landscape. 2 **Q.** Just give me a moment, Dr. Sunding. 3 **Q.** Right. And you actually just made a very 3 Α. Right. 4 important point that I want to pause on. A pump 4 Q. I misdirected you. 5 in one location in the ACF Basin may have a very Now, I'm wrong. I get confused between the 6 different impact on streamflow from a groundwater 6 pages and the paragraphs sometimes. 7 pump in a different part of the basin. Right? 7 But let's go to paragraph 48 on page 23. 8 A. I believe that's correct. Yes. 8 A. Yes? 9 Q. And so what you have done is you say on average, 9 Q. Okay. You say at the bottom -- in particular I'm 10 it's either .43 on the low end or .6 impact on 10 focused on the bottom of page 23 where you say 11 the high end. Right? 11 that you have a .43 average connectivity, about 12 A. Those are the two -- the two sets of assumptions 12 four lines up from the bottom? 13 I was given by the hydrogeologist, yes. 13 A. I see that. Sure. 14 Q. The .6, the 60 percent impact figure that you 14 **Q.** And you say that that's highly conservative. 15 used for connectivity, you didn't use that in 15 Right? 16 16 either of your expert reports. Correct? A. Yes. That's the information I was given. 17 A. That's right. Although I did have language 17 **Q.** That's what the hydrologists told you, highly 18 18 around the .43 connectivity suggesting that that conservative at .43? 19 might be on the low side. 19 A. They have told me that for as long as they worked 20 20 Q. Right. You -- when you did your initial work and on the project, yes. 21 21 came up with your thousand cfs estimates, you **Q.** Okay. And so you then say you adjusted the 22 22 used a .43 connectivity factor. Right? connectivity values averaging .6 across the 23 A. For the numerical analysis, yes. 23 Georgia ACF. Right? Q. And you got that from Dr. Langseth? 24 A. Yes. 24 25 A. I did. 25 Q. And you got that from Drs. Langseth and THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2844 2846 Q. And when you did your second report and had 2,000 1 Hornbergerer to be a more middle-of-the-road 2 2 cfs, you used a .43 connectivity factor. Right? estimate. Right? 3 A. I did. 3 A. That was the way they described it, yes. Q. The first time you offered any numbers for Q. You weren't here when Dr. Hornberger testified; 4 4 5 5 streamflow based on a .6 connectivity factor was were you? 6 in your direct testimony that we're looking at 6 A. I was not, no. 7 7 **Q.** Are you aware that Dr. Hornberger was asked about now which we received on October 14, 2016. 8 Correct? 8 Dr. Langseth's selection of connectivity values? 9 A. That's the first time I modeled that numerically, 9 A. No. 10 10 Q. Are you aware that in his expert report, ves. 11 11 Dr. Langseth specifically reviewed and rejected **Q.** Back to your table where you have those two 12 12 the 1996 Torak and McDowell model that columns, you agree that you get more streamflow 13 13 benefit in your analysis when you use a .6 Dr. Hornberger now uses to get the .6 14 connectivity factor. Right? 14 connectivity value? 15 A. Sure, which I think reflects -- to me that makes 15 A. No. I -- I don't know that level of detail. 16 sense. That result seems intuitive. 16 **Q.** You don't know that Dr. Langseth rejected that 17 **Q.** And in the aggregate, it increases your total 17 model? 18 number from 1800 to 2,000 under the drought year 18 Α. No. 19 scenarios. Correct? 19 **Q.** Are you aware that Dr. Hornberger admitted that A. Yes. It makes a modest difference in 20 20 Dr. Langseth had reviewed and rejected the Torak 21 21 streamflows. and McDowell model just last week? 22 22 **Q.** You say in that paragraph -- you say in paragraph MR. PERRY: Objection, mischaracterization. 23 23 BY MR. PRIMIS: 42 -- I'm sorry. You say in paragraph 90 of your 24 direct that the new connectivity value, the .6 --Q. We can put the trial transcript up if you prefer, 24

I'll just let you get there. It's paragraph 90.

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 2851 2853 1 types of measures we're discussing in this case 1 was there a different purpose? 2 being applied in other circumstances. 2 A. That particular project was both aquatic species 3 A. Sure. I started with the Klamath before, so I'll 3 and then birds. There's a -- in the area outside 4 start with the Klamath now. In the Klamath of Fallon, Nevada, there is a very large national Basin, there were issues related to in-stream 5 wildlife refuge that they need water to support 6 flows -- you know, flows in the river -- and 6 birds overwintering there in their migratory 7 salmon in particular. And farmers had to cut 7 paths. 8 8 SPECIAL MASTER LANCASTER: Excuse me, back their water usage in particular dry years. 9 And the way the government did that was they 9 doctor. Could you speak into the microphone. 10 instituted an auction. So they actually paid 10 THE WITNESS: Sure. Sorry. 11 farmers to reduce their irrigation during certain 11 SPECIAL MASTER LANCASTER: You don't 12 dry periods to keep the water in the river for 12 have to look at me, but she has to get every 13 13 word you say. 14 Q. Would that auction have been somewhat similar to 14 THE WITNESS: All right. 15 the tools used in the Flint River Drought 15 BY MR. PERRY: 16 16 Protection Act when it was actually being Q. Now, sir, Mr. Primis mentioned maybe once or 17 employed? 17 twice the word riparian. Are you familiar with 18 18 A. At a high level of generality, yes. There were a the Imperial Valley and what, if anything, was 19 number of institutional details in the Klamath 19 done there? 20 20 A. I am. program that made it more successful, if I could, 21 21 than the program in the Flint; but it's **Q.** Could you describe that for the Court, please. 22 22 conceptually similar. Sure. The Imperial Valley -- let's start with 23 Q. Now, you have been involved in situations where 23 the Imperial Irrigation District is a very large 24 24 farmers have been, on a permanent basis, asked to federal reclamation project in the Mojave Desert 25 25 of California and gets water supply from the stop irrigating; isn't that right? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2852 2854 A. Yes. That's also quite common. 1 Colorado River. The case of Imperial I think is 2 **Q.** Can you describe some of those circumstances 2 notable here because the farmers in the Imperial 3 3 elsewhere in the country. Valley had very senior water rights. They 4 A. Sure. 4 settled that part of California at a very early 5 5 Well, in -- in California right now, we're in stage. And historically, farmers in the Imperial 6 the process of a very large-scale unwinding of 6 Irrigation District had no quantified upper limit 7 7 several hundred thousand acres of irrigated on the amount of water they could use, much like 8 agriculture due to environmental flow 8 Georgia groundwater users in the agricultural 9 9 considerations. sector. And as part of what's known as the 10 10 Another example that I -- sort of more **Quantification Settlement Agreement on the** 11 11 bite-sized that I had quite a bit of personal Colorado River, which I helped negotiate, the 12 12 involvement in is the -- a situation in Nevada in farmers in Imperial accepted a cap on their 13 13 the Newlands Irrigation District, which is irrigation per acre, much like we're suggesting 14 actually the first project undertaken by the 14 should happen here. And then they're free to 15 15 Bureau of Reclamation in its history. That was move that water around in whatever way maximizes another case where, for environmental reasons, 16 16 their productivity. 17 17 Q. there were just too many acres under production. And when you say move water around, is that 18 And so the government, working with the Nature 18 between their various fields and among their crop 19 Conservancy and the water district itself, 19 rotations; is that fair? 20 started a program where agricultural irrigation 20 A. 21 rights were retired on a permanent basis both to 21 Now, you also mentioned, I think a moment ago, 22 22 expand the size of a wildlife refuge, but more the Republican River in Nebraska. Could you just 23 23 importantly to get more water back in-stream. give us just a bit of detail about that, please.

**Q.** When you say water back in-stream, was it the

Mason & Lockhart

purpose of that project to aid aquatic species or THE REPORTING GROUP

24

25

24

25

Sure. Actually, the only other time I have been

to Portland, Maine, was to testify in the

Mason & Lockhart

THE REPORTING GROUP

2855

Republican River case. I testified on behalf of 2 the State of Nebraska.

The Republican River has similar environmental flow issues. And something that's notable about that case is that the Nebraska -the State of Nebraska has overall responsibility for making sure that a consumption cap is enforced. But what the State has done is set up three what are called Natural Resources Districts across the Republican River. And each of those districts represents a particular area. They each come up with a water management plan that makes sense to them, to farmers, and other users in those particular areas. And I describe this

And so what will happen when the State determines what's the allowable amount of consumption under the Compact, they flow that down to the Natural Resource Districts. They actually have to implement the consumption cap, and the State oversees it.

And if there's compliance, great; everybody goes along. If there's noncompliance, then the State has to intervene and request additional measures. But there's both, you know,

THE REPORTING GROUP

Mason & Lockhart

to save water here.

2 Α. Sure. Could I actually start with the Ag sector?

19

20

21

22

23

24

25

A. Sure. So the work that I did on the agricultural sector was extremely data intensive, and I tried to implement it very carefully. The State of

6 7 Georgia has an agricultural metering database.

8 So they have meters installed on a little more

9 than half the agriculture wells in the Flint

10 Basin. And so we took information by well on how 11 much those farmers were using by year and matched

12 that up with satellite information collected by 13

the USDA.

The USDA flies satellites over agricultural areas in the country every 16 days. Each area is covered every 16 days. And they take that satellite imagery and use it to figure out field by field what farmers are growing. It's an incredible amount of information.

So we took Georgia's information on agricultural water use and matched that up center-pivot by center-pivot with what we knew from the satellites about what was being grown on each field. We controlled for soil quality.

It's -- also information was collected by the

THE REPORTING GROUP

Mason & Lockhart

2856

back-checking to make sure that the caps are enforced. But, then again, there is an element of local control that makes it more palatable to

the growers.

in my testimony.

5 **Q.** Now, we have talked a little bit in this case 6 about M & I uses, municipal and industrial. And 7 could you give the Court a sense of your 8 real-world, practical experience on that, too.

A. Sure. Well, I'll give you just some recent experience. I know Atlanta has gone through some revisions to its long-term water demand forecast and water supply planning. I actually did the same thing for the Los Angeles and San Diego area combined for an entity called the Metropolitan Water District, kind of a similarly-generic name to what you have in Atlanta. So I did that for LA and San Diego.

I also did it for San Francisco and the Silicon Valley, developed their long-term demand forecast and evaluated the effects of different conservation programs on their usage.

22 Q. All right, sir. So let's turn to the specific 23 elements of this case. And I would like you just 24 to start briefly by describing how you took that 25 experience and used it to focus on specific ways

THE REPORTING GROUP Mason & Lockhart

1 USDA, and got a picture. Again, a disaggregated

2 picture. So not just looking at basin-wide

3 averages, but a disaggregated picture of what was

happening with respect to agricultural water use. 5 So it really, I think, is a -- as an academic, I

6 would say that is a big accomplishment.

7 Q. And in -- you used the word a few times

8 depletions. And I believe you are referring to

9 rivers or tributaries when you say that. Could

10 you explain that term.

11 Α. Sure. Depletion is a reduction in the amount of 12 water that's in a stream. So you might have one 13 level of water before some action is taken and 14 then another level afterwards.

15 Q. So, sir, when Mr. Primis was up here, he was

16 asking you about a three-page or maybe it was a

17 four-page assembly of tables. I would like to

18 actually look at your full prefiled direct in

19 pages 44 and 45. So we can go, first, to the

20 specific agricultural measures that you're

21 talking about.

22 But importantly, there is not just one table 23 on that page 45 -- or 44 and 45; is there?

24 That's right.

25 Q. And the first of three tables is for 2000. But

THE REPORTING GROUP

Mason & Lockhart

2858

2862

1

6

7

- 1 could you describe the other two tables, please? 2 A. Sure. So I have three tables looking at the
- 3 fiscal costs of possible combinations of
- 4 conservation measures that would achieve. The
- 5 first table, table 4, looks at 2000. The next
- 6 table on the bottom half of the page looks at
- 7 1500 cfs, so less aggressive measures. And then
  - the third table on the next page looks at the
- 9 thousand cfs.
- 10 Q. Now, these aren't the exclusive measures that
- 11 Georgia could apply to achieve these aims; are
- 12

8

- 13 A. No, definitely not. And one theme I tried to
- 14 advance through my different reports is that
- 15 Georgia has a lot of options for reducing
- 16 depletions. You know, ultimately they will have
- 17 to choose which ones make sense for them. But my
- 18 testimony is that they have a lot of options that
- 19 are practical that can achieve these reductions 20 in depletions.
- 21 **Q.** And those other options are discussed throughout
- 22 your prefiled direct; is that right?
- 23 A. Yes.

1

- 24 Q. Okay. So let's turn to this question. Why did
- 25 you choose the specific options you have here on

## THE REPORTING GROUP

## Mason & Lockhart

2860

- table 4 on page 44 of your prefiled direct?
- 2 A. What I was trying to illustrate with the way I
- 3 chose the measures is I have some that impact
- 4 urban areas and others that impact agriculture.
- 5 I have some measures that are permanent, some
- 6 that are temporary and invoked only in dry years.
- 7 And then I have some measures that through my
- 8 analysis I have come to believe are quite low
- 9 cost, and others that might be palatable for
- 10 other reasons, but might be a little more
- 11 expensive.
- 12 Q. Well, sir, if we might, I would like to start, as
- 13 you suggested, with just the agricultural
- 14 measures. Then we'll get back to the measures
- 15 for municipal and industrial. But I believe the
- 16 first agricultural measure on your table 4 is
- 17 titled Eliminate Unpermitted Acreage. Do you see
- 18 that, sir?
- 19 A. Yes, I do.
- 20 Q. Could you describe that for us?
- 21 A. Sure. Through the course of our work on this
- 22 case, in particular once we received the complete
- 23 wetted acreage database in July of this year,
- 24 what we were able to do is compare what the
- 25 wetted acreage database says is happening permit

THE REPORTING GROUP

Mason & Lockhart

- by permit with respect to the amount of irrigated
- 2 area and compare that to the actual permit terms.
- 3 The permit for groundwater withdrawal will
- specify an amount of land that can be irrigated 5
  - with each permit.

This is a very simple analysis. We have just compared one dataset entry to another.

- 8 Q. And what did you find?
- 9 What we found is that there are a large number of
- 10 groundwater withdrawal permits where users are
- 11 irrigating more acres than they're allowed under
- 12 their permit conditions, up to something like
- 13 90,000 acres.
- 14 **Q.** And that is principally in the Lower Flint Basin?
- 15 Α.
- 16 **Q.** Now, the next item on there reads eliminate
- 17 excessive irrigation on -- of rotation crops.
- 18 What rotation crops does that relate to?
- 19 So my analysis concerns cotton, soybeans, and
- 20 corn. Those are the three that I looked at for
- 21 this excessive irrigation analysis.
- 22 Q. Okay. Throughout this case so far we have heard
- 23 a phrase that --
- 24 A. Sorry. Did I say soybeans?
- 25 Q. You did.

THE REPORTING GROUP

Mason & Lockhart

A. I meant peanuts. Sorry.

- 2 **Q.** So, sir, I'm sorry for interrupting you.
- 3 Throughout this case we heard this phrase
- 4 from Georgia's counsel, and I think it said
- 5 something like wipe out half of Georgia
- 6 agriculture.
- 7 Α. Yes.
- 8 **Q.** Is that what you're doing here on this table?
- 9 Α. Absolutely not.
- 10 Q. Can you explain why not?
- 11 A. Sure. This is why we went to all the time and
- 12 trouble to do such a careful analysis of matching
- 13 up what farmers were growing with what soil type
- 14 they're operating on and how much water they're
- 15 using. So, again, we're doing this analysis
- 16 pivot by pivot.
- 17 Q. I'm sorry. Can you describe what a center-pivot
- 18
- 19 Α. Sure. A center-pivot system, you know, is the
- 20 circular area that's irrigated with a
- 21 center-pivot.
- 22 In designing any conservation program, 23 whether it's for residential electricity or
- 24 agricultural water, the first place you look is
- 25 to users who are wasting the resource, who are

THE REPORTING GROUP

2865 1 using way more than some norm. And so by doing 1 water that farmers employ when they're adequately 2 such a disaggregated pivot-by-pivot analysis of 2 motivated to do that. Isn't that right? 3 water use, we were able to identify the fraction 3 Yes. I see it in my work all the time. 4 of growers who are using more than they would Economics is fundamentally about incentives, need possibly to grow their crop. 5 so this is a question I have studied in the area 6 Q. Now, when you say more than they would need, how 6 of agricultural water use. 7 is that generally measured? 7 MR. PERRY: Your Honor, may I approach 8 8 Is it inches, or how does one do that? to hand an exhibit to the witness? 9 A. Yes. It's measured in terms of inches per acre 9 SPECIAL MASTER LANCASTER: Certainly. 10 10 over the course of a growing season. A. Thank you. 11 Q. And do you know if Florida in its part of the ACF 11 Now, sir, I have handed you Joint Exhibit 154, 12 Basin has an absolute limitation on the number of 12 which we have discussed at some length in this 13 inches that can be applied per acre? 13 proceeding already. But what I would really like 14 A. It does. 14 to do is ask you just to focus on the second page 15 Q. But Georgia does not? 15 as we discuss page 44 of your report. And in 16 A. That's my understanding. 16 particular, the bullet points that are preceded 17 Q. Okay. Pardon me, sir. And in drought years is 17 by the sentence, EPD's initial analysis has 18 it your observation that more or fewer inches per 18 suggested several options for further evaluation. 19 acre are applied? 19 Do you see that, sir? 20 20 A. A. Oh, a lot more. Water -- water demand goes up in 21 21 Q. a very dry year to replace the precipitation that Now, I want you to keep that in mind while we 22 22 talk about what's on your table 4 on page 44. is not coming. 23 23 **Q.** So why would a farmer apply too many inches per Okay? A. 24 24 acre? Sure. 25 25 Q. You know, in my original report I have this under So the next item on table 4 is -- on your table 4 THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2864 2866 1 a section on management decisions or farmer 1 on page 44 of your prefiled direct is irrigation 2 2 behavior. permit buy-back. Do you see that? 3 Why do people leave the light on when they 3 Α. 4 walk out of the room? Why do they leave the 4 Q. Now, if you look at JX-154, which I have -- and 5 5 faucet on when they're brushing their teeth? then you look across to see where it says 6 This is not an uncommon finding when it comes 6 temporary removal of land from irrigation, do you 7 7 to utilities and consumer behavior. see that? 8 Remember, the water that farmers are using, 8 Α. I do. 9 9 Q. All right. Now, temporary and permanent removal the groundwater that they're using, is very, very 10 inexpensive. They pay nothing for it beyond the 10 are both possible in concept. Right? 11 11 energy cost of lifting it out of the ground. So Α. Absolutely. 12 12 they're just paying, you know, a few dollars per And do you see one bullet up on JX-154 where it 13 13 acre. And given that, they don't have much says acquiring easements for permanent removal of 14 incentive to be careful. 14 irrigation? 15 15 A. I do. Q. Some are; isn't that right? 16 A. Some are. You know, people are not robots. Some 16 Is that the same concept that you're evaluating 17 people are careful. Some people are less 17 in table 4 just under the subheading Additional 18 careful. 18 Agricultural Measures? 19 And what we're identifying in this 19 Α. Yes. Easements are a very common mechanism in my 20 conservation measure is some fraction of 20 experience for achieving reductions in 21 people -- it's not a majority; but it's some 21 irrigation. 22 22 fraction who are not as careful as they should Remember that what I'm talking about, either 23 23 a permanent or a temporary buy-back of irrigation 24 Q. Now, from your work on agriculture and other 24 rights, that doesn't foreclose the possibility of 25 25 contexts, you know that there are ways to save farming. It's not like these acres shut down. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

2869 1 They just convert from one type of agriculture; 1 some irrigation water. 2 namely, irrigated agriculture, to dry-land or 2 Q. And then next you have got farm ponds. Do you 3 rain-fed agriculture. And so the way one could 3 see that, sir? 4 do that is by acquiring an easement or a Α. Yes. 5 restriction on the land that would prevent Q. Describe what that means. 6 farmers from irrigating in exchange for some 6 Farmers have farm ponds, small impoundments that 7 payment of money. they use for a number of purposes. The ones I'm 8 Q. Are you aware of any federal programs that either 8 looking at here are related to production of the 9 temporarily or permanently pay farmers not to 9 rotation crops primarily. 10 irrigate? 10 Q. And so a restriction to reduce evaporation would 11 Α. Absolutely. 11 have some effect? 12 Q. Can you describe those, please. 12 Α. 13 A. Sure. Well, the -- again, back to the Klamath 13 Q. And that -- is it your view that that would save 14 Basin. That was a good example of a successful 14 water and thus reduce depletions in the river? 15 auction program where the farmers were paid to 15 Yes, certainly. Farm ponds evaporate in the hot 16 reduce their irrigation or curtail irrigation on 16 summer sun, and water is lost to the system --17 certain acres in exchange for a money payment. 17 large amounts of water. 18 **Q.** And any other federal programs you can think of 18 **Q.** Now, lastly, you have got switch high-value crops 19 that put aside acreage for conservation and the 19 to deeper aquifers. And I would ask you, while 20 20 like? keeping that in mind, to look at the exhibit I 21 21 A. Of course. At a larger scale, the federal gave you, JX-154. 22 22 Α. Yes. Conservation Reserve Program, which works through 23 23 Q. And do you see where in this, the same group of a market mechanism, that results in the 24 retirement of millions of acres across the 24 bullets, it says transferring water users to 25 25 country every year. And other programs that are deeper aquifers? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2868 2870 1 similar would include EQIP and the Wetlands A. I do, yes. 2 Reserve Program. So this is in my experience a 2 And it's got surface water in Floridan Aquifer 3 very common type of a public policy. 3 users? 4 Q. Now, the next item on your chart -- and I don't 4 Α. Yes. This is what -- what was discussed at this 5 5 want to ask you to spend too much time on this; meeting was the concept of transferring surface 6 but it reads deficit irrigation. Do you see 6 water users and then users on the Floridan 7 7 that? Aquifer down to deeper aquifers below the 8 A. I'm sorry. Where are we? 8 Floridan. 9 **Q.** I am back in your prefiled direct. 9  ${\bf Q.}\,\,$  And when you say this meeting, you're referring 10 10 A. All right. to JX-154, which is titled Georgia Environmental 11 11 **Q.** That's why I was trying to refer you to your Protection Division Stakeholder Meeting Summary. 12 12 chart. Right? 13 13 But it says deficit irrigation. It's just A. Yes. JX-154. 14 under the irrigation buy-back on page 24 of your 14 Okay. Now, can you -- and, I'm sorry, back to 15 15 table 4. Are you with me? your prefiled direct again, page 44, switch 16 A. Yes. 16 higher -- switch high-value crops to deeper 17 Q. Very quickly, could you describe how that differs 17 aquifers. Just very briefly can you describe 18 from eliminating excessive irrigation? 18 what that means. 19 A. Sure. Eliminating excessive irrigation would 19 Α. Sure. What I'm envisioning here in this measure 20 prohibit farmers from irrigating above a 20 is switching a fraction of farmers that are 21 biological maximum. The deficit irrigation is 21 producing high-value crops like pecans or farmers 22 about reducing water application below the 22 who run greenhouses or grow turf grass, switching 23 biological maximum. So what happens is farmers 23 75 percent of them -- so not all, but 75 percent 24 might apply a little bit less water and get a from surface water sources in the Floridan down 24 25 25 little bit less yield; but they're still applying to deeper aquifers. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

Mason & Lockhart

1 your charts that your number or your methodology 1 make a decision about whether or not to irrigate, 2 2 has somehow dramatically changed, is that fair? they're making an economic choice. To irrigate, 3 A. No. 3 farmers have to, in the first instance, purchase 4 MR. PERRY: Now, your Honor, it's just equipment, very expensive equipment like a 5 about 2:30, which is our typical time for a 5 center-pivot system, to apply irrigation water. 6 break. 6 So there's a cost -- an upfront capital cost of 7 SPECIAL MASTER LANCASTER: It's fine by me. 7 irrigating that farmers would have to compare to 8 MR. PERRY: Okay. We'll have a short 8 the benefits of irrigating. 9 break. 9 Another category of cost is the cost of the 10 (Time Noted: 2:30 p.m.) 10 water, lifting it up out of the ground, if 11 (Recess Called) 11 farmers are irrigating with groundwater. 12 (Time Noted: 2:40 p.m.) 12 **Q.** Would that be a pump? 13 SPECIAL MASTER LANCASTER: Ready? 13 A. A pump, exactly. So they have to pay an energy 14 MR. PERRY: Thank you, your Honor. 14 cost, and the cost of the well and the pump to 15 BY MR. PERRY: 15 get that out of the ground. 16 Q. Now, you mentioned, when Mr. Primis was up here, 16 **Q.** Dr. Sunding, do all farmers in Georgia irrigate? 17 17 A. No, sir. No. Certainly not. crop insurance. Is that -- is the premium for **Q.** About what percentage do? 18 18 crop insurance federally subsidized? 19 A. Well --19 A. It is. Crop insurance is not what we call 20 20 SPECIAL MASTER LANCASTER: Mr. Perry, do actuarial fair, meaning that the payouts don't 21 21 you want to just raise that microphone a have an expected value equal to the premiums. 22 little. 22 **Q.** Do farmers have the option to insure against some 23 23 loss in yields and perhaps a loss of a crop in an Thank you. 24 MR. PERRY: Is that better? 24 extreme circumstance through crop insurance? 25 SPECIAL MASTER LANCASTER: Much. 25 A. They do. There are federal programs that insure THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2876 2878 A. Do you want to ask the question again? 1 against crop loss, including drought loss. 2 2 **Q.** I will. What percentage of Georgia farmers in **Q.** And including yield and not to the entire crop? 3 the Flint and Chattahoochee Basin irrigate? 3 A. Yes. Q. So, sir, I would like to focus back now where we 4 A. It's about half. 4 5 **Q.** And have you looked to see the number of farmers 5 were before the break. That's on page 44 of your with small farms or large farms that irrigate? 6 prefiled direct, table 4. And now, I would like 6 7 A. I have. The agricultural census that the USDA 7 to ask you to do something a little different. 8 8 performs every five years has statistics on the I understand you have some markers up there, 9 fraction of farmers that irrigate over different 9 and I can see the tablet. I want to make sure 10 size categories. 10 the Court can see the tablet. 11 **Q.** All right. And do larger farms tend to irrigate 11 But if you don't mind, sir, I would like to 12 12 have you rise and identify graphically what your more or irrigate less, or is there any 13 13 2,000 cfs actually means. And we can do it item statistically significant difference? A. There -- larger farms, you know, over several 14 14 by item on your chart; but if you could draw that 15 hundreds or several thousand acres, tend to 15 out, I would appreciate it. 16 irrigate somewhat more; and some smaller farms 16 A. All right. 17 tend to irrigate more. So there is somewhat of a 17 SPECIAL MASTER LANCASTER: Doctor, 18 pattern in the data. But there are farmers 18 please keep your voice up. 19 across every size category, significant numbers, 19 THE WITNESS: I will. SPECIAL MASTER LANCASTER: Thank you. 20 that chose not to irrigate in the ACF Basin. 20 21 21 **Q.** Why would it be economic not to irrigate? THE WITNESS: I'm used to teaching, so I 22 22 A. Well, to -- to understand -- you know, we have can talk loud. 23 23 heard a lot in the questions from Mr. Primis Can I move this a little bit --24 about the benefits of irrigation. There are 24 MR. PERRY: With the Court's permission. 25 costs of irrigation as well. And when farmers 25 THE WITNESS: -- so you can see it? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

2879 2881 1 A. Is that all right? 1 irrigation, the outdoor water use, is higher in 2 2 Q. It's fine with me. the summertime, so higher in, like, the June-July 3 MR. PERRY: I want to make sure that the 3 time frame. 4 Court --So if you stopped water use, the reduction in 5 MR. PRIMIS: Do you have a marker? 5 depletions you would get would look something 6 THE WITNESS: I do. 6 like that (witness drawing). 7 Can you see what I'm --7 Q. And, again, that's a municipal type of measure. 8 MR. PRIMIS: I'll make it over there if 8 9 I need to. 9 A. Yes. 10 THE WITNESS: Okay. Sure. 10 So then let's move to the agricultural side 11 BY MR. PERRY: 11 and measures that reduce agricultural 12 Q. Please proceed, sir. 12 consumption, permanent or temporary buy-back, 13 A. All right. So what Mr. Perry asked me to 13 measures like deficit irrigation. 14 illustrate was how do these conservation measures 14 Crop water use also peaks out in the 15 add up to a 2,000 cfs reduction in depletions. 15 summertime. And so what that would look like is 16 16 And so I will draw it like this. something like this (witness drawing). 17 So on this axis, what I would like to show is 17 And I drew it a little bit larger because 18 18 months of the year. So we'll do this over a there's more agricultural water use than urban. 19 calendar year and start in -- start in January. 19 So when I talk about a measure that improves 20 20 streamflows by 2,000 cfs, I'm evaluating that at And then we go through June and then on to 21 21 December. So this is, you know, as we go the peak month, which is June. 22 22 throughout the calendar year. Q. Now, why would there be more use in June than, 23 And then what I would like to show on this 23 say, January? 24 axis is a reduction in consumptive use that 24 A. Because both -- what has a temporal pattern is 25 results from implementing different measures. 25 the outdoor water use and then the crop THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2880 2882 1 Okay. So just to get oriented what I'm 1 irrigation because crops grow in the summertime, 2 2 showing here, so with a measure like leak and they need more water. The plants use more 3 3 abatement, which is one of the measures I'm water in the summer. Q. Now, one related question, if I might, sir. Does 4 talking about --4 5 5 **Q.** Is that a municipal measure, leak abatement? this differ from year to year how your curves 6 A. It is. This is fixing the leaky pipes in the 6 look? 7 7 Δ. Yes. distribution system. 8 The leaks in the pipes happen as a result of 8 Q. And why is that? 9 pressurization. The water in the urban system is 9 A. Well, what would happen, say, if we looked at a 10 under pressure to move it around. And so the 10 year that was drier than the one I'm drawing up 11 11 leaks happen all-year-round because the system is here, in a drier year, absent any kind of policy, 12 12 under pressure all-year-round. So a program of both residential consumers and farmers have 13 leak abatement would result in a reduction in 13 higher demand for water. So these curves would 14 consumption that was about the same from one 14 be higher. 15 month to another, again, because the water is 15 Q. Could you help us by totaling out and showing 16 16 graphically what the combination of those under pressure. 17 So this would be, say, leak abatement. So 17 measures would be? 18 I'll just call that leaks. 18 A. Sure. So what I would do is add these up month 19 And then a second measure would be reducing 19 by month. So I'm going to add them up this way, 20 urban outdoor use, say, through an outdoor 20 you know, vertically. And what I would get would 21 21 watering ban, like what Atlanta put in place in be something that would look like that. So this 22 2008. 22 would be the total. 23 23 So if that were to happen, there's not much Q. And can you identify, just keeping in mind your 24 irrigation in January. Nobody waters their lawn 24 chart that says 2,000 cfs -- it's table -- I 25 in January, at least they shouldn't be. But that 25 should say your table, it's table 4, where that THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 2883 2885 1 2,000 cfs would fall. 1 could you give us your thoughts on that, please. 2 2 A. It's right there. I'm labeling that as Α. Sure. Like I illustrate in these tables, I think 3 agricultural and outdoor water use. 3 a way that Georgia could -- could implement a 4 Q. Okay. I'm sorry. What I was trying to ask was 4 consumption cap, again, Georgia has already 5 could you put a point on that drawing that shows 5 considered itself as we have been through a few 6 where 2,000 cfs would be. 6 minutes ago in the last document you showed me. 7 A. Sure. The sum total of the reduction in 7 What I have in mind here is a combination of 8 consumption from these three measures in this 8 permanent easements, permanent buy-backs, 9 example has a peak value of 2,000. 9 additional buy-backs of irrigation rights that 10 So when I talk about 2,000 in those tables 10 could be put in place in dry conditions, and then 11 that Mr. Perry is showing up there, this is what 11 limitations on amounts of water that farmers 12 I mean. So 2,000 reduction in peak usage. But 12 could use beyond that, if they chose, you know, 13 there are also reductions that happen in other 13 not to take the buy-out and go ahead and continue 14 times of the year. 14 irrigating. 15 Q. Now, we haven't talked about net basin exports; 15 Q. So --16 A. So what -- you know, what I have in mind there 16 but you could easily -- we didn't put it on the 17 chart yet, but you could easily factor that in, 17 would be to implement the deficit irrigation too. Right? 18 18 scheme. What Georgia could do is what the states 19 A. Yes. Sure. That would be another line like this 19 do all over the country and tell farmers, well, 20 20 look, you can't use 20 inches or 30 inches or 14 red one down here. 21 21 Q. Okay, sir. Now, in various places in your inches in this year given drought conditions. 22 22 prefiled direct testimony you talk about peak You only have 8 inches or 6 inches. Now, you use 23 use. Is 2,000 the peak use there? 23 that the way you want, but you only have this A. Well, 2,000 is the peak reduction. The actual much water per acre. And it's less than what 24 24 25 usage could be much higher than that. 25 you're used to and less than what you need to THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2884 2886 1 **Q.** That's a fair point. And you have used the term 1 grow at the biological maximum. 2 depletions; you defined it for me before. Is 2 **Q.** So, sir, let me ask my question just a bit 3 that 2,000 a depletions number? 3 differently than that, if I might. You talked 4 4 A. Yes. about Newlands and Klamath and Imperial Valley 5 5 Q. And that means that that much river water and Republican River; and I would like to get a wouldn't be used and, therefore, you would have 6 6 picture, given all of your experience, as to how 7 7 that much more? an independent administrator of a depletion or a 8 8 A. That's correct. consumption cap might actually, as a practical 9 Q. Okay. Now, I would like to focus just for a 9 and verifiable manner, go out and ensure that 10 10 Georgia, using whatever measures they chose, moment on how this type of cap on depletions or 11 consumption might be administered. 11 including among your options, actually complies. 12 A. Can I sit? 12 So could you help us work through that issue? 13 Q. Sure. Sit back down. 13 Α. Sure. The big issue there, I think I would see 14 MR. PERRY: And if I could approach, your 14 immediately, is how do you know that whatever 15 Honor, I would like to hand out --15 measures you put in place on the ground are, in 16 SPECIAL MASTER LANCASTER: Please. 16 fact, reducing consumption by the amount that the 17 BY MR. PERRY: 17 Court requires. So there is an element of 18 Q. Now, sir, what I have just handed you is our 18 verification, and that involves a suite of 19 effort to capture your beautiful drawing on an 19 measures that in my experience are pretty 20 exhibit. And it's Florida Exhibit 895. 20 commonly done. You would want to look at how 21 But what I would like to talk about now, 21 much water farmers are actually using, so back to 22 22 given your experience with all the other the metering issue. You would want to be 23 23 agricultural reduction measures you have talked monitoring that. You would want to take a look

about in other places, how this type of depletion

THE REPORTING GROUP

Mason & Lockhart

or consumption cap could actually be managed. So

24

25

24

25

at what is happening with respect to -- you know,

look around the landscape and see what areas are

THE REPORTING GROUP

1

being irrigated and which ones are not. But then beyond that, I would go and look at or I would think that the State would want to go and look at stream gages and actually check and see what's happening in the river and are you getting the responses that you think you should get that -given whatever consumption cap is in place that

1

So the combination of looking at what farmers and urban users are actually doing and then does that translate into environmental changes in the way that one would think.

- 13 **Q.** Okay. Sir, there's a concept that hasn't come up 14 much yet in this trial; but I would like your 15 help with it, adaptive management. What do those 16 two words mean?
- 17 A. Sure. So adaptive management is a very common 18 concept in environmental management situations. 19 And what it involves is setting some goals, some 20 environmental performance goals, and enacting 21 measures to achieve those goals. And then you 22 check and see, did things perform the way you 23 thought? If not, then maybe we need some course 24 corrections. Maybe we need other measures, 25 tougher, looser, whatever. But it's adaptive.

THE REPORTING GROUP Mason & Lockhart

2888

You don't just set a set of policies in place for all time and never revisit them. It's adaptive. You check and see how the environment is responding and go back and adapt as needed.

- 4 5 **Q.** So you mentioned in particular earlier Imperial 6 Valley where farmers could move their water 7 around. And there was a -- I think you said a 8 water district. Thinking about your concept of 9 adaptive management, in that context or other 10 context, what does that actually mean in terms of 11 verifying that the results are being achieved?
- 12 A. Right. So in -- in that case, they actually have 13 an extensive verification program where they will 14 look at satellite imagery. They look at water 15 metering in the way I was discussing to make sure that compliance is being achieved.
- 16 17 Q. Now, sir, I would like to come back to some of the 18 charts that Mr. Primis examined with you. And 19 the first of those is under a tab in the binder 20 he handed out called Sunding Demonstratives. 21 It's titled Sunding M & I Remedy Versus Total 22 M & I Consumption. Can you try to find that and 23 let me know when you have.

24 A. I have quite a pile built up over here. 25 It must be in the back.

> THE REPORTING GROUP Mason & Lockhart

All right. Yes, I have it.

2 Q. Now, when Mr. Primis was asking you about this, I 3 think he referred to Dr. Flewelling a few times

4 and Dr. Hornberger, too. But I think you wanted

5 to explain in a little more depth when you were

6 testifying about this what your response was to

7 Mr. Primis's questions. So I would like to

8 invite that explanation, if I might.

9 Α. Sure. Well, the implication of Mr. Primis's 10 question is that I'm asking for more reduction in 11 consumption than is actually taking place, at

12 least in most years. And I don't think that's

13 accurate.

14 Q. Now, this chart doesn't include all of the 15 relevant consumptive use; does it?

16 Α. No, it doesn't. This chart doesn't include, for 17 example, urban systems that are serviced by 18 groundwater sources. This is only surface water. 19 And groundwater is about 15 percent of the total 20 water supply in this area.

21 Q. So in a hot and dry summer, what percent of urban 22 consumption would be outdoor water use?

23 Α. It's -- you know, it varies by sector. I would say multi-family residential will have a smaller 24 25 outdoor percentage than businesses or single-family

THE REPORTING GROUP

Mason & Lockhart

1 residences. But it's in the neighborhood of 20

percent in this part of the country.

3 **Q.** Okay. Now, if you could turn with me, please, to 4 the tab that's called -- that's marked -- that's

5 labeled Florida Complaint.

6 A. All right.

2

7 Q. And there I would like you to turn with me in

8 this tab to page 21, which was also a focus of

9 some of Mr. Primis's questions.

10 Α. Page 21?

Q. Yes, please, sir. 11

12 Α. All right.

13 Q. Now, sir, I believe Mr. Primis was referring

14 to what's labeled Prayer For Relief there.

15 And there's an indication there of a date,

16 January 3, 1992. Was 1992 a very wet year;

17 do vou know?

18 A. I don't believe so, but I don't know.

19 **Q.** And -- it wasn't a drought year though; was it?

20 Α.

21 Q. All right. Now, in a nondrought year you're

22 going to see substantially less consumption of

water than in a severe drought year. Right?

24 MR. PRIMIS: Objection, your Honor.

25 Leading.

TRIAL - November 17, 2016 (Vol. XI) Florida v. Georgia 2891 2893 1 BY MR. PERRY: to or valued the basin in Florida -- part of the 2 2 Q. What, if any, difference in the amount of water ACF Basin in Florida. Do you remember those 3 would you expect between a severe drought year 3 auestions? 4 and a nondrought year? A. I do. 5 A. Well, as we discussed and what I believe is shown 5 Q. All right. Could you focus with me for a moment 6 on the figure that we were just looking at, the 6 on how an economist would look at a pristine 7 amount of consumptive water use can vary 7 natural area like the ACF -- or like Florida's 8 8 considerably between average, wet, and dry years part of the ACF Basin? 9 because the outdoor water use changes quite a bit 9 A. Sure. What we normally do to come up with an 10 between those scenarios. 10 economic value for a natural area is to consider 11 **Q.** So let me focus just a minute on agriculture 11 what we call ecosystem services, so a range of 12 again. And when we're thinking about the amount 12 benefits to human beings that flow from those 13 of water used on a field, not just the acreage, 13 environmental resources. 14 it's the amount of water applied; is that fair? 14 For example, a forest could be used for 15 A. That's right. Agricultural water demand is the 15 cutting timber; that would be a commercial use. 16 product of the number of acres irrigated times 16 It could be used for hiking or bird-watching; 17 the amount of water that's applied per acre. 17 that would be a recreational use. And it might 18 18 **Q.** Could you explain what you would expect in terms also have some value as habitat for endangered 19 of the amount of water applied per acre in a 19 species or, you know, other types of amenities. 20 20 Q. And you teach at California, Berkeley. Right? drought year as opposed to a normal or a wet 21 21 vear? Α. I do. 22 22 A. Sure. I actually have dry figures on this Q. Now, has there been a change in the way that the 23 through my analysis. And this is what Georgia 23 faculty there in your department instruct farmers are actually applying in different types 24 24 students as to how to look at ecosystem services 25 25 of water years. over the years? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2892 2894 1 If you look at my direct testimony on page --1 A. There has been. I'm the chair of the Department 2 on page 15, for example, if you look at table 1, 2 of Agricultural and Resource Economics at 3 I have derived figures here for average 3 Berkeley. We are, I don't mind saying, by any 4 irrigation depths for different crops grown in 4 measure the No. 1 department in the field in the 5 5 the ACF Basin. And I have compared them between world. We produce more graduates who go on to 6 6 average or nondrought years and drought years. distinguished academic careers in environmental 7 **Q.** So let me just invite your attention to the 7 and resource economics than any other program. 8 8 totals at the bottom for average irrigation depth Our faculty got together a few years ago and 9 9 in a nondrought year. Do you see that? decided that we had enough misgivings about the 10 A. Yes. 10 valuation of what are sometimes called nonuse 11 11 **Q.** And could you compare that for us with the values -- so these values other than things like 12 12 average for a drought year. recreation and commercial activities -- that we 13 13 A. Sure. The average depth across the range of were actually not going to include that in the 14 crops grown in the basin in a drought year is 15 14 graduate curriculum anymore. So we do not teach 15 15 that because we don't think it's reliable enough, inches per acre. So, you know, 1-foot-3-inches 16 per acre. And in a nondrought year, the average 16 and there is not enough scientific consensus that 17 water use is only 9.1 inches per acre. 17 those methods are worthwhile. 18 Q. Okay. Would you regard that as a significant 18 But that doesn't mean, sir, that economists don't 19 difference? 19 understand the value of a pristine natural area? 20 Α. Oh, yes. 20 No. Definitely not. There are things that we 21 Q. Now, Mr. Primis also mentioned Dr. Phaneuf. You 21 can look to, like I have done here. For example, 22 22 know Dr. Phaneuf; don't you? conservation investments that are made by a state

> 25 THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

23

24

A. I do.

**Q.** And I believe he was attempting to discuss the

way that either you or Dr. Phaneuf had referred

25

or by nonprofit groups here like the Nature

indicator of value.

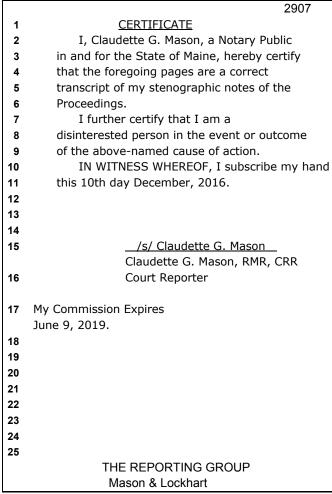

Conservancy or Trust for Public Land as being an

2897 1 Q. And you weren't here when Secretary Steverson was Q. Now, I would like to invite your attention, if I 2 2 presented and Georgia decided not to cross him, might, to page 24 of 34. And there -- have you 3 but are you aware of all of the investments that 3 found that page yet, sir? 4 the State of Florida has made to preserve the 4 A. I have it, yes. 5 pristine nature of the river and bay? 5 Okay. There I asked Dr. Cowie, during the exam 6 A. Yes. I think I even included some of those 6 earlier this week, about the last two sentences 7 statistics in my direct testimony. I think the 7 there -- it's actually the last sentence. And in 8 number is something like almost half a billion 8 particular the sentence begins with, quote, the 9 dollars. 9 issue of what is practical will cost. Do you see 10 MR. PERRY: Your Honor, may I approach 10 that, sir? 11 to hand out one more item? 11 Α. I do. 12 SPECIAL MASTER LANCASTER: Certainly. 12 Q. And then it ends with at least 3.5 million for 13 BY MR. PERRY: 13 each million gallons of water per day. Do you 14 Q. And, sir, what I believe I have handed you is a 14 see that? 15 page from Mr. Primis's opening statement. And 15 Α. I do. 16 part of the text on that page is gray. It -- the 16 Q. Now, your report goes through in some level of 17 question posed is apart from the survey, and then 17 detail, as we have discussed, a wide range of 18 it begins in black text. Could you tell us what 18 options for Georgia; and you assigned costs to 19 the survey is there and why graying out that text 19 them. Do any of your options approach that type 20 20 struck you as inappropriate? of cost level? 21 21 A. Sure. Graying out that text changes the meaning A. No. They're far less than 3.5 million per mgd --22 22 of the question. per million gallons per day. 23 23 I conducted actually an extensive amount of **Q.** All right. Thank you, sir. MR. PERRY: Your Honor, just give me a 24 work to understand attitudes in Florida and 24 25 Georgia and Alabama toward the environmental 25 moment while I gather my things to sit down. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2896 2898 1 resources in the basin. And by that I mean both 1 SPECIAL MASTER LANCASTER: Sure. 2 gauging the public's awareness of these resources 2 **RECROSS-EXAMINATION** 3 and then whether or not they spend time and money 3 BY MR. PRIMIS: 4 to recreate at different sites in the basin. Q. Hello, Dr. Sunding. 5 And so, again, I think this -- this question 5 Α. Hello. 6 is disappointing because to me it reads other 6 **Q.** Mr. Perry gave you this slide from my opening. 7 7 than the part of your work where you attempted to Do you remember that? 8 value the environment, did you value the 8 I can't see the slide. 9 9  $\boldsymbol{Q}.\quad \text{It's the one with the picture of you.}$ environment? 10 10 Α. Yes. But that -- that was the point of doing the 11 11 Q. And just to be clear and also to be fair, when I survev. 12 12 MR. PERRY: Your Honor, I believe I have asked you the same question today, Dr. Sunding, I 13 13 one more exhibit I would like to hand up. introduced the survey. And I said, apart from 14 lust one. 14 the survey, have you attempted -- and then the 15 BY MR. PERRY: 15 rest of the question. You recall that. Right? 16 Q. Now, sir, this document is something that I'm 16 A. I recall you spoke those words today, yes. 17 fairly -- this document was a document used with 17 Q. And so your sworn testimony reflects this entire 18 Dr. Cowie just a couple days ago when she was 18 question and the same answer. Correct? A. 19 here. And have you seen it before? 19 Yes. 20 A. I have, yes. 20 Now, with regard to this survey, you did the 21 21 **Q.** Now, the first page of the document is labeled survey; and then you gave it to Dr. Phaneuf. 22 22 UGA River Basin Science and Policy Center. Do Right? 23 23 you understand UGA to be the University of A. That's right, yes. 24 And Dr. Phaneuf relied on it for his testimony. 24 Georgia? 25 25 A. I do, yes. Correct? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

2899 2901 1 A. Yes. 1 explain what you mean by disengaging? **Q.** And Dr. Phaneuf isn't coming to trial. Correct? 2 SPECIAL MASTER LANCASTER: By that I A. That's my understanding. 3 mean cutting off the two stretches. **Q.** Now, Dr. Sunding, we talked about the scenarios 4 THE WITNESS: I'm not sure that that where you had four at a thousand back in 5 would factor into my -- I'm trying to think 6 February; and then you ended up with 2,000 in 6 how it would factor into my economic 7 May and in your trial testimony. Do you recall 7 analysis. Most of the agricultural water use 8 that? 8 that I considered is in the Lower Flint. 9 A. Yes. That's -- it's not quite the full picture. 9 But, no, I don't think I considered that 10 But I also had 1500 in my first report. 10 specifically, the Upper and Lower Flint. 11 **Q.** Right. And I'm just trying to be efficient. 11 SPECIAL MASTER LANCASTER: I'm sorry. 12 I acknowledged you had 1500 in your first 12 What was your answer? 13 report when I crossed you before. Is that right? 13 THE WITNESS: Oh, that most of the agricultural water use I looked at was in the 14 A. Yes, you did. 14 15 **Q.** So, Dr. Sunding, when I asked you at your 15 lower part of the Flint River Basin. So if 16 deposition why you went from 1,000 to 2,000 cfs, 16 you meant disengaging the upper and lower 17 you refused to answer that question. Correct? 17 parts of the Flint; or did you mean upper and lower parts of the basin -- the overall A. Yes. I couldn't divulge conversations with 18 18 19 counsel. 19 basin? SPECIAL MASTER LANCASTER: Not 20 Q. I said, why did you do it? You said, I can't 20 21 answer that question without disclosing 21 necessarily. 22 conversations with counsel; it's privileged. 22 You didn't consider the possibility of 23 Correct? 23 disengaging them in any way? A. That's right. THE WITNESS: Well, if -- I want to make 24 24 25 MR. PRIMIS: No further questions. 25 sure I'm understanding your question. Most THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 2902 2900 1 SPECIAL MASTER LANCASTER: Mr. Perry? 1 of the urban water use occurs in the upper 2 MR. PERRY: Nothing further, your Honor. 2 part of the ACF Basin. And most of the 3 SPECIAL MASTER LANCASTER: Doctor, I 3 agricultural water use occurs to the south of 4 don't believe you have been here when I that in the lower part of the basin. I 4 5 5 considered measures that would reduce explained I'm not trying to be rude, but I 6 have to look into the microphone so that 6 consumptive use in both; but I have some 7 Claudette can take down what I'm trying to 7 measures that only impact use on the Flint. 8 8 So if that's what you mean by disengaging, say. 9 So --9 then I did have some scenarios that were 10 10 Flint only. THE WITNESS: Okay. 11 SPECIAL MASTER LANCASTER: So, first, 11 SPECIAL MASTER LANCASTER: Are you 12 12 familiar with the -- the Georgia agricultural welcome back. 13 THE WITNESS: Thank you. 13 metering program? 14 SPECIAL MASTER LANCASTER: You had the 14 THE WITNESS: Yes, your Honor. The 15 privilege and the pleasure of appearing 15 metering data was the basis for my analysis 16 before my former partner, Bill Kayatta, who 16 of, say, the excessive irrigation and deficit 17 is, for his brilliance and other 17 irrigation. characteristics, now on the 1st Circuit. I'm 18 18 SPECIAL MASTER LANCASTER: Are you about to prove that there is a reason that familiar with the 2006 Flint River Basin 19 19 20 I'm not Bill Kayatta. Plan? 20 21 In doing your work and making your THE WITNESS: Yes, your Honor, I am. 21 22 recommendations, did you consider the 22 SPECIAL MASTER LANCASTER: Are you 23 possibility of disengaging the Upper and 23 familiar with the ACF Stakeholders 24 Lower Flint? 24 Sustainable Water Management Plan? 25 THE WITNESS: Could you -- could you 25 THE WITNESS: I'm less familiar with THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart
