1	Q.	Sir, I would like to begin by discussing the	1		testimony that these particular aquifers have
2		geology and the groundwater hydrology of the ACF	2		lower connectivity, lower transmissivity than the
3		Basin. And to do that, I would like to turn to	3		Upper Floridan, you acknowledge that they do
		tab 1 of the first binder that was provided to	4		
4		'			directly intersect with the streams in the ACF
5		you. That should include a copy of your direct	5		River Basin in the depicted areas?
6		testimony in this matter.	6		Yes.
7	_	Yes, it is.	7	Q.	And if we're just focusing on the Claiborne,
8	Q.	May I request that you please turn to page 12 of	8		Cretaceous, and Clayton, there is approximately
9	_	your direct testimony.	9		136 acres sorry, 136,000 acres in Georgia's
10	Α.	Yes, I'm there.	10		portion of the ACF River Basin that are irrigated
11	Q.	And I would like to begin by focusing on the map	11		with water from the Claiborne, Clayton, and
12		that you have depicted on page 12. You have the	12		Cretaceous Aquifer?
13		ACF Basin highlighted with five different	13	A.	I do not recall the numbers off the top of my
14		aquifers in the area. Is that correct?	14		head.
15	A.	Yes. That's correct.	15	Q.	I understand. Perhaps you can turn to page 46 of
16	Q.	I would like to walk through the identity of	16		your direct testimony, and you will see a table
17		those five aquifers starting with the one that is	17		on page 46.
18		at the southern tip of the ACF Basin. Do you	18	A.	Yes.
19		have can you identify them and work our way	19	Q.	Does that table refresh your recollection that
20		up.	20		there's about 136,000 acres that are irrigated
21	A.	Yes. The southernmost aquifer that we see there	21		with water from the Claiborne, Clayton, and
22		is the Upper Floridan Aquifer.	22		Cretaceous?
23	Q.	And that's depicted in the blue color?	23	A.	In the outcrop area as well as underlying the
24	A.	That is depicted in the blue color.	24		Upper Floridan, yes.
25	Q.	And above that in the turquoise color, is that	25	Q.	And in evaluating the groundwater hydrology, you

13

19

21

1

1 **Q.** Okay. But you would disagree with anyone who

- says that the Claiborne, Clayton, and Cretaceous 2
- 3 are not connected to any streams in the ACF River
- 5 A. The Claiborne -- these other aquifers are not
- 6 connected when they are underlying the Upper
- 7 Floridan Aquifer; that is correct.
- 8 **Q.** What about in the outcrop area?
- 9 A. In the outcrop areas they are incised by the 10 streams in the basin.
- 11 **Q.** And when you say incised, what do you mean?
- 12 A. That means the streams do cut through these 13
- 14 **Q.** Okay. So let me go back to the question I asked.
- 15 If someone were to tell you that the Claiborne,
- 16 Clayton, and Cretaceous do not connect with any
- 17 of the rivers or -- the streams or rivers in the
- ACF River Basin, would you disagree with that? 18
- 19 A. I would agree with that if they are talking about
- 20 the aquifers when they are underlying the Upper
- 21 Floridan Aquifer.
- 22 **Q.** What about if they're talking about the basin in 23 its entirety, sir?
- 24 A. Well, then in the upper portion, it is connected;
- 25 and in the lower portion it is not. So I cannot

THE REPORTING GROUP

Mason & Lockhart

- Q. But you don't recall looking at this particular
 - one, sir?
- 3 Α. No. I don't.
- Q. May I direct you to page 1 of FX-933 and ask you
 - to read the first paragraph under scope of study.
- If you would kindly read that to yourself, sir.
- 7 Just the first paragraph?
- 8 **Q.** I think the first paragraph would be fine.
- 9 A. Okay. I read that.
- 10 Q. Okay. When you prepared your direct testimony,
- 11 were you aware that in 1983 the Georgia Geologic
- 12 Survey had commissioned a study to evaluate water
 - level declines in the Clayton and Claiborne
- 14 Aguifers in southwestern Georgia because of
- 15 increases in industrial, municipal, and
- 16 agricultural water use?
- 17 No, I was not.
- 18 **Q.** And if you now turn to the left-hand column on
 - the page, there's a paragraph that begins,
- 20 measurements of water levels. And it carries on
 - over to the right-hand side of the page. If you
- 22 might take a moment to review that, I'll have a
- 23 question about the last sentence of that
- 24 paragraph.

25 A. Yes. I read that.

THE REPORTING GROUP

Mason & Lockhart

3773

- 1 just answer yes for the entire basin.
- 2 **Q.** Okay. So let's talk about the outcrop areas.
- 3 Are they connected in the outcrop areas?
- A. Yes. 4
- 5 **Q.** But you would disagree with someone that says
- 6 they are not connected in the outcrop areas?
- 7 A. Yes.
- 8 **Q.** Sir, may I request that you turn to tab 3 of your
- 9 hinder
- A. Yes. 10
- 11 **Q.** Okay. Do you recognize the document behind
- 12 tab 3?
- 13 A. No, I do not.
- 14 **Q.** Okay. This document is designated as FX-933.
- 15 And it's a 1983 report titled Hydrogeology of the
- 16 Clayton and Claiborne Aquifers in Southwestern
- 17 Georgia. Are you familiar with the Georgia
- 18 Geologic Survey?
- 19 A. I know that there is a Georgia Geologic Survey.
- 20 Q. Okay. And did you review any reports or
- 21
- 22
- 23
- 24
- 25

THE REPORTING GROUP Mason & Lockhart

publications that they issued in this matter --I'm sorry. Did you review any reports that they issued in connection with the work that you did in this matter? A. I may have. I don't recall.

- 3775 Q. Okay. Were you aware when you prepared your
- 2 direct testimony that in 1983 the Georgia
- 3 Geologic Survey had concluded that the outcrop
- areas of the Claiborne Aquifer -- that increases 4
- 5 in withdrawals from that outcrop area could cause
- 6 declines in baseflows?
- 7 A. I wasn't aware that -- of this document; but if
- 8 you are withdrawing water, that could cause a
- 9 decline in baseflows. That's not surprising to
- 10 me.
- 11 **Q.** And the decline will vary depending on where
- 12 you're withdrawing water from. Is that correct?
- 13 A. Sure. It would vary where you're withdrawing 14 water from.
- 15 Q. And as a general matter, the closer you are to
- 16 the stream, will it have a greater impact?
- 17 A. The closer you are to the stream, you will have a 18 greater impact on the groundwater flow to
- 19 streams.
- 20 **Q.** And that term is -- the groundwater flow to
- 21 streams, is that called baseflow?
- 22 A. Yes. That is baseflow.
- 23 Q. Thank you, sir.
- 24 Okay. And in evaluating the impact of
- 25 groundwater withdrawals in the -- from the Upper

TRIAL - November 29, 2016 (Vol. XV) Florida v. Georgia 3782 A. Yes. That's what's written here. 1 explain that the 2006 Jones and Torak model does, 2 2 I do want to point out that these -- these quote, only a fair job at best, end quote, of 3 parameters are the -- what he talks about here, 3 predicting the impact groundwater withdrawals 4 the overlying semiconfining unit heads are part have on surface flow? 5 of the hydrology and that the impact of pumping 5 A. No. Even the scientists who are on Florida's 6 does not depend on the hydrology itself. It 6 team have said that this is the best available 7 depends on the actual pumping. 7 model. 8 Q. I understand that, sir. 8 **Q.** And you would agree with me that Mr. Hicks 9 A. So as far as my evaluation is concerned of the 9 criticizes that model in this e-mail? 10 impact of pumping, it did not make a difference 10 A. I see that here, yes. 11 if I did not have the absolute correct hydrology 11 Q. Let's turn back to tab 4, the USGS publication at 12 for the system. 12 JX-18. 13 **Q.** Okay. When you prepared your direct testimony, 13 A. Yes. 14 you also knew that Jones and Torak had noted that 14 **Q.** Now, the model is used to evaluate groundwater 15 particular parameters in your model were, quote, 15 impacts on streamflow in a certain portion of the 16 16 subject to large uncertainty? ACF Basin; is that correct? 17 A. That is correct. But they also finally noted 17 A. This model has been developed for the Lower ACF 18 that this model is accurate for the purposes of 18 River Basin, but the Upper Floridan Aquifer --19 figuring out how much baseflow occurs in the 19 yes, it's for the Upper Floridan Aquifer. 20 20 basin. Q. And as you pointed out, it's for the lower 21 **Q.** Okay. Sir, can you please turn with me to tab 5. 21 portion of the basin where the Upper Floridan A. Yes. 22 22 Aquifer exists. 23 **Q.** Tab 5 is a document designated as FX-49r. Have 23 A. Yes. Q. And if you turn to page 2, I think it will show a 24 24 you seen this document previously, sir? 25 A. No, I have not. 25 map of exactly what you described. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3781 3783 **Q.** Okay. The portion of the document that I want to 1 Is that correct? 2 focus on is a March 29, 2013, e-mail from 2 A. Yes. That is the domain. 3 Mr. Woody Hicks. Do you know who Mr. Woody Hicks 3 Q. Okay. And do you know how much of the ACF River Basin falls outside the model domain, as you 1 4 5 A. I heard the name. 5 described it? 6 **Q.** Okay. Have you heard of the Jones Center? 6 A. A large portion falls outside as well, but most 7 A. Yes. 7 of the pumping occurs in the Upper Floridan **Q.** Okay. What does the Jones Center do? 8 8 Aquifer. Most the connectivity is in the Upper 9 A. I'm not sure what they do. I have heard the 9 Floridan Aquifer. So as far as the model is 10 10 concerned -- and that is what even Jones and name. 11 Q. And when you heard Mr. Hicks's name, is it in 11 Torak have done -- they have modeled the Upper 12 connection with the work on the ACF River Basin? 12 Floridan Aquifer to evaluate the impacts because 13 A. Yes. 13 that is most significant. Other impacts are not 14 **Q.** Okay. Can you please take a moment and review 14 significant. 15 the e-mail from Mr. Hicks. It's at FX-49r. 15 $\boldsymbol{Q}.\;\;$ And we'll certainly get to the significance of 16 A. Yes, I have read this. 16 those impacts as well as the impacts here, sir. 17 Q. Okay. And I understand that you haven't seen. 17 But my question for you is when you were 18 FX-49r previously, but had you previously heard 18 evaluating groundwater impacts on streamflow in 19 any criticisms of the 2006 Jones and Torak model? 19 areas outside the model domain, you did not use 20 A. No. 20 the 2006 Jones and Torak model? 21 21 Q. Okay. A. I did not model the areas outside of this domain 22 22 that we see here. I did evaluate what the impact A. It's the best available model to evaluate the 23 23 of pumping could be to the streams. And since impacts of pumping in the basin. And even Florida's experts agree with me on that. 24 that impact was so small, I -- and same with 24 25 Q. Okay. So you had never heard any scientist 25 Jones and Torak, they did not spend the effort of

5 of 101 sheets Page 3780 to 3783 of 4056

THE REPORTING GROUP

3784 3786 1 developing a model for that. less baseflow, less contribution to streams? 2 Q. Okay. And instead, you relied on work that 2 Α. That is correct. 3 others had done, including a consultant for Sir, can you please turn to tab 6. Georgia EPD called CDM; is that right? 4 Α. 5 A. For the areas outside of this model area, I Q. Do you recognize this document? 6 looked at the hydrogeology. I looked at the 6 Α. Yes. 7 transmissivities of those aquifers. They are 7 Q. This is designated as FX-934. And this was part 8 significantly smaller than the transmissivity of 8 of the materials that you provided to Florida 9 the Upper Floridan Aquifer. And as I mention in 9 when you submitted your expert report in this 10 my direct testimony, it's 25 to thousandths times 10 case; is that correct? 11 higher, the Upper Floridan Aquifer 11 Α. This was part of my discovery material, yes. 12 transmissivity. And for the connectivity is so 12 **Q.** And the spreadsheet reflects outputs from the 13 much higher. 13 model runs that you had performed? 14 So when you look at these things, you can see 14 A. The spreadsheet reflects the baseflows that the 15 that the impact of pumping in this upper region 15 model provided. 16 16 of the basin was negligible. As you pointed out **Q.** Okay. And it provides baseflows in three 17 in my direct testimony, we saw that it was around 17 different months -- 1992, 2011, and 2013, normal 18 12 to 20 cfs. 18 conditions, and dry condition. Is that right? 19 Q. Okay. I believe you said 21 cfs in your direct 19 It provides baseflow for four different year --20 20 well, for three different years, 1992, 2011, and testimony. 21 21 A. I believe it was 21 cfs then, yes. 2013. And it also provides baseflow values for 22 22 Q. But my question, sir, was in order to look at no irrigation pumping at all and also the Georgia 23 23 these areas outside the model domain, one of the EPD 2011 simulation that they had conducted. 24 24 **Q.** Okay. And my question was for each of the years things you relied on was a study by Camp, Dresser 25 25 & McKee, CDM; is that correct? that you ran, 1992, 2011, and 2013, you compared THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3785 3787 1 A. I also looked at the report by CDM. 1 a dry scenario, a drought scenario with a normal 2 2 **Q.** I want to focus now on the model itself, the scenario; is that fair? 3 Jones and Torak model, and some of the outputs 3 Α. No. That is not right. What I did here -- this 4 from that model. One of the things that you is an intermediate step. And from this I 5 5 calculated the baseflow reductions. And that is evaluated is the impacts in dry years versus the 6 impacts in what you call normal years; is that 6 what I compared. 7 7 Q. Okay. But I want to focus on -correct? A. I did not compare the baseflow values themselves. 8 A. Yes. 8 9 **Q.** And when you say a dry year, is that synonymous 9 Q. I understand that, sir. But I want to focus on 10 with a drought year? Are you talking about the 10 this particular document on this intermediate 11 11 same thing? step before we get to the other step. 12 A. Yes. 12 In this intermediate step, this document 13 ${\bf Q.}\,\,$ Okay. And when we think about baseflow, the 13 depicts the normal year and drought year 14 amount that groundwater is contributing to the 14 conditions as produced by the model that you ran; 15 15 stream in a dry year, is that lower than it would is that correct? 16 be in a normal year? 16 Yes. This document -- this shows me the baseflow 17 A. Yes. That is correct. In a dry year, you have 17 values that came out of the model that I ran --18 less rainfall, so your water -- groundwater 18 the models that I ran. 19 levels are lower; and, therefore, you're going to 19 **Q.** And for a drought versus normal year condition? 20 have less groundwater flow to streams. In a wet 20 For drought year conditions and normal year 21 21 year the groundwater levels themselves are conditions. I don't know what you mean by 22 22 higher; and, therefore, you have more of that versus. 23 23 groundwater flow to streams. Q. I -- if I used versus, I apologize. I didn't 24 24 **Q.** I see. So when you have lower groundwater mean to. 25 25 A. I wasn't comparing drought and normal years here. because of a drought, for example, you will have THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3790 1 I was comparing drought years to drought years of 1 will have on baseflow will vary. You said so 2 2 pumping/without pumping, and normal years to 3 normal years. So that's what I wanted to 3 Α. Yes. Q. 4 clarify. Can you please turn to tab 7, sir. 5 Q. Understood. But if you look at each of those Α. 6 years, '92, 2011, and 2013, and you look at the 6 Q. This is a document designated as Joint 7 months March through August, you have higher 7 Exhibit 71. Have you seen this document before? 8 8 A. Yes. baseflow in the dry conditions versus the 9 baseflow in normal conditions. The number for 9 Q. Okay. And the document is a publication by L. 10 baseflow in a dry year is higher than the number 10 Elliott Jones. Is that the Mr. Jones from the 11 for baseflow in a normal year; is that correct? 11 Jones and Torak model? 12 A. Yes. 12 A. I believe so. 13 **Q.** And that result is true for all three years, the 13 Q. Okay. I want to focus on page 3 at the map on 14 '92, 2011, and 2013? 14 JX-71. 15 A. Yes. It is consistent. I have always used the 15 Α. Yes. 16 same hydrology for what I termed as the drought 16 Q. Okay. Can you tell us what this map shows? 17 years, and I have used the same hydrology for 17 Yes. This is the location-dependent impact 18 18 what I have termed as the normal years. factor. So essentially what this shows is that 19 **Q.** And that's consistent with what you have done. 19 if at any point in this map, if you are pumping, 20 20 But I think you described that baseflow in a then the color indicates what that impact would 21 21 drought year you would expect to be lower than be of pumping from that location on the streams. 22 22 baseflow in a normal year? So when you see the color is red, it's closer 23 A. Yes. 23 to the streams; and the impact is larger. And Q. Sir, I would like to now talk about impact when the color is blue, that is further away from 24 24 25 factors. And that -- that's another output from 25 the streams; and the impact is less. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3789 3791 1 the model? 1 Q. And the areas where there's dark red, the impact 2 2 A. We can compute an impact factor from the model, factor would be close to -- or somewhere between 3 3 90 to 100 percent? Q. Okay. And you explained earlier today, in fact, A. That's what is shown on this map. 4 4 5 5 Q. Okay. And how would you describe the 90 to 100 as well as in your direct testimony that impact 6 6 percent? What does that number represent? factors vary depending on a variety of factors, 7 7 including the distance of an irrigation well from A. That is the percentage of pumping which is the stream? 8 8 captured from the baseflow. So that would be the 9 A. Let me clarify first. There are several 9 reduction of the baseflow to streams as a result 10 10 different types of impact factors. The of pumping. And that value is the percentage of 11 11 basin-wide impact factor for an annual average that pumping value. 12 12 Q. condition is what I was talking about Okay. And the little red dots throughout the 13 13 specifically. I believe that's what you are map, what do those represent? 14 referring to. And for that, that is the impact 14 A. Irrigated acres by node in the model. 15 of pumping divided by the absolute pumping value 15 So you understand that to be the location of the Q. 16 throughout the basin. 16 irrigation that's done in the model domain? 17 So in that sense, if you have pumping close 17 A. I believe so. 18 to the streams, your impact is going to be 18 Q. Okay. You have reproduced this particular 19 larger. If your pumping is further away from the 19 graphic in your expert testimony; don't you? 20 streams, your impact is going to be smaller. 20 I believe so. 21 **Q.** Yes. And we'll certainly talk about the annual 21 **Q.** All right. So you are familiar with it? 22 22 average impact factor. But what I'm focused on Α. Yes. 23 23 now is the fact that impact factors will vary all **Q.** Okay. Sir, would you agree that as depicted in 24 throughout the basin depending on where you're 24 the map we're looking at, the impact factors will 25 pumping from, the relative impact that pumping 25 vary anywhere from, you know, .1 all the way to THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A. Q. A. Q.	Yes. Okay. So you do recall using those words? Yes. And, again, that's exactly what I was saying. They have abandoned the 40 percent number, and now they're using a 60 percent number. That's what I was saying. Yes. And that's exactly what I would like to explore next, sir. The 40 percent number, the 38 to 40 percent that you ascribed to Florida's expert, Dr. David Langseth, it's not in his expert report. Correct? He has the 40 percent number in his expert report the. The 38 percent number or around 38 percent is what I had obtained through all my model simulations. And the 40 percent number that you're associating with Dr. Langseth, he actually says that that's the number that Jones and Torak had derived in their 2006 model. He doesn't adopt it; does he? Dr. Langseth never ran any groundwater model. He used the report of the Jones and Torak model	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A. Q. A. Q.	page 54 is a section entitled Conservation measure scenario, 50 percent reduction in agricultural withdrawals in the Georgia portion of the ACF Basin. Do you see that? I don't see that. Okay. That's my fault because I should have referred you to the prior page for the heading. The heading appears on page 53, section 5.2 titled Conservation measure scenario, 50 percent reduction in agricultural withdrawals in the Georgia portion of the ACF River Basin. Yes. And then on page 54, the paragraph right before the table, perhaps you could read that to yourself, sir. Yes. I read that. Okay. And you will see that he lists an average annual impact factor for the cells that he's selected in his conservation scenario of .56; isn't that right? This is the impact factor the impact factor that he selected for his conservation scenario.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	A. Q. A. Q.	Yes. Okay. So you do recall using those words? Yes. And, again, that's exactly what I was saying. 		TRIAL - Novembe	729, 2	010(1	/ol. XV) Florida v. Georgia
		3796	1		3798
1		SS7.	1		higher? Did anyone ever tell you that?
2		I think SS stands for summary statement, so	2	A.	I see that in his direct testimony; but I and
3		it should be in the front.	3		in Dr. Hornberger's direct testimony as well.
4	A.	Thank you.	4		But that's all I know about that.
5	Q.	And I want to focus on a paragraph where	5	Q.	And did you ever follow up to see if he said that
6		Dr. Langseth discusses the Jones and Torak model.	6		at his deposition?
7		And it's a paragraph that begins, for my	7	Α.	No, I did not. I don't have his deposition.
8		evaluation.	8	_	All right. So before you wrote down Florida has
9	Δ.	Yes.	9		abandoned this opinion, you didn't go back and
10	_	And my question is really you understand that	10		check to see if they ever talked about it at
11	Œ.	Dr. Langseth had characterized the Jones and	11		their depositions?
12		Torak model as conservative?	12	۸	In the direct testimony and in Dr. Hornberger's
	٨		13	Α.	-
13	_	That's what he says, yes.			direct testimony, they start using 60 percent
14	Q.	Right. And you understood that that was his	14		instead of 40 percent. So that's why I say that
15		position when you prepared your direct testimony?	15		they have abandoned the 40 percent because
16	Α.	I have referenced each of his concerns about the	16		this all the expert reports used 40 percent;
17	_	model in my expert report.	17		and when the direct testimonies come, they all
18	Q.	Okay. And my question, again, was you understood	18		started using 60 percent.
19		that he was characterizing it as a conservative	19	Q.	But you understand that the depositions occurred
20		model and that he further characterized it at the	20		before the direct testimony was submitted?
21		bottom of this paragraph I just directed you to	21	A.	Yes.
22		as a model that was designed to produce biased,	22	Q.	And did you ever review all of Dr. Langseth's
23		low results. Did you understand that?	23		deposition?
24	A.	Yes. I know that that's his position. And I	24	A.	No, I did not.
25		have refuted his position in my expert report.	25	Q.	I want to stay on this topic of abandonment. I

3802 1 A. No. A. The last sentence is the entire hydrologic 2 2 Q. The document designated as FX-594 was authored by system, therefore, needs to be quantified to 3 3 examine the effects of the various water uses A. Yes. upon each other and upon discharge to streams Q. And it's dated June 1998. Did you prepare it in 5 that flow into Apalachicola Bay. It's -- it or around that time? 6 really does not describe the work we did. A. Yes. Yes. 7 The work we did was run the model for 8 Q. Can I ask you to review the last two sentences of 8 sensitivity simulations and run the model for 9 the first paragraph on page 1. 9 transient simulations. So that is the work we 10 You're certainly free to read the entire 10 11 paragraph, but my questions are going to focus on 11 Q. And, actually, I meant to direct you to the last 12 that. 12 sentence on the bottom of the page. And that 13 It's the first page of FX-594. 13 describes the work. So I apologize for that. 14 A. Yes. 14 A. That is correct. 15 Q. Okay. 15 Q. Okay. A. The last two sentences actually talk about the 16 A. I have read the last two sentences, too. 16 17 **Q.** At the time you wrote these two sentences that 17 work that was done here. Okay. The current 18 there exists a high degree of hydrologic 18 study expands on these previous modeling efforts 19 interaction between the aquifers and the streams 19 by examining a cyclic transient behavior of the 20 and floodplains and estuaries of the basin, did 20 system for monthly varying current and estimated 21 21 you believe it to be true? future pumping rates. 22 22 A. Yes. And then it says the focus of this work is to 23 **Q.** And do you believe it to be true today? 23 quantify the net groundwater discharge and its fluctuations to streams and rivers that discharge 24 24 A. Yes. 25 **Q.** And the focus of the work you were doing was to 25 into the Apalachicola Bay. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3801 3803 1 quantify the net groundwater discharge and the 1 Q. Okay. Thank you, sir. 2 2 fluctuations in the streams and rivers that Can we now turn to the conclusions of this 3 discharge in Apalachicola Bay? 3 work on page 25. A. Yes. 4 A. I believe this work was to build upon an earlier 4 5 model by Torak and McDowell, which was just a 5 Q. And the conclusions actually run onto page 26, 6 steady state model. And we evaluated 6 but I'm interested in the two paragraphs on 25. 7 sensitivities to certain parameters in this 7 So if you might read those to yourself. 8 Α. project, and we converted the model from a steady 8 Yes. 9 state model to a transient model. So we looked 9 **Q.** I'll have a couple of follow-up questions after 10 10 at the behavior of the system for transient you finish. 11 Yes. I have read that. cyclic conditions. 11 Α. 12 Q. Okay. My question was just really designed to go 12 **Q.** Okay. There's a reference in the first paragraph 13 13 at the last sentence on the page to see if the to the Newton, Bainbridge, and Woodruff reaches. 14 whole work was intended to quantify the impact 14 Α. Yes. 15 that the groundwater fluctuations would have on 15 **Q.** What does that represent? 16 the river and the bay. Is that why you did this 16 Those are reaches on the Flint River. 17 17 Q. Okay. And when you wrote the Newton, Bainbridge, work? 18 A. Can you repeat your question, please. 18 and Woodruff reaches are the most affected by 19 19 pumping, did you believe that was a true 20 A. I did not quite follow you. 20 statement at the time? 21 21 **Q.** The last sentence on the first page --Α. Yes. 22 22 Q. And when you wrote that the effects of the A. Yes? 23 Q. -- did that accurately describe the work you were 23 individual reaches result in a cumulative effect 24 doing for the Northwest Florida Water Management 24 in flow reduction of the Apalachicola River, did 25 25 you believe that was a true statement at the THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

TRIAL - November 29, 2016 (Vol. XV) Florida v. Georgia 3804 3806 1 time? A. We're looking at the Upper Floridan Aquifer; that 2 2 A. Yes. 3 Q. And in the conclusion section, you write that the 3 Q. And you then compare that to what are the observed flows at the Chattahoochee Gage; is that total reduction in streamflow is approximately 60 5 percent of total groundwater pumped during one 5 6 annual cycle. Do you see that? 6 A. That's what this figure compares, yes. 7 A. Yes. 7 Okay. So you're comparing modeled results to 8 Q. Okay. And did you believe that was a true 8 observed flows; is that right? 9 statement at the time? 9 A. That is correct. 10 A. Yes. We used that on the model at the time. And 10 Q. Okay. But you're just looking at groundwater; 11 at that time we did not have very good estimates 11 isn't that right? 12 of agricultural irrigation in the area. And for 12 A. This impact is just from groundwater, what we see 13 that model, we did get the 60 percent number. 13 in this figure, yes. 14 And that model has been updated by the 14 Q. Okay. And do you know what the total Georgia 15 Georgia EPD, by the USGS. They have looked at 15 withdrawals -- I'm sorry, the total Georgia 16 16 irrigation. They have tried to be a lot more estimated reductions to streamflow were in July 17 accurate with their irrigation estimates. And 17 of 2011? 18 18 A. I have provided an estimate of the net -- I can there is a new model now. 19 Q. Okay. And in this report, do you advise the 19 point you to it; it's in my direct testimony --20 20 Northwest Florida Water Management District that of the net impact of all of Georgia's pumping on 21 21 the information you're presenting them might be baseflow in the basin, yes. 22 22 inaccurate? Q. I'm actually not asking about just groundwater 23 A. We have -- at that time we used the best 23 pumping. I'm asking about everything. 24 information that was available. 24 Α. Right. 25 Q. I understand. 25 Q. Groundwater pumping, plus surface water THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3805 3807 1 I want to move on to a different topic now, 1 irrigation, municipal and industrial use. Do you 2 2 sir; and that is your opinion that the ever compare that to the flows at the 3 3 groundwater pumping in the Lower ACF Basin has Chattahoochee Gage? 4 A. I have not compared the municipal and industrial. a minimal impact on streamflow at the 4 5 Florida-Georgia line. 5 I have not included the municipal and industrial 6 A. Yes. 6 pumping from surface waters. I have included 7 Q. Okay. And you testified that that relationship 7 agricultural pumping in the basin. I have 8 holds even in drought conditions and peak 8 included agricultural withdrawals from surface 9 irrigation in the Lower ACF Basin; is that right? 9 waters also in the basin. A. Yes. 10 10 Q. Do you know what the total number that Georgia 11 11 **Q.** If you turn to page 27 of your direct testimony, estimates -- Georgia EPD estimates that it 12 12 reduced streamflow by in 2011? Do you know what you have a graph that looks at groundwater 13 13 pumping in the Upper Floridan Aquifer and that number is? 14 compares it to streamflow at the Chattahoochee 14 Α. No, I don't. My number that I have for all of 15 15 agricultural irrigation pumping in the basin is Gage. 16 I'll give you a moment to get there. 16 less than a thousand cfs. 17 A. Yes. Yes. 17 But you agree, sir, that groundwater, surface 18 **Q.** And for this figure, you estimate that the total 18 water, it all has a cumulative impact on flows 19 streamflow reductions, because of groundwater 19 that Florida receives? 20 20 pumping in July 2011, amount to about 511 cfs? Every impact is added up; so you have a 21 21 A. The total pumping in the Upper Floridan Aguifer cumulative impact, yes. 22 22 in Georgia provided a baseflow reduction --Q. Okay. And if you want to figure out what that 23 23 maximum baseflow reduction of 511 cfs, yes. cumulative impact is, we can go to -- as 24 Q. And, again, we're just looking at the model 24 estimated by Georgia, we can go to Dr. Zeng's 25 domain; we're not looking at the entire basin? 25 testimony. And that's behind tab 10 of your THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3808 3810 1 binder. A. Yes. 2 2 In particular, I'll direct you to a figure Q. Take a moment to look at those names. Do you 3 that's on page 7 of his testimony. 3 recognize any of those people? 4 A. Yes. 4 A. I know some of the names. I know the name of --5 Q. Okay. And you will see that in July 2011, the I have seen the name Dr. Golladay. I have seen 6 total consumptive use as estimated by Georgia is 6 the name Woody Hicks, Mark Masters. And that's 7 roughly 1800. Do you see that? 7 8 A. Yes. 8 Q. Okay. We just talked about Mr. Woody Hicks 9 **Q.** And if you compare that to the state line flows 9 earlier today. Did you talk to any of these 10 during that month, do you know what the impact 10 people in connection with doing your work here, 11 is? 1800 divided by 5,000? 11 12 A. I can do the math. 12 Α. No, I have not. But I have spoken a little bit 13 Q. Okay. 36 percent, right? 13 with Mark Masters because I have run into him 14 A. I'm not sure. I don't have a calculator with me. 14 during the course of this work. 15 **Q.** Okay. Sir, I'm ready to move to another topic. 15 Q. Okay. I want to look at particular statements in 16 16 And for this, I think we're going to rely this plan and ask you if they're consistent with 17 principally on the second binder; but we may come 17 the conclusions that you have reached in this 18 18 back to the first one, because that's got your matter. 19 prefiled direct in it. So just keep it handy. 19 We can start by looking at page 15 of JX-21. 20 20 The focus of these questions is going to be And there's a paragraph that begins, water use in 21 21 the Flint River Basin. And if you might read whether you evaluated Georgia EPD documents when 22 22 you rendered your opinion that groundwater that paragraph to yourself. 23 withdrawals only have a minimal insignificant 23 A. Yes. I have read it. Q. Okay. Sir, do you agree that groundwater 24 impact. Did you ever compare that against 24 25 documents that Georgia EPD itself had published 25 withdrawals can reduce streamflow and, therefore, THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3809 3811 1 on this topic? That's going to be the focus of 1 degrade aquatic habitats? 2 this line of questioning. 2 A. Yes. Groundwater withdrawals can reduce 3 3 Did you review the Flint River Basin Regional streamflow, and locally there could be habitats 4 Water Development and Conservation Plan, that could be affected by that. 5 sometimes called the Flint River plan, from 2006 5 Q. Okay. And we're certainly going to address that 6 6 issue, whether the impacts are local or more in your work? 7 A. I have looked at documents which talk about state 7 regional; but you do agree with the statement? A. 8 water planning. I'm not -- if you can point me 8 Yes. 9 to the exact document, I'll tell you if I have 9 Q. Now, can you please turn with me to page 21; and 10 10 reviewed that one. we'll review a series of technical findings. 11 **Q.** Certainly. And that's going to be the document 11 Α. Yes. 12 behind tab 11. This is JX-21. It's dated 12 **Q.** And we're going to focus on technical finding 2 13 March 20, 2006, and entitled Flint River Basin 13 and 3 in particular. 14 Regional Water Development and Conservation Plan. 14 Α. 15 Now, do you recall reviewing this in the 15 Q. Have you had a chance to look at 2 and 3? 16 course of your study, sir? 16 I will read them now. 17 A. I believe I saw this yesterday or day before 17 Q. Okay. Thank you. 18 yesterday. And I was trying to recall if I had 18 Α. Yes. I have read that. 19 seen it earlier. 19 Q. Okay. Is technical finding 2 consistent with the 20 There are some figures in there which are 20 conclusions that you reached in this matter, sir? 21 similar to what I have seen before. 21 A. I do not know the full context of this document. 22 22 Q. Okay. If you might turn to pages 19 and 20, you But I can confirm that in some sub-basins, the 23 will see a list of Stakeholder Advisory Committee 23 impact of pumping to streamflow can be large; and 24 members and Technical Advisory Committee members. in some sub-basins, there is barely an impact. 24 25 This is 19 and 20. 25 And that's pretty much what I take from this THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3812 3814 1 technical finding 2. 1 larger impacts; some watersheds could have less 2 2 Q. Okay. The same question with respect to impacts. I agree with technical finding 3 3 technical finding 3, is that consistent with the 3 inasmuch that if you are pumping groundwater, it 4 conclusions you reached in this matter? will impact streams. And that if you are in 5 A. Again, over here I don't know the context of the drought conditions, the baseflow is going to be 6 entire document. But he says that the data he 6 even less. 7 has provides evidence that agricultural 7 Sir, did you evaluate the impact of agricultural 8 irrigation compounded the effect of climatic 8 irrigation on blue hole springs in Georgia? 9 drought on streamflow. So essentially he is 9 No, I did not. 10 saying that both the drought and pumping can have 10 Q. All right. Do you know what blue hole springs 11 these impacts which -- and, again, he's talking 11 12 about local aquatic habitats. 12 A. I believe these are springs which get water from 13 **Q.** Okay. He writes -- the authors write that the 13 groundwater. 14 data provides the clearest evidence that 14 Q. That's right. And if you -- that's exactly 15 agricultural irrigation compounds the effect of 15 right. And if you turn to page 67 and 68 of 16 16 drought on streamflow. Isn't that right? JX-21, there is some discussion of this topic. 17 17 A. That's what he says here. Do you recall reviewing this in the course of 18 18 **Q.** All right. And he goes on to say that that your work here, sir? 19 effect is more pronounced during drought. Do you 19 I don't know if I read this very document. But I 20 20 recall that Florida had brought up blue hole agree with that? 21 21 A. Yes. There will be less baseflow during springs, so I had looked at that as well. 22 22 droughts. I agree with that. **Q.** And is that discussed in your direct testimony? 23 **Q.** Okay. And do you agree that irrigation compounds 23 A. I'm not sure I have referred to blue hole springs 24 the impacts of drought on groundwater discharge 24 in my direct testimony. I have looked at the 25 25 into streams? local impacts that Florida has discussed. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3813 3815 A. Pumping of groundwater will reduce the flow of 1 Q. The -- the particular blue hole spring that's 2 groundwater to streams. But how much, the 2 referred to here is -- referred to here is Radium 3 3 quantity, is what I have evaluated in my Springs. Have you heard of Radium Springs 4 evaluation. before? 5 5 A. Yes, I have. And he -- he's -- this is a general 6 6 statement. And it does. I agree. If you pump **Q.** And you know it's the largest natural spring in 7 7 groundwater, you're going to affect streams. Georgia? 8 Q. Do you -- do you know who put this together, this 8 A. I don't know about that. 9 9 Q. You were unaware of that? particular document? 10 10 A. No, I don't. No, I don't know if that's the largest spring in 11 11 **Q.** Well, if you look on the cover page, that might Georgia, no. Q. 12 12 give you --Okay. It says here on page 67 that the flow in 13 13 A. Yes. Radium Springs has been measured at 49,000 14 Q. -- some insights. 14 gallons per minute. Do you see that? 15 15 Α. Yes. A. I was just going there. 16 Yes. It says it was produced by Georgia 16 Q. And, sir, were you aware that Georgia EPD says 17 **Department of Natural Resources Environmental** 17 that Radium Springs went dry for the first time 18 18 Protection Division. Carol Couch, director; in recorded history because of drought and 19 Robin J. McDowell, plan coordinator. 19 increased withdrawals? 20 20 Q. Okay. And we'll look at their quantification of I have done a little analysis of Radium Springs. 21 21 amounts in other documents. But the technical I looked at the flows in Radium Springs and 22 22 findings 2 and 3 are consistent with the minimum flows during droughts in past years, 23 23 conclusions you reached in this matter? earlier years. And I don't recall the exact 24 A. I agree with what he says in technical finding 2 numbers, but they were small. They were, I 24 25 that when you pump, some watersheds could have 25 believe, less than 10 cfs, if I recall. And if THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

TRIAL - November 29, 2016 (Vol. XV) Florida v. Georgia 3818 1 that became dry, so your -- the difference is 10 Q. It's a low flow metric, sir. 2 cfs. And I don't think that has much of an 2 That's what you represent to me, but I don't 3 impact flow into Florida. 3 understand what the metric does. **Q.** The metric represents the lowest seven-day 4 **Q.** Okay. So the answer to my question is, yes, you 4 were aware that it went dry? average over a 10-year period. 6 A. I have reviewed the data, yes. And it had gone 6 Go down to the column that talks about -- the 7 dry recently. But the flows were very low in 7 row that talks about current model. This is 8 previous droughts as well. 8 referring to the current level of agricultural 9 Q. And according to JX-21, the flow was measured at 9 irrigation as of 2006. And Georgia EPD is 10 49,000 gallons per minute. That's approximately 10 evaluating the impact it has on streamflows in 11 70.6 million gallons a day? 11 the Flint River at these three locations. And 12 A. I see that. I don't know the context of that. I 12 under the current 2006 conditions, the level of 13 don't know whether this is an annual average. I 13 agricultural irrigation reduces the streamflow 14 don't know which year this was in. 14 7Q10 value from 140 to 20. Do you see that? 15 15 Q. Okay. Sir, do you know what a 7Q10 value is? That's what this table says. Yes, I see what it 16 A. I have heard of that, but I don't -- I'm not too 16 says here. 17 sure what it is. 17 Q. And at Flint River Bainbridge it goes from 2500 18 Q. Okay. Did you associate it with being a low flow 18 to 1500. Do you see that? 19 metric? 19 This table says that the number 2500 for 20 20 A. I believe it's some sort of flow metric. I'm not pre-'70's data shows -- went down to 1500 for the 21 sure whether it's a low flow metric. 21 current model data. 22 22 Q. But as a groundwater hydrologist, you haven't Q. Okay. And the current model data was as of 2006; 23 23 come across that before? is that right? A. I don't use this often in my work, no. A. Where does it say that? Could you please point 24 24 25 Q. Can we please turn to page 134. 25 me to that? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3817 3819 1 A. Yes. 1 Q. It's the cover page. We just looked at it. 2 Right? 2 Q. Okay. I'm interested in the table at the top of 3 3 the page, this table 6.8. Do you recall That's when this report was issued. A. This document was written in March of 2006, so 4 reviewing that previously? 4 5 5 A. No, I haven't. I haven't seen this. I'm not sure. The model could have been another 6 Q. Okay. If you will follow along with me, you will 6 year model. 7 see that the table represents the streamflow at 7 Q. Okay. You never studied this table, sir, before 8 8 three different locations along the Flint River. rendering your opinions on groundwater 9 Ichawaynochaway Creek, do you know where that 9 withdrawals? 10 10 A. No. is? 11 11 A. Yes. This is not relevant to my case. I don't 12 Q. Okay. Flint River at Bainbridge, do you know 12 know what 7Q10 is. I don't know what that metric 13 13 where Bainbridge is? is. 14 A. Yes. 14 I have evaluated the net flow or the impact 15 Q. And Spring Creek near Iron City; do you know 15 of pumping within Georgia on the net flow in the 16 where that --16 basin into Florida -- to Lake Seminole, I would 17 A. Yes. 17 say. And --18 Q. Okay. And the first row talks about the 7Q10, 18 Q. And -- sorry. 19 the low flow measurement pre-1970's. And you 19 And that's what I evaluated. So I didn't need 20 20 will see that for Ichawaynochaway Creek, that's to -- and I don't know what 7Q10 metric is. 21 21 at 140 cfs. For Flint River at Bainbridge, Q. So was it important to you as part of your

22 that's at 2500. And at Spring Creek, it's 15. 23 Do you -- are you following me?

24 A. I see those numbers. I don't know what they 25 represent. I don't know what the 7Q10 is.

> THE REPORTING GROUP Mason & Lockhart

25 A. I have looked at Georgia EPD's work for overall THE REPORTING GROUP

Mason & Lockhart

analysis to see what Georgia EPD had determined

the impact of agricultural pumping would have

22

23

3822 1 impact of groundwater pumping in the basin. **Q.** And have you been working on this matter 2 2 There were a lot of documents that came my way continuously since that time? 3 which have little local impacts, and I did not 3 A. I have been working on this, yes. 4 look at those documents. 4 Q. Okay. Can we please turn to page 145, sir. 5 **Q.** Because you didn't think that they were material 5 And I would request that you read the 6 to your analysis? 6 paragraph at the bottom of the page that begins, 7 A. That is correct. They were not material to my 7 the most severe drought conditions. It continues 8 analysis because these are small and local 8 on through on page 147. 9 impacts. And I add them all up because finally 9 A. Yes. I have read that. 10 the objective is to add up, to look at the net 10 Q. Okay. Do you agree with Georgia EPD that 11 impact. So that is what I was done. 11 groundwater withdrawals significantly impact 12 **Q.** Okay. So a reduction of Flint River flow from 12 streamflow in drought years when irrigation is 13 2500 to 1500, a reduction of a thousand cfs is 13 intense and the aquifer has not recharged from 14 not material to your work? 14 the previous year? 15 A. I don't think it's the same as a reduction of a 15 Α. I do not know the context of this, but 16 16 thousand cfs. This is some metric which is a groundwater withdrawals will have some impact; 17 7Q10 metric. And I'm not sure what that is. And 17 and drought-related impacts are definitely there 18 18 you're representing to me that that is an actual in Spring Creek, yes. 19 reduction. It is some metric that is reproduced, 19 Q. Okay. But you're unable to say whether those 20 20 and that is what this table says. impacts are significant in the way that Georgia 21 21 **Q.** Okay. And that's what Georgia EPD prepared? EPD has characterized it? 22 22 A. The state -- this report was prepared by Georgia A. We have not quantified what is the impact of 23 23 drought versus what is the impact of pumping. EPD, yes. 24 24 Q. Okay. Let's go on to a discussion on what And that is what I have been focusing on. There 25 Georgia EPD determined with respect to the 25 is no evaluation or analysis saying this much THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3821 3823 1 Clayton Aquifer. And if you will turn with me to 1 percentage was the drought impact and this much 2 2 page 76, please. was the pumping impact. Q. 3 A. Yes. 3 Okay. If we can jump ahead to tab 22 -- it's the 4 **Q.** And the section I'm interested in is 5.1.2. It's 4 last tab in the binder -- the document designated 5 5 fairly lengthy, but the provisions that I'm as FX-82. Actually, a September 6, 2011, memo 6 interested in begin in the sixth line down. And 6 from Dr. Wei Zeng to Georgia EPD director Allen 7 7 it's a sentence that starts with, in the coastal Barnes. Have you seen this before, sir? 8 8 A. I'm not sure. I know of some of this plain the heavily used Clayton Aquifer. 9 A. Yes. 9 information, but I don't think I have seen this before. So --10 10 Q. Okay. Do you agree with Georgia EPD that the 11 11 Q. Clayton Aquifer is heavily used? Okay. Let's focus on the first page for a 12 12 A. That is a relative term, I guess. It may be moment, the section entitled Groundwater 13 13 heavily used. But the most-used aquifer is the Conditions. And in that section Dr. Zeng notes a 14 Upper Floridan Aquifer. 14 clear lack of recharge and replenishment of 15 Q. Do you agree with Georgia EPD that the Clayton 15 groundwater storage after the conclusion of the 16 Aguifer has experienced, quote, extreme head 16 2011 growing season. Do you see that? 17 declines? 17 Α. 18 A. I cannot know. 18 Q. Did your model results indicate a clear lack of 19 19 **Q.** Do you agree with Georgia EPD that groundwater recharge and replenishment to groundwater 20 withdrawals from the Clayton Aquifer, quote, 20 discharge storage in 2011? 21 21 caused adverse effects on other water users where A. That is not what I was modeling. My modeling was 22 22 the Clayton Aquifer is being used, end quote? focused on the impact of pumping. So I did not 23 23 A. I do not know what the context of this is. evaluate what recharge does to the system. I was **Q.** Okay. Sir, when were you engaged in this matter? 24 specifically looking at how much reduction in 24 A. I believe April of 2015. 25 baseflow occurs because of pumping within 25 THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

TRIAL - November 29, 2016 (Vol. XV) Florida v. Georgia 3824 3826 1 Georgia. 1 assessment? Q. 2 A. If you show me the document, I could recall. 2 So you didn't look at recharge after a winter 3 season when it's generally wet? Q. Certainly. And it's behind tab 12. A. I have looked at water level data. I have looked It's designated as JX-160. 5 at streamflow data. But I have not modeled 5 A. Yes, I believe I have seen this document before. 6 recharge or wet -- I have not modeled -- I have 6 Sir, you're aware that this March 2010 report 7 not modeled less recharge in 2011 or more 7 focused on the availability of groundwater in 8 recharge in other seasons, as you are asking me. 8 select priority aquifers? 9 **Q.** So when you conclude that a multi-year drought 9 A. I don't know the entire purpose of this document. 10 doesn't have any greater impact on streamflow, 10 But I have evaluated from this document the 11 you haven't modeled it; but you just looked at 11 safe -- the safe yield issues that Florida 12 data? 12 brought up. 13 A. I modeled the impact of pumping in a multi-year 13 **Q.** Dr. Panday, you said safe yield. Might you mean 14 drought. I have analyzed that. 14 the sustainable yield criteria? 15 So what I did is I looked at the impact of 15 That's what I meant. Sorry. The sustainable 16 16 pumping in the first year. I looked at what yield. 17 residue remains going into the following year. 17 **Q.** That's fine. The select aquifers that are 18 So, again, I have specifically looked at the 18 considered in JX-160 include three that are in 19 impact of pumping. I have separated that out 19 the Georgia portion of the ACF Basin, sir. And 20 20 from the impact of all these other factors. if you look at page S-2, it will list those. 21 Q. Including groundwater recharge? 21 A. Yes. I see it. 22 22 ${\bf Q.}\,\,$ And the three that lie within the Georgia portion A. Including groundwater recharge; that is correct. 23 Q. All right. Did your model lead you to conclude 23 of the basin that are considered here are the 24 that the lack of groundwater recovery in 2011 24 Upper Floridan Aquifer in the Dougherty Plain, 25 was, quote, stunning? 25 the Claiborne Aquifer in the Coastal Plain, and THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3825 3827 A. I did not model the 2011 conditions of the change 1 the Cretaceous Aquifer in the Coastal Plain; is 2 2 in the last -- in the two drought years. I only that right? 3 A. Those three aquifers do lie in the ACF River modeled the impact of pumping. And recharge 3 4 would have dropped, and that would have dropped Basin; that is correct. 4 5 the baseflow itself. But I did not model the 5 **Q.** Okay. And when you reviewed this document as 6 effect of recharge. I just isolated out the 6 part of your analysis, did you also review the 7 7 comments the U.S. Fish and Wildlife Service made impact of pumping, and that was small. 8 **Q.** So if there's a multi-year drought and recharge 8 to the State of Georgia about its groundwater 9 is small, you can't tell us how much that will 9 availability assessment? 10 10 reduce baseflow? A. If you point me to those comments, I would 11 11 A. I can tell you how much the pumping has reduced probably recollect. 12 12 Q. Certainly. It's behind tab 13. And the comments the baseflow. 13 **Q.** That's not my question. 13 are in the form of a letter that's the second 14 A. Right. But that's what I analyzed. 14 page of FX-320. 15 Q. So you can't tell us how much the absence of 15 No, I have not seen this. Α. 16 recharge will impact streamflow --16 Q. Okay. You're welcome to read the entire letter, 17 A. I have --17 sir. It's only three pages. 18 **Q.** -- is that right? 18 I'm going to direct you to the section on the 19 A. I have not modeled that. But I can certainly 19 groundwater availability assessment at the bottom 20 look at the streamflow information; and we can 20 of the second page and carrying over to the third 21 21 see that if there is lack of recharge, then page. I'll request that you review that section. 22 22 you're going get less streamflow. And we have SPECIAL MASTER LANCASTER: Counsel,

> THE REPORTING GROUP Mason & Lockhart

review EPD's March 2011 groundwater availability

Q. Okay. In the course of your work, sir, did you

seen that in the signature.

23

24

25

will be?

while he's reviewing that, do you have an

estimate of how much longer you think you

THE REPORTING GROUP

3828 3830 1 MR. QURESHI: Your Honor, I believe I 1 render that opinion, you refer to a specific 2 2 have about 40 minutes. report that was prepared by CDM; is that correct? 3 SPECIAL MASTER LANCASTER: Why don't we 3 Α. 4 take a recess. Q. If you can turn to tab 15, you will see that 5 MR. QURESHI: Certainly. Thank you. 5 document marked as JX-57. 6 (Time Noted: 10:28 a.m.) 6 A. Yes. Yes. 7 (Recess Called) 7 **Q.** So this is a document that was prepared by a 8 (Time Noted: 10:38 a.m.) 8 consultant on behalf of EPD that led you to 9 SPECIAL MASTER LANCASTER: I forgot to 9 conclude that violations of the sustainable yield 10 10 criteria only have a local impact; is that right? tell you that Devon has an L. L. Bean 11 catalog. You can look at that to see, if you 11 This document showed me that the impact was 12 want to. They're predicting that they're 12 local. If we look at figure 5, it shows the top 13 going to have 350,000 pair of boots for Cyber 13 line -- up at the top of the basin where the 14 Monday. So I think they didn't hear the 14 impact had occurred, the sustainable yield 15 weather report because it's going to be rain. 15 criteria were met. 16 But, anyway, if you want to look at it, 16 And I had the MODFE model, so I could 17 feel free. 17 actually go into the model and see what the 18 MR. QURESHI: Thank you, your Honor. 18 baseflow was for that stretch of the stream. I 19 BY MR. QURESHI: 19 could see what -- the base for unpumped 20 Q. Dr. Panday, do you -- going back to Exhibit 20 conditions and that 40 percent reduction is what 21 21 FX-320, do you agree with the U.S. Fish and the impact is supposed to be, which would 22 22 Wildlife Service's opinion that the groundwater violated. So that 40 percent was really 23 23 availability assessment was of minimal use? negligible. A. I do not know the context of this document. I 24 24 So I looked at this document as well as 25 believe the context of this document is local. 25 looked at the Jones and Torak model to determine THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3829 3831 1 And once you get into that local level, I don't 1 that the impact was negligible. 2 know what they're arguing there. 2 Q. And do you know if the consultants who prepared 3 3 **Q.** On page 2 of the letter, right in the section JX-57 relied on the Jones and Torak model in 4 that talks about groundwater availability performing their analysis? 5 5 assessment, U.S. Fish and Wildlife explains that A. I believe they did. 6 Q. Okay. And that's the same model you rely on? performing a groundwater assessment independent 6 7 7 of a surface water availability assessment is of A. That is correct. 8 limited utility. Do you agree with that? 8 **Q.** Okay. And you read the entirety of JX-57, sir? 9 A. You can always add the two impacts and see the 9 A. I may have at some stage. 10 10 net impact. So I don't agree that if you do them **Q.** Okay. Sir, if you look with me to page 4, and in 11 11 the paragraph under section 2.2 there is a separately and look at the net impact that it is 12 12 of limited utility. discussion about total withdrawals within the 13 Q. Okay. And you referenced earlier the local 13 modeled domain as 157 million gallons per day. 14 impacts. Are you referring to your conclusion 14 Is that right? 15 that violation of the sustainable yield criteria 15 A. That's what it says here, yes. 16 that Georgia EPD set itself only has local 16 Q. Okay. And so to understand what occurred here, 17 17 what the authors of this report did is they impacts? 18 A. They are exactly that. They are local impacts. 18 compared that 157 million gallons per day against 19 That's, in fact, what this document -- the 19 a sustainable yield criteria to see what the 20 earlier document you showed me presented. 20 impacts would be; is that right? 21 It showed the whole map. They were pumping 21 A. I'm not sure that is correct. I believe what 22 22 throughout the aquifer. And then they noted they did is that they had certain criteria. One 23 23 where that local impact occurred as a result of was the -- one was a 30-foot drawdown within the 24 pumping throughout the aquifer. That is correct. aguifer. The second was a 40 percent reduction 24 25 Q. Okay. And in your direct testimony when you 25 of streamflow. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

8

13

16

19

2

7

So what they did then was to pump in different sub-areas to figure out how those criteria could be met. So they kept increasing the pumping.

I don't clear how they did it, but finally they came up with a basin-wide pumping level. And they upped that until any of these reaches' sustainable yield criteria -- those two criteria we talked about -- were violated. And the criteria that got triggered was the 40 percent reduction in streamflow.

And there were two simulations they had done. For one of them, that occurred in Muckaloochee Creek, which is the top corner of the basin; and that was a negligible amount. And for the second simulation which they did which gave them the range, the violation occurred in Mosquito Creek which is, again, a small section. It's a small stream which flows into the Lake Seminole.

- **Q.** And as you describe in your direct testimony, the impacts at Muckaloochee -- Muckaloochee Creek are about 1.7 cfs and at Mosquito Creek it's about .7 cfs. And you say those are negligible local impacts; is that right?
- 25 A. That's correct.

THE REPORTING GROUP Mason & Lockhart

1 that after their modeling was complete, Georgia

2 EPD received information noting that 157 is not

3 the right number; the actual withdrawals are

somewhere in the range of 450 to 590 million

gallons per day. Isn't that what it says?

- 6 A. That's what it says here, yes.
- 7 Okay. And, in fact, that range is what's
 - used by the regional council for the Lower
- 9 Flint-Ochlockonee water region; isn't that right?
- 10 A. I have no idea about that.
- 11 Q. You didn't look at this sustainable yield
- 12 criteria assessment that is in the Lower
 - Flint-Ochlockonee plan?
- 14 A. No, I don't know about Ochlockonee.
- 15 Q. Let's turn to that, sir. It's behind tab 14.
 - Have you ever seen this regional water plan
- 17 before?
- 18 A. You know, the front page looks familiar; but I
 - don't believe I have seen this before. A lot of
- 20 documents came across my desk. And, again, I
- 21 would have flipped through the documents and
- 22 determined that this is not for the entire basin;
- 23 and so I didn't look at it further.
- 24 Q. Okay. And the model domain that you relied on is
- 25 the Lower Flint region; isn't it?

THE REPORTING GROUP Mason & Lockhart

3833

Q. But you realize that the 157 million gallons per day number that CDM relies on was not the total

- 3 agricultural water withdrawals in this region.
- 4 You're aware of that?
- 5 A. CDM did not rely on this 157 million gallons per
- 6 day, I believe, in their modeling simulations.
- 8 criteria; and they stopped simulating pumping and

As I mentioned, what they did is they had their

- 9
- increasing the pumping. And then at a certain 10 level of pumping, they noticed certain criteria
- 11 were triggered. So that's what I believe they
- 12 did.

And then they compared it to the net pumping in the basin and say, oh, the net pumping in the basin was larger than what this model told us for that sustainable vield criteria. That's what I believe they did.

- 18 **Q.** Right. The net pumping was greater than 157
 - million gallons per day. If you looked at
- 20 page 16, sir, in the conclusions section, if you
- 21 take a moment to review that and review the
- 22 paragraph that begins during 2010, and read that 23 to yourself.
- 24 A. Yes. I read this paragraph.
- 25 Q. All right, sir. So you agree that CDM explains

THE REPORTING GROUP

Mason & Lockhart

- 1 A. It's the Upper Floridan Aquifer. It's the Lower
 - Flint as well as the Chattahoochee -- Lower
- 3 Chattahoochee River as -- which has parts of it
 - is in Alabama; and as well the model extends
- 5 slightly into Florida also.
- 6 **Q.** But -- okay. But your testimony is that you
 - didn't spend time reviewing FX-24 because it
- 8 didn't deal with the whole basin; is that what
- 9 vou said?
- 10 A. I guess so. I don't -- I -- this is just not
- 11 familiar to me.
- 12 Q. Okay. Sir, I direct you to page 3-7. There is a
- 13 section on groundwater availability. And the
- 14 section runs through 3-10. My questions are
- 15 really going to focus on the table that is on
- 16 page 3-9. And it's labeled table 3.3,
- 17 Groundwater results for assessed aquifers in
- 18 Lower Flint-Ochlockonee region, current
- 19 conditions. Do you see that?
- 20 Yes. I see that.
- 21 Q. Okay. Have you ever seen this table before?
- 22 Α. No, I don't believe so.
- 23 Q. Okay. This table compares the current
- 24 groundwater withdrawals against the sustainable
- 25 yield criteria that Georgia EPD set by itself.

THE REPORTING GROUP

Mason & Lockhart

3836 3838 1 And it does that for three different aquifers this table is between 237 and 328 mgd. And that 2 2 that are in the ACF Basin, the Claiborne Aquifer, is a case, as I explained to you, what they did 3 the South Central Georgia Upper Floridan, and the 3 is they took the model; and they kept ramping up 4 Upper Floridan Aquifer in the Dougherty Plain. pumping to see when any reach was -- violated 5 Are you with me? that 40 percent criterion. 6 A. Yes. 6 **Q.** So it's your testimony that the difference 7 Q. Okay. And you will see that the estimated 7 between the current groundwater withdrawals and 8 groundwater withdrawals from the Upper Floridan 8 the sustainable yield criteria, if we look at it 9 Aquifer range from 450 to 587 million gallons per 9 in cfs, it's roughly 122 -- I'm sorry, 188 to 540 10 day. Right? 10 cfs difference? 11 A. That's what it says here. 11 I haven't done the math. From this table, if 12 Q. All right. But the sustainable yield for 12 your math is correct, that's what it may be. 13 groundwater withdrawals in the Upper Floridan 13 But, again, as I mentioned, the sustainable 14 Aquifer in the Dougherty Plain is between 237 to 14 yield criteria is something local within Georgia. 15 328. Isn't that right? 15 And if you can add up that 1.7 with what happened 16 A. That's what it says here. And, again, the 16 at Mosquito Creek, it's still negligible compared 17 sustainable yield criteria was the 40 percent 17 to the flow into Florida. 18 18 reduction in any streamflow; and that was **Q.** If you rely on JX-57 that uses outdated 19 triggered with these numbers in small upper 19 agricultural withdrawal information? 20 20 reaches of the basin which had low flow itself. A. JX-57 never used agricultural withdrawal 21 21 So when that low flow of 1.7 cfs that you information in the model. Like I mentioned, in 22 22 the model what they did is they pumped, and they mentioned, for example, when 40 percent reduction 23 23 of that is an even smaller reduction. kept increasing the pumping until that criterion 24 Q. So you're referring to --24 was violated. Then what they did is they 25 25 A. So it's a local impact, and I did not evaluate compared that to what they believed was the THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3837 3839 1 this any further. 1 estimated groundwater withdrawal. 2 2 Q. You're referring to JX-57, the document we were So they never used that number in their 3 3 just looking at? calculations. That's comparing that to the 4 A. No. You mentioned the number 1.7 from my direct 4 number that they came up with in the modeling 5 5 testimony, which I looked -- took from scenarios. And that modeling scenario had, I 6 believe, these numbers on the right-hand side of 6 Muckaloochee Creek. 7 **Q.** And you derived that number by relying on JX-57; 7 the table, and those numbers violated the criteria which we discussed which were in the 8 isn't that right? 8 9 A. I derived that number by relying on the model. I 9 upper reaches of the basin in Muckaloochee Creek 10 looked -- I had the Jones and Torak model. I had 10 and in Mosquito Creek. 11 11 Q. a run without any pumping. So for that run And you realize that this is the Lower 12 12 without any pumping I could go to the streams and Flint-Ochlockonee Regional Plan; it has nothing 13 add up what baseflow is occurring to those 13 to do with the Upper Flint? 14 streams. And this document which you mentioned 14 A. This is the Lower Flint. And as you mentioned, 15 did show which reach was violated. So I went to 15 it's the Ochlockonee region as well. And so that 16 that reach and calculated what the flow was for 16 is, I believe, outside of the Flint River Basin 17 that reach. 17 also. 18 So I relied on the model as well as the 18 I don't know what analysis they have done for 19 document to show me where the reach was violated. 19 this. But it seems they are talking about 20 Q. But the document we were talking about, JX-57, 20 another basin here, the Ochlockonee --21 used a number of calculated withdrawals that was 21 Q. Okay. 22 much lower than the actual number that Georgia 22 Α. -- region. 23 23 EPD itself provided? Q. Was it material to your conclusions that Georgia 24 A. That is correct. The number that they have for 24 EPD determined that the groundwater withdrawals 25 the sustainable yield which they're showing me on 25 from the Upper Floridan Aquifer were between 188 THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

25	Q.	THE REPORTING GROUP Mason & Lockhart	23		THE REPORTING GROUP Mason & Lockhart

3844 3846 A. I'll read it. 1 Sumatra Gage is the gage just upstream of -- is 2 2 Yes. I have read that. the last gage upstream of the Apalachicola Bay. 3 Q. Okay. Do you agree with the conclusion that 3 So I looked at flow differences between those two 4 there's no climatologic indication that more gages. 5 recent droughts were more severe or persistent 5 Q. And over what time period did you conduct your 6 than those in the past? 6 analysis? 7 A. I do not know about that. I have looked at the 7 I looked at this, again, from 1975 through the 8 precipitation data from 1975 through 2015. I 8 current time period, the data that was available. 9 have looked at water level data from '75 through 9 Are you aware of any measurement errors 10 2015 and streamflow also for the same time 10 associated with either of those USGS gages? 11 period. And what I have found is that there are 11 Α. During my deposition it was brought up that there 12 more severe and multi-year droughts occurring 12 were possible errors in those gages. 13 after 2000. 2000-2001 was a severe, multi-year 13 Q. And prior to it being raised at your deposition, 14 drought. 2006-2007 was a severe, multi-year 14 were you aware of that fact? 15 drought. 2010-'11, going into '12 -- pushing a 15 Α. I don't remember the time lines, but I believe 16 16 little into '12 was a severe, multi-year drought. there was some memos following our expert report 17 And when we compare that to similar droughts from 17 which did talk about the Sumatra Gage and the 18 18 the 1975 period we don't see such multi-year, difference in flow between the Chattahoochee and 19 severe recurring droughts. 19 Sumatra Gages. 20 20 **Q.** So is the answer to my question, yes, you Q. Are you aware of a USGS letter from July 2016 21 21 disagree with the conclusion here? that highlights these anomalies in measurements 22 22 at the Sumatra Gage? A. No. The answer is I haven't studied climate 23 23 since the 1930's to now. That's what my answer Α. At my deposition I was shown two correspondences 24 24 from the USGS. The first one with an earlier is. 25 Q. 25 Okay. What about the conclusion that the primary date was from, I believe, a field person who does THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3845 3847 1 factor that's causing record low streamflows and 1 this work, the professional who does that work. 2 other alterations to the regional hydrology is 2 And that one indicated -- did not indicate that 3 3 water use? Do you disagree with that? there were any errors in there. 4 A. I do not know the context of this. He may be 4 And, again, I do not -- I wasn't sure of the 5 5 talking about some specific context where it correspondence from Florida to the USGS asking 6 whatever they were asking. So I don't know how might be critical to him. But as far as I'm 6 7 7 concerned, I don't believe that the impact to the that went. 8 entire basin is substantial compared to the flows 8 But then later on, I believe there was 9 9 that are going into Florida. another correspondence; and this came right from 10 Q. Did you know that Georgia EPD had funded this 10 the top. And, again, I don't -- I didn't see the 11 11 project in FX-49d1? correspondence from Florida to the USGS; but from 12 12 A. No. I don't know about this project. the USGS to Florida the correspondence did 13 13 **Q.** No one ever mentioned it to you during your work indicate that there were errors in the Sumatra 14 on the case? 14 Gage between, I believe, 1990 and 2002. So if I 15 A. No. 15 look at the period before 1990 and I can look at 16 Q. Let's talk now about your opinion that the 16 the period after 2002, then I believe the USGS 17 Sumatra and Chattahoochee Gage flows show an 17 had no problem with that. 18 increased loss of water over time. Do you recall 18 Q. Okay. Did you ever talk to the USGS about the 19 giving that opinion? 19 Sumatra Gage? 20 A. Yes. 20 Α. No, I did not. 21 **Q.** And in order to reach this conclusion, you looked 21 Other than looking at the letter that was shown 22 22 at flows at the Chattahoochee Gage as well as the to you at your deposition, what independent 23 23 USGS Sumatra Gage; is that right? investigation did you do on the accuracy of the 24 A. Right. The Chattahoochee Gage shows how much 24 Sumatra Gage? 25 flow is coming across the state line, and the 25 A. I did not. 11

13

- 1 Q. You just presented it in your direct testimony to2 this Court?
- 3 A. I'm -- there are professionals at the USGS who
- 4 create this data and put it on their website. I
- 5 am not a professional who looks at streamflow
- 6 gaging data and quality assurance, that and then
- 7 publish it. I'm not that professional. I'm a
- 8 groundwater modeler.
- ${f 9}$ ${f Q}$. Okay. So looking at stream gage is not part of
- your expertise; is that your testimony?
- 11 A. I do not go and look at stream gages; that is12 correct.
- 13 Q. But you --
- 14 A. I do pick up data from the USGS from stream gages
- 15 for precipitation, for water levels; and we use
- 16 that in our modeling analysis.
- 17 Q. Okay. And when is the last time you were on the18 USGS website?
- 19 A. Probably a couple of months ago.
- ${f 20}$ ${f Q}.$ Okay. Were you on there before you submitted
- 21 your direct testimony?
- 22 A. Let me clarify. I have been on the USGS website
- 23 for my other work. I don't believe I have been
- 24 on the USGS website specifically for this after
- 25 my direct testimony.

THE REPORTING GROUP

Mason & Lockhart

- 3849
- 1 Q. Okay. What about before your direct testimony;
- 2 did you go on there to get the Sumatra Gage
- **3** measurements?
- 4 A. We had got that at my -- during my expert report
- 5 time.
- **6 Q.** So you didn't go back and see if that data is
- 7 still live, is still available?
- 8 A. No, I didn't go back.
- 9 Q. All right. Did anyone tell you that -- other
- 10 than lawyers, that because you saw this letter
- 11 suggesting there may be measurement errors, you
- 12 ought to go back and check yourself to see if
- it's still there?
- 14 A. No. But I believe yesterday I heard that some of15 that data was removed in the USGS website.
- **16 Q.** Okay. Does that cause you to reconsider your
- opinion on the Sumatra Gage?
- 18 A. No, it does not. The letter from the director of
- 19 that section of the USGS indicated that the gages
- 20 were wrong between 1990 and 2002, I believe. So
- 21 I can look at data pre-1990 and post-2002, and I
- 22 come to the same conclusion.
- 23 Q. Okay. How do you know that?
- You haven't been on the website; right?
- 25 A. The letter from the USGS mentioned specifically

THE REPORTING GROUP

Mason & Lockhart

- 1 that the data errors possibly were between 1990
 - and 2002.
- **3 Q.** I'm not talking about the letter. I'm talking
- 4 about the website. You haven't been back on
 - there, and you presented this information to this
- 6 Court. Right?
- 7 A. I haven't been back on there. I was on there
 - previously for my expert testimony. And that's
- 9 where I originally got my data from. Yes.
- **10 Q.** Sir, in your testimony you point to a comparison
 - between the work that Dr. Sunding has done
- against work that Dr. David Langseth has done for
 - Florida. And you recognize that Dr. Sunding is
- 14 Florida's economic expert, and Dr. Langseth is
- 15 Florida's groundwater expert; is that right?
- 16 A. That's correct.
- 17 Q. Okay. And you explained that the peak summer
- 18 streamflow benefits that Dr. Sunding talks about
- in his conservation scenarios are not possible to
- 20 achieve. You make that assertion; is that right?
- 21 A. Yes. That's correct.
- ${f Q.}$ And you point to Dr. Langseth's work as the
- **23** support for this assertion?
- 24 A. I look at several things to support my assertion.
- **25 Q.** Did you look at Dr. Hornberger's testimony?

THE REPORTING GROUP

Mason & Lockhart

1 A. I have looked at portions of Dr. Hornberger's

testimony.

2

4

7

15

- **3 Q.** Do you realize that Dr. Langseth is the
 - groundwater expert for Florida?
- 5 A. Right. That is correct.
- **6 Q.** And Dr. Hornberger is the hydrologist expert for
 - both groundwater, surface water, and consumptive
- 8 use for Florida?
- 9 A. I believe Dr. Hornberger was the surface water
- 10 expert; that's what I was given to believe.
- 11 Q. Right. But you didn't compare Dr. Hornberger's12 analysis and assessments with Dr. Sunding's; did
- **13** you?
- 14 A. I'm not sure that doctor -- and I may be wrong,
 - that Dr. Hornberger had conservative scenarios in
- 16 his testimony. I believe Dr. Sunding had that.
- 17 And he relied, I believe, on Dr. Langseth's
- 18 groundwater impact factors to provide him with
- 19 the numbers that he could calculate his
- 20 scenarios.
- **21 Q.** And you recognize, sir, that Dr. Sunding has
- things in his conservation scenarios that aren't
- 23 mentioned in Dr. Langseth's analysis. Do you
- **24** appreciate that fact?
- 25 A. Dr. Langseth's direct testimony and expert report

THE REPORTING GROUP

Mason & Lockhart

3854 1 did not mention some of the scenarios which 1 factors have changed. 2 2 Dr. Sunding had in his report, yes. So even Dr. Langseth's analysis, he changes 3 Q. Okay. And you also realize that they're looking 3 the impact factors. He changes the spatial 4 at different things. Right? distribution, while I believe Dr. Sunding changes 5 A. I believe Dr. Langseth was looking at certain spatial as well as the temporal distribution of 6 conservation scenarios, and Dr. Sunding was 6 pumping, in time. 7 looking at some other conservation scenarios. 7 Because they're looking at different things. 8 Q. Right. And Dr. Sunding's conservation scenarios 8 9 involved a -- one of them at least involved a 9 A. I believe they're looking at different 10 2000 cfs conservation scenario using a peak 10 conservation scenarios. 11 summer month of 2011 drought. Do you recall 11 **Q.** And you compared them against one another? 12 looking at that? 12 A. I haven't compared them against one another. I 13 A. Yes. I recall that. And I disagree with his 13 have looked at each of them separately. 14 calculation itself because he, again, used impact 14 And when you talk about Dr. Sunding's 15 factors to do his calculations. And these are 15 scenario of 2000 cfs conservation, I specifically 16 the seasonal impact factors. And there are many 16 addressed that. When we talk about Dr. Langseth's 17 different impact factors. And the seasonal 17 scenarios, I specifically addressed those. 18 MR. QURESHI: Nothing further, your impact factors that were originally developed 18 19 were developed using the Jones and Torak model. 19 Honor. 20 20 Then he uses a different pumping from the Jones SPECIAL MASTER LANCASTER: Thank you. 21 21 and Torak model. So there's a discrepancy there. MS. ALLON: Your Honor, may I just hand 22 22 And then in the conservation scenario, he up two exhibits for the redirect examination? 23 23 REDIRECT EXAMINATION says you can eliminate pumping just within a 24 24 BY MS. ALLON: certain month or within a certain time period. 25 And if you eliminate that, then that also changes 25 Q. Dr. Panday, I want to just start by clearing up THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3853 3855 1 the impact factor. That changes the seasonal 1 one issue from the cross-examination. Do you 2 impact factor. 2 recall on your cross there was some discussion 3 So essentially you need to run a model if you 3 about whether Dr. Langseth, Florida's groundwater 4 want to see such specific impacts. 4 expert, had initially adopted a 40 percent impact 5 5 **Q.** In the comparison you did between Dr. Sunding and factor. Do you recall that? 6 Dr. Langseth, you're comparing two different 6 A. Yes. 7 7 Q. Okay. And Florida's counsel said during things. You're comparing a peak summer month in 8 the 2011 drought, which is what Dr. Sunding did 8 cross-examination that Dr. Langseth had never 9 9 adopted 40 percent as his impact factor. Do you for his conservation scenario, against what 10 10 recall that? Dr. Langseth evaluated, and that was a 11 11 representative drought year that consisted of six A. I believe he said that. Yes. 12 different years, not 2011. Did you appreciate 12 Q. And you had said that you had recalled some 13 13 that? deposition testimony from Dr. Langseth. And I A. Dr. Langseth's analysis for the net pumping 14 14 would like to turn to Dr. Langseth's deposition 15 15 during drought were for several drought years. transcript, which I have handed up. 16 However, when Dr. Langseth did his conservation 16 And I want to look specifically at page 356 17 scenarios, he did not look at that. He only 17 of Dr. Langseth's transcript. Are you there? 18 looked at how much he could reduce. And, again, 18 A. Yes. I'm there. 19 when he did that, he reduced things in a 19 Q. And do you see on line 14 I asked Dr. Langseth, 20 20 hydrologically efficient manner, as he calls it. so 40.6 is your annual impact factor for pumping 21 21 So he removed agricultural pumping from right just from the Upper Floridan Aguifer? 22 near the streams. And that is where your impact 22 And he answered, average annual impact 23 23 factor is largest. So when you remove that, then factor, transient impact factor for pumping just 24 24 that is not the model with which the impact for the Upper Floridan. 25 factors were developed. So now, the impact 25 Was that the deposition testimony that you THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3856 3858 1 were referring to when you testified that 1 saying in that paragraph about the hydrogeologic 2 2 Dr. Langseth had, in fact, adopted a 40 percent report that Florida is now relying on? 3 impact factor? 3 There's nothing to interpret, really. He said it 4 A. Yes. in clear words, I also screened out use of the 5 Q. Now, Florida's counsel also said during your 5 model developed by Hydrogeologic, Inc., 1998, 6 cross-examination that on his last day of 6 since it was based on the Torak and McDowell --7 deposition, Dr. Langseth had switched and adopted 7 it should have been 1996 -- and Torak and 8 a 60 percent impact factor. Do you recall that 8 McDowell 1996 models. 9 questioning? 9 And previous statement was, this 10 A. Yes. 10 consideration screened out the following models 11 **Q.** Let's take a look at some testimony from the last 11 developed by Torak and McDowell 1996. 12 day of Dr. Langseth's deposition. It's on page 12 So they have screened out that model, and 13 1079 of Dr. Langseth's transcript. 13 they have screened out the hydrogeologic model. 14 A. Yes. I'm there. 14 Q. So Dr. Langseth himself screened out use of the 15 Q. And do you see that on line 22 I asked, are you 15 hydrogeologic model; is that right? 16 16 A. That is correct. changing the opinion in your first report as to 17 the proper impact factor? 17 Q. Taking a step back for a minute, I want to ask a 18 18 And Dr. Langseth testified, I consider -- in very basic question which is what is groundwater? 19 the context of doing this work, I consider 40.8 19 Groundwater is water under the ground that exists 20 20 percent versus 40.6 percent to be essentially the in the voids or crevices between the soil or 21 21 rock. same thing. 22 22 And is this the testimony you were referring Q. And we also talked a lot about aquifers. What is 23 to when you said that Dr. Langseth had used a 40 23 an aquifer? 24 24 A. An aquifer is the soil or rock under the ground percent impact factor in his work? 25 A. I'm sorry. You said page 1078? 25 that contains and transmits groundwater. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3857 3859 **1 Q**. 1079. 1 Q. And what does groundwater have to do with the 2 A. And on line? issues in this case? 3 3 **Q.** Line 22 through line 4 of the next page. Groundwater feeds the rivers and streams in the ACF River Basin. And pumping of groundwater can 4 A. Essentially the same number, that is correct. 4 5 5 Q. Now, Florida's counsel also walked you through a impact that flow to the streams. And that is 6 6 1998 hydrogeologic study which they claim what I have done is to evaluate the impact of 7 7 supported a 60 percent impact factor. Do you that pumping on the groundwater flow to streams. 8 8 think using that study with respect to the Why is groundwater pumped in the ACF Basin? 9 analysis in this case is appropriate? 9 Α. Groundwater is pumped in the ACF Basin for 10 10 A. No, it is not. That study has been updated, and agricultural use as well as for municipal and 11 11 that study is outdated. industrial uses. Most of the groundwater use in 12 Q. Let's take a look at what Dr. Langseth had to say 12 the ACF River Basin is for agricultural use with 13 13 about the hydrogeologic reports. And if you turn very little use for municipal and industrial 14 to Dr. Langseth's report, which I handed out, and 14 purposes. And also at the same time, most of the 15 you look at page 37 of Dr. Langseth's expert 15 agricultural use is through groundwater with a 16 report. 16 less amount of water from surface water sources 17 A. Okay. 17 for agriculture. 18 Q. And I want to start the paragraph that starts, I 18 Q. You said that groundwater feeds the rivers and 19 19 also screened out. Do you see that? the streams. What are the factors that influence 20 20 A. Yes. how groundwater flows into rivers and streams in 21 21 the ACF Basin? **Q.** Okay. And can you just read that paragraph to 22 22 Α. yourself and let me know when you have had a The flow of groundwater to rivers and streams in 23 23 chance to do that. the ACF Basin is governed by multiple factors, A. Yes. I have read that. 24 including weather and pumping. When the weather 25 Q. With regards to pumping, pumping also affects the groundwater levels and the baseflow to streams; but there are many variables involved with that. And what I mean by that is if you're pumping close to the stream, the impact is going to be larger. If you are pumping away from the streams, the impact is going to be smaller.

The aquifer properties also determine how pumping would impact the baseflow, the flow of groundwater to streams. And, for instance, if the aquifer is more transmissive, then you have a higher impact factor. If the aquifer is -has -- the storage spaces are larger, if the storage capacity of the aquifer is larger, then you're going to have a larger time lag effect before that impact reaches the streams. You can be pumping in several locations, so there is the interaction of pumping between those several locations as well.

So you really need a groundwater model to be able to resolve all these interactions and to be able to then just isolate and separate the impact

THE REPORTING GROUP

Mason & Lockhart

1 report of Jones and Torak; and they extracted 2 impact factor, scaling factors from that. And 3 they used those scaling factors in their 4 analysis.

5 Q. Do you think that scaling approach is as reliable 6 as actually running the model?

No, it is not. When you are doing scaling, you 8 are relying on the pumping distribution that 9 was -- that was there in the model.

> First thing is you have to have a model to even develop those scaling factors. So they used the model that was run by Jones and Torak, the reported results. And they used those results to create the impact factor.

> Now, when you use those impact factors, as long as the pumping distribution doesn't change, you can scale things up and down. But Florida has not done that. They have changed the distribution of pumping. They have changed the timing of pumping. And if you're doing that, you need to run a groundwater model to accurately describe the impact.

23 Q. So when you actually ran the model yourself, how 24 did you use the model to quantify the impact of 25 groundwater pumping on streamflow?

> THE REPORTING GROUP Mason & Lockhart

3861

3863

of pumping from all these other impacts.

- 2 Q. And as a part of your analysis in this case, did 3 you conduct groundwater modeling to quantify the
- 4 impact of groundwater pumping on flow into the
- 5 streams and rivers in the ACF Basin?
- 6 A. That is exactly what I have done. My modeling 7 was to evaluate the impact of pumping on the 8 groundwater flow to streams.
- 9 $\boldsymbol{\mathsf{Q}}.$ And what groundwater model did you use for your 10 analysis?
- 11 A. I used the Jones and Torak 2006 MODFE model for 12 my analysis.
- 13 **Q.** Why did you decide to use that model?
- 14 A. Because that model, the Jones and Torak MODFE 15 model, was specifically designed to evaluate the 16 impact of pumping to baseflow in the Lower ACF 17 River Basin. And that is exactly what I did is 18 to evaluate the impact of pumping.

Also, as we saw here, Florida's experts also believe it's the best model available to do this impact calculation.

- 22 Q. Did Florida's experts also run the Jones and 23 Torak model?
- 24 A. Florida's experts did not run any groundwater 25 model. They used published results from the 2006

THE REPORTING GROUP

Mason & Lockhart

1 A. The first thing I did was to evaluate the

> 2 groundwater pumping that was going on in the

3 basin. So I evaluated agricultural irrigation

4 pumping as well as municipal and industrial

5 pumping. Once I had the pumping distributions

6 and timing, I implemented that into the MODFE

7 model; and I ran the MODFE model for that case.

8 I ran the MODFE model for the same hydrologic

9 situation, but without any pumping. When I take

10 the difference between those two, I get the 11 impact of pumping.

So that is how I used the MODFE model. 12

13 **Q.** And what were the different hydrologic

14 simulations that you had?

15 I had done hydrologic simulations for what I call Α. 16 normal conditions and what I call dry conditions. 17 So there were two different hydrologies. And I

18 used those to evaluate my pumping impacts.

19 Q. Now, on cross-examination, counsel for Florida

20 was asking why your dry hydrologic conditions

21 actually modeled more contribution to streamflow

22 than your normal scenario; and you had said it

23 doesn't matter. Why is that?

24 Right. It does not matter, because the impact of Α. 25 pumping to streamflow is not dependent on the

23

24

25

the monthly flows for every month, and that was plotted for every month. The monthly minimum flow, the minimum flow that month, was plotted for every year in the purple line.

When I look at that minimum flow, you can see that it really isn't a declining trend. You can see that, yes, the minimum flow goes lower during dry periods. And the dry periods I indicated with the red bars. But they are slightly higher in the wet periods or normal periods. The wet periods I indicated with the blue bars. And normal periods are the white, the blank bars.

I also plotted the maximum flow -- maximum monthly flow of every year in the blue line. And we can -- the difference between that minimum flow and the maximum flow is the variation of flow every year. And we can see that that variation of flow every year is in the tens of thousands of cfs.

Finally, on this chart I also show in the orange line the annual flow at the Chattahoochee Gage. And from this what I see is that the annual flows can be lower in dry year and higher during the wet years. And, again, when I look at the difference between a dry year flow and a wet

THE REPORTING GROUP

Mason & Lockhart

impact is 538 cfs of all pumping within the

And we can compare these two to the red line in the weather-related impacts, which is -- the minimal flow across the state line is 5,000 cfs, and we can compare that to the 500 cfs of maximum impact; or we can compare the annual average flow of 300 cfs with the annual average flow at the Chattahoochee Gage of 19,000 cfs. And that is also negligible.

Finally the middle two bars, which are the 60 cfs annual average baseflow reduction from 1992 conditions. So if Georgia were to curtail its pumping to 1992 conditions, the benefit would be 60 cfs average annual or 112 cfs monthly maximum baseflow.

And we can compare those again to the 5,000 number and to the average 19,000 number flow.

Finally, the last two bars on the chart indicate -- the second last bar indicates the average fluctuation within a year. So within a year the average fluctuation of flow at the gage is more than 36,000 cfs. And on the last bar we can see the fluctuation between a dry year and a wet year. And we can see that difference is

THE REPORTING GROUP

Mason & Lockhart

year flow, that difference is in the tens of thousands of cfs.

So I wanted to evaluate these are the impacts of climate, of -- I should say weather.

5 Q. And what --

2

3

4

- 6 A. Dry periods or wet periods.
- 7 **Q.** What did you conclude from this analysis about
- 8 the relative impacts of groundwater pumping and 9 weather?
- 10 A. Right. The relative impacts of groundwater 11 pumping are negligible compared to the 12
- weather-related impacts. 13 Q. Let's turn to page 31, the next page in your 14 written direct. And I want to look at
- 15 demonstrative 19. Can you describe for the Court 16 what is shown in demonstrative 19.
- 17 A. Yes. This is where I have compared the impacts 18 of pumping within Georgia to the weather-related 19 impacts. There are eight bars on this figure.
- 20 The first two bars show the impact of all of 21 pumping within Georgia during 2011 dry
- 22 conditions. And we can see that the average
- 23 impact, which is in the blue line with the number
- 24 304 there, and that is the average impact of
- 25 pumping. And the maximum impact -- monthly

THE REPORTING GROUP Mason & Lockhart

3869

1 27,000 cfs.

2 So we can see all these weather-related 3 impacts here. And we -- what -- I needed to 4 present this so we can compare that with the 5 impacts of all of Georgia's pumping as well as 6 with the impacts of curtailing Georgia's pumping 7 to 1992 levels.

- 8 **Q.** And what conclusion do you reach from this
- 9 comparison?
- 10 Yes. The conclusion I reach from this comparison 11 is that the impact of pumping is negligible 12 compared to the weather-related impacts.
- 13 Q. I want to talk a little bit about groundwater 14 levels in the ACF Basin. Now, Dr. Hornberger has 15 testified that Georgia's groundwater pumping has
- 16 altered the natural hydrology of the basin by
- 17 lowering groundwater levels. Do you agree with 18 that conclusion?
- 19 Α. No, I do not.
- 20 Q. Why not?
- 21 Α. First off, I have evaluated groundwater levels at
- 22 several wells in the basin. And that showed me
- 23 that some water levels are increasing. Some 24 wells have stable, we feel, levels. And some
- 25 wells have declining water levels. So there is

Secondly, I have also looked at how agricultural irrigation has increased within Georgia from the '70's through the 1990's; and the largest increases had occurred in that time period. And I look at water levels during that time period, and water levels seem to be generally stable during that time period or even slightly increasing. So when you see that increase in agricultural irrigation within Georgia and compare it to groundwater levels, you don't see groundwater levels decreasing as a

- 14 Q. Now, in your direct testimony on page 62, in 15 demonstrative 37 you actually show groundwater 16 information for a well that is in Florida, not in 17 Georgia. Why are you showing groundwater 18 information from a well in Florida?
- 19 A. Yes. Demonstrative 37 is groundwater level --20 shows groundwater levels from a well in the Upper 21 Floridan Aquifer right adjacent to the ACF River 22 Basin, but not within the ACF River Basin. And 23 the reason I show this is because the -- this 24 water level signature that I see in this graph is 25 very similar to the water level signatures that

THE REPORTING GROUP

Mason & Lockhart

within the basin occurred between 1975 through the 1990's. And the blue -- that's the red line. And the blue line shows the water levels at the well in the basin in the Upper Floridan Aquifer. And we can see that the water levels are not

increases in pumping within Georgia occurred --

A. Yes. As we see in this graph, the largest

The gray bars show the annual precipitation at the gage within the basin, and the water levels generally follow that trend.

declining as a result of this increased pumping.

In fact, Dr. Langseth in his expert testimony also said that water levels generally follow precipitation, recharge trends, though they may lag in time.

- Q. Now, the last piece of analysis that you had mentioned with respect to groundwater levels was an analysis that you did of long-term trends in different wells. And if you turn to page 60 and you look at demonstrative 35, is that the analysis you were referring to?
- 22 A. Yes. Demonstrative 35 shows the trend analysis 23 that I have done in Upper Floridan Aquifer water 24 wells.
- 25 **Q.** And what did you find in that analysis? THE REPORTING GROUP Mason & Lockhart

3873

we see in wells within the Upper Floridan Aquifer in Georgia.

As you can see here, water levels decline in the dry season and rise back up every year in the wet season. However, if you look at 2011 and 2012 -- and this is a well in Florida -- you see that the rise has not been complete. But then when you get back into 2013, you see that the rise in water levels is pretty much full compared to previous.

And this is the same signature we see for wells in Georgia. So what I understand from that is that this could be regional precipitation or weather-related issues. And you cannot have the same signature here in Florida in a different basin because of pumping in Georgia.

Q. Now, you said before that another analysis you had done was you compared pumping to groundwater levels to see if there was a correlation or an inverse correlation between the two.

And let's look at demonstrative 38 in your direct testimony on page 63. And does that show the results of your analysis?

A. Yes. That is correct.

25 Q. And can you describe what you found?

> THE REPORTING GROUP Mason & Lockhart

3875 A. I have done two different trend analyses. The second to last column shows my results from my linear trend analysis. And that shows that some wells indicated a declining trend, some wells indicated an increasing trend, and some showed a generally stable trend.

I also did this Mann-Kendall statistical trend analysis, and that also shows that all wells are not decreasing. Some are stable. Some are decreasing, and some are increasing in the basin.

12 Q. And based on all these analyses that you have done with respect to groundwater levels, what have you concluded about the general health of the aquifer in the Upper Floridan?

16 A. The general health of the aquifer in the Upper 17 Floridan is good.

> We see, if you look at the monthly water level changes also, that water levels drop in the dry period and rise back in the wet period. They may not rise back fully during droughts or multi-year droughts; but once there is a return of normal precipitation or wetter periods, you see that the water levels bounce right back up and that the aquifer gets fully recharged.

> > THE REPORTING GROUP

TRIAL - November 29, 2016 (Vol. XV) Florida v. Georgia 3878 1 Q. Now, during your cross-examination you were asked 1 And finally, the blue hole springs which were 2 2 about a variety of local issues including the referred to was Radium Springs. So I evaluated 3 sustainable yield analysis in Spring Creek. And 3 against the flows at Radium Springs. And minimum 4 I think if you go to demonstrative 46 in your flows could be as low as 4 cfs in previous 5 direct testimony -- it's page 76 -- you have a droughts. 6 chart that summarizes your analysis as to all of 6 So, again, when we compare all these numbers 7 7 to the weather-related factors on the right, the 8 A. Yes. That is correct. 8 minimum flow or the annual average flow or the 9 Q. And can you describe the analysis that's 9 fluctuation in flow every year, or the 10 reflected in demonstrative 46. 10 fluctuation in flow between wet and dry years, 11 A. Yes, I can. Again, the last four bars are the 11 you can see that these numbers are negligible. 12 same bars that we saw earlier which indicate the 12 Q. The last topic that I would like to cover is 13 weather-related impacts. Now, starting from the 13 Dr. Sunding's conservation scenarios. Now, 14 first of those bars, the first one shows the 14 you talked a little bit about this on 15 maximum agricultural withdrawals from surface 15 cross-examination; but are you aware that 16 16 water irrigation in the basin; and that is 333 Florida's economist has said that Georgia can 17 cfs. And then average -- the second bar there 17 increase flows by 1700 cfs just from a reduction 18 shows the impact of a 10 percent error in Upper 18 in agricultural irrigation? 19 Floridan Aquifer pumping estimates. So if there 19 A. I believe he said that, yes. 20 20 were errors in the pumping estimates and if there **Q.** And do you have an opinion about whether it's 21 21 was a 10 percent error, you would get 54 cfs possible to achieve 1700 cfs from a reduction in 22 22 impact into the 10 percent error throughout the agricultural irrigation? 23 23 basin. A. Yes, I do have an opinion of that. 24 Around 54. I say 538 cfs is the entire 24 Q. Okay. And what is your opinion? 25 25 impact of pumping; so 10 percent of 538 is 53.8, A. It is not possible. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3877 3879 1 so 54 cfs. Q. Why do you say that? 2 2 The next, third, bar indicates the water First thing is Dr. Sunding has used impact 3 level impacts. What I had done is I conducted a 3 factors to do his calculations. And those impact 4 model simulation in steady state -- by steady 4 factors change when you change your distribution 5 5 state I mean long-term impacts -- to see if there of pumping or when you change your timing of 6 pumping. He needs to have run a model to was a 2-foot decline basin-wide in water levels 6 7 7 everywhere, then you could get an impact of 39 to evaluate that. 8 217 cfs. 8 Technically, if you look at the impact of all 9 9 Then I go to the sustainable yield issues or agricultural pumping within Georgia, which I have 10 the local issues which we talked about. And when 10 shown, it is around -- it's less than a thousand 11 11 I evaluated that sustainable yield criteria at cfs. That's my calculation. 12 12 Muckaloochee Creek, that was less than 1 cfs. Also, Dr. Langseth had done a calculation 13 13 I evaluated flows at the Iron City Gage. And during his deposition. And in that calculation, 14 in the earlier period of record, before there was 14 he was -- he got less than 1700 cfs. 15 15 irrigation also, when there were droughts, those And even if you now take his 40 percent 16 flows could be as less as -- as low as 10 to 20 16 impact factor and change it to 60 percent impact 17 cfs. I -- I believe as less as 10 cfs. And Iron 17 factor for groundwater pumping and add what he 18 City Gage showed no flow in the current drought. 18 claims is the impact of surface water flows, 19 So the difference between 10 cfs off a previous 19 surface water withdrawals, you still get less 20 drought and no flow for the current drought is 20 than 1700 cfs. 21 around 10, which is what I'm indicating here. 21 Q. So you're saying that whether you use your

> THE REPORTING GROUP Mason & Lockhart

fraction of a cfs.

The next one is Mosquito Creek, which also

came up in the sustainable yield study. And that

had an even minor impact. It was less than a

THE REPORTING GROUP

numbers or Dr. Langseth's numbers, it doesn't

groundwater pumping in the ACF Basin, you still

would not get the 1700 cfs that Dr. Sunding says

matter. If you stopped all pumping --

- 1 Q. Okay. Dr. Panday, during redirect, you talked a little bit about groundwater levels. Do you 2
- 3 recall that?
- A. Yes.
- 5 Q. In fact, in your direct testimony in section 9,
- 6 you state that, quote, there is no evidence of
- 7 groundwater pumping in the ACF River Basin
- 8 causing long-term depletion of the Upper Floridan
- 9 Aquifer.
- 10 Do you recall making that testimony?
- 11 A. Yes.
- 12 Q. Okay.
- 13 A. Specifically basin-wide declines.
- 14 **Q.** Basin-wide declines. But you do acknowledge that 15 individual wells have declined?
- 16 A. Yes. Some wells have declined, some wells have
- 17 increased, and some wells have been stable.
- Correct. 18
- 19 **Q.** Let's take a look at the particular table you
- 20 were reviewing with counsel for Georgia. I
- 21 believe that was on page 60 of your prefiled
- 22 direct. That's behind tab 1.
- 23 This is the trend analysis for the 20 wells.
- A. Yes. I'm there. 24

1

7

25 **Q.** And the time period that you have looked at here

THE REPORTING GROUP

Mason & Lockhart

A. I have -- this trend analysis is for the entire

2 record of -- period of record from '75 through

3 2015. But when I looked at the individual wells,

I do have statistics, I believe, for pre-'92 5

conditions and post-'92 conditions.

6 **Q.** And those statistics, if you recall, showed that 7 18 of the 20 wells are declining post-1992; isn't

that true?

A. I do not recall. But I do recall that Florida had done a trend analysis for post-1992 conditions and pre-1992 conditions. And in that, a lot of those wells showed declining water levels post-1992, yes.

And I'm not surprised about that because you're starting off with high water levels in 1992 through 1998. There were either normal or average weather conditions -- precipitation conditions. And then after that, we start getting into these multiple multi-year severe droughts. So the water levels started off high in 1992 and dropped after that. So that's not surprising.

I, myself, have done an analysis starting from 1998, which is just before those droughts hit. And when you look at the water levels

> THE REPORTING GROUP Mason & Lockhart

3885

is 1975 through 2015?

- 2 A. That is correct. Any data that was available 3 within that time period has been analyzed.
- Q. Okay. And of these 20, 11 are decreasing or 4
- 5 potentially decreasing? 6 A. From the linear trend analysis, I see one, two,
 - three, four, five, six showing a declining trend.
- 8 And from the Mann-Kendall statistics, it shows
- 9 one, two, three, four, five of them with a
- 10 decreasing trend, with one, two, three, four,
- 11 five, six of them with a probably decreasing 12 trend.
- 13 Q. Okay. So it's a total of 11 that are either 14 decreasing or probably decreasing?
- 15 A. From the Mann-Kendall statistical analysis, that 16 is what it shows.
- 17 Q. All right. And from the Mann-Kendall statistical 18 trend analysis, it shows five as being stable?
- 19 A. And it shows five as being stable; correct.
- 20 **Q.** And three with no trend?
- A. And three with no trend, yes. 21
- **Q.** And one that's increasing? 22
- A. Yes. 23
- 24 **Q.** And you actually looked at this -- these 20 wells
- 25 pre-1992 and post-1992 as well; didn't you?

THE REPORTING GROUP Mason & Lockhart

1 pre-1998, they do not show a declining trend.

And that was, in fact, when agricultural pumping

increased. The most increases occurred in 3

Georgia during that period of time. And then 4

5 when you look at the post-1998 -- also in my

direct I have that -- there is no declining trend again, because we started off low; and we are

8 staying low.

9 $\boldsymbol{Q}.\;\;$ Sir, is your testimony that agricultural 10 irrigation increased in 1998, not in the '70's?

11 No, I did not say that. I said maximum 12 agricultural increases occurred from the '70's

13 through the '90's. That's what I said. Q. Sir, can you please look at tab 21 of your

binder. Tab 21 is JX-83. It's a USGS report

15 16 entitled Groundwater Conditions in Georgia,

17 2010-2011. Have you seen this report previously, 18

- 19 A. Yes. I believe I have seen this report 20 previously.
- 21 Q. Okay. Can you turn with me to page 12. On
- 22 page 12 there's a discussion that begins on a
- 23 paragraph that starts with groundwater pumping is
- 24 the most important human activity that affects --
- 25 do you see that?

THE REPORTING GROUP

TRIAL - November 29, 2016 (Vol. XV) 3888 1 A. Yes, I see that. 1 2 2 Q. Can you read that paragraph to yourself. 3 A. Yes, I read that. 3

Q. Okay. And you agree with the statements in that

paragraph; don't you?

6 A. It says that the most important human activity 7 that affects groundwater storage and the rate of 8 discharge from an aquifer is groundwater pumping.

> So he's specifically talking about human activity, and I guess that is the case. I mean, there could be other human activities like dredging or something that could impact the groundwater flow to streams. But I guess that's not a common daily activity, and groundwater pumping might be.

So I agree that from human activities, groundwater pumping can affect the storage as well as the discharge from the aquifer.

19 Q. Okay. And then there is a hydrograph of a 20 particular well in Randolph County. Do you see 21 that?

22 A. Yes, I see that.

23 **Q.** And that shows a trend line; doesn't it?

24 A. Yes, it does.

9

10

11

12

13

14

15

16

17

18

25 Q. And that's decreasing, sir?

> THE REPORTING GROUP Mason & Lockhart

those wells during the 2010 to 2011 period by as

much as he says. I don't know these numbers, but they would decline because of the drought.

4 Q. Okay. And did you -- did you study this data in 5 connection with issuing your direct testimony?

6 A. I don't believe I have looked at this.

> This is a local impact, again. There are wells where it says that the impacts are higher. There are wells where it says that the impacts could be lower.

And, again, I was evaluating the impacts of baseflow due to pumping. So my specific objective was not to look at water levels, but to look at how much the -- there is a reduction in baseflow because of pumping in Georgia.

16 **Q.** But you rendered an opinion that there is no 17 evidence that groundwater levels are declining?

18 A. That is correct. In the Upper Floridan Aquifer.

19 But that's not what you looked at?

20 A. I looked at the data for different wells in the 21 Upper Floridan Aquifer to evaluate that.

22 Q. Sir, you're not a climate expert?

23 Α. No, I'm not.

7

8

9

10

11

12

13

14

15

Q. Okay. And you're not a hydroclimatologist? 24

25 A. No, I'm not.

> THE REPORTING GROUP Mason & Lockhart

3889

A. Yes, it is. But this line is not in the Upper 2 Floridan Aquifer, and it's just one well.

3 **Q.** Your testimony is that Randolph County is not in

the ACF Basin? 4 5 A. No. It said over here that this is a Clayton --

6 completed in the Clayton Aquifer in Randolph

County. It specifically says that in the last sentence of this paragraph you made me read.

9 So --

7

8

25

10 **Q.** My question is is this in the ACF Basin?

11 A. It is in the ACF Basin, yes. It's not in Upper 12 Floridan Aquifer is what I said.

13 Q. Let's look at the Upper Floridan Aquifer on 14 page 24.

15 A. Yes. I'm there.

16 Q. Okay. And you can read the paragraph right 17 before the reference section.

18 A. Yes. I read that sentence.

19 Q. Okay. And do you agree with the statements 20

21 A. I do not know the context of this. It says here

22 during 2010 and 2011 water levels in all wells 23 declined at some particular rate, which reflects

24 drought conditions that existed in 2010 and 2011.

So I do agree that water levels dropped in

THE REPORTING GROUP

Mason & Lockhart

1 Q. So, in fact, at your deposition you weren't aware 2

as to what that meant?

3 Α. Right.

Q. All right. Do you know now?

5 Someone who looks at the hydrologic impacts of

climate. I believe that's what it would be. 6

7 Q. And when you examined precipitation data in this

8 case, you had not done that type of analysis

9 previously; is that correct?

10 A. What kind of analysis are you specifically 11 referring to?

12

Q. The analysis that you did in this case, and that

13 is evaluating trends in precipitation.

14 A. I looked at the precipitation data across the

basin. And I looked at how much the average

16 precipitation was pre-'92, and I looked at the

17 average precipitation post-'92. That's what I

18 have done.

19 Q. I understand that, sir. I'm talking about

20 outside of this engagement, outside of this

21 project, did you ever have any other project

22 where you looked at precipitation trends?

23 A. I have used precipitation data in other models.

24 In this modeling I haven't even used the

25 precipitation data for my model. I have looked

THE REPORTING GROUP

Mason & Lockhart

15

3894 1 at the precipitation data to see what it tells me 1 overall. 2 2 about the basin. What I have done here is just to examine what 3 This is like my due diligence which I do to 3 the precipitation was between 1975 and current 4 understand the system. So that is when I looked conditions across the basin. So I just selected 5 at precipitation data. I looked at streamflow data -- I selected gauges which had a long -- a 6 data. I looked at water level data for that 6 period of record that existed between 1975 and 7 purpose. 7 2015, as much as was available. 8 Q. Okay. And when you looked at precipitation 8 Q. Do you know who Dr. Dennis Lettenmaier is? 9 trends, you looked at select rain gauges in the 9 Yes, I know who he is. 10 ACF Basin? 10 Q. Have you read his prefiled direct testimony in 11 A. I selected -- yes, rain gauges across the ACF 11 this matter? 12 River Basin. 12 Α. No, I have not read his prefiled direct 13 **Q.** And how many rain gauges did you look at, sir? 13 testimony. 14 A. I don't remember the exact number; but there were 14 Q. Okay. Did you read his deposition transcript? 15 a few, I believe. 15 Α. No, I have not. I have seen his expert report 16 16 Q. Okay. And if you look at -- I think it's figure briefly when it had first been put out. 17 C-2 in your report. It's demo 20 of your 17 Q. Okay. And you understand that he's a 18 18 prefiled direct. hydroclimatologist? 19 I think there's seven. Does that sound right 19 I don't know exactly what he does. I believe 20 20 to you? he's a professor. 21 21 Q. Okay. Sir, we talked a little bit about A. What am I looking at, please? 22 22 **Q.** I'm trying to understand how many rain gauges you Dr. Sunding; and then you were asked some 23 looked at across the entire basin. Does the 23 questions about that on redirect. You're aware 24 24 that his conservation scenarios include number seven sound correct to you? 25 A. It may be -- I thought eight or 10, yes. A small 25 eliminating evaporation from farm ponds? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3893 3895 1 number. But I don't know the -- I don't recall 1 A. I believe he was looking at all agricultural 2 exactly if it was seven. 2 reductions of pumping in his conservation 3 **Q.** Why don't we get the exact number. 3 scenarios. Q. Right. I'm not talking about pumping now. I'm 4 If you look at page 33 --4 5 5 A. Of my direct? talking about reducing evaporation from farm Q. Yes, sir. 6 6 ponds. Do you realize that that was a component 7 7 A. Yes. Yes. of his conservation scenario? 8 **Q.** I count eight. Is that what you get? 8 I do not recall that. 9 A. Yes. There were eight stations, but -- that is 9 Q. All right. So when you said that the 2,000 cfs 10 10 correct. that he's proposing is not achievable, you didn't 11 **Q.** Do you know how many stations exist throughout 11 consider that? 12 12 Α. the entire basin? Essentially the farm ponds are also filled by 13 13 A. No. But there are several more. groundwater pumping or by surface water stream 14 Q. Okay. Do you know that climatologists typically 14 when the weather is wet. So those farm ponds are 15 rely on a gridded precipitation data in 15 not taking away anything from dry weather. In 16 formulating precipitation trends? 16 fact, in dry weather they have collected water so 17 A. I don't know what climatologists do. But we use 17 you don't have to pump as much. 18 gridded data if needed. We use the point 18 So the farm ponds was part of the database 19 measurement data as well. 19 that was given to me. And I approximated that 70 20 Q. What did you use here? 20 percent of that water -- the farm ponds water 21 A. I have looked at the point measurement data. I 21 came from groundwater, and 30 percent came from 22 22 haven't looked -- used this in a model. surface water. So the farm ponds were accounted 23 23 Gridded data is good when you have to cover for in the water consumption. 24 the entire region; and you put that -- those 24 And do you know that Dr. Sunding explained that 25 numbers in a model. So you need coverage 25 you could save 271 cfs from reducing evaporation THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

TRIAL - November 29, 2016 (Vol. XV) Florida v. Georgia 3898 1 from farm ponds? Do you know that? BY MR. QURESHI: A. I do not know what Dr. Sunding has done in this 2 2 **Q.** I may have asked you this previously, Dr. Panday. 3 regard. 3 Have you read the entirety of Dr. Langseth's Q. Okay. Have you heard about the Georgia Water 4 4 transcript? 5 Resources Institute? 5 A. No, I have not. 6 A. I'm not sure. 6 Q. Okay. Well, I'll direct you to page 1028, 7 Q. Okay. Have you heard of Dr. Georgakakos? 7 line 24, through 1030, line 3. A. I have heard the name, yes. 8 A. Okay. I read this. Q. How about Dr. Martin Kistenmacher? 9 Q. Okay. The next section I want you to read is on 10 A. I'm not sure. 10 the following pages, page 1032, line 3, to 1033, 11 **Q.** Okay. Were you in court at all last week 11 line 9. 12 12 when we were discussing the UIF report issued by A. Yes. I read this. 13 13 Q. Okay. Does this inform your understanding of 14 A. I was in court for a short period during 14 Dr. Langseth identifying a range of potential 15 Dr. Hornberger's testimony. 15 impact factors from 41 all the way up to 87 16 Q. Okay. Sir, if you could turn to tab 19 of 16 percent? 17 volume 2 of your binder, I'm going to ask you if 17 A. I have not seen this before. 18 you have ever seen this document before. 18 **Q.** Okay. So when you said that he had abandoned his 19 A. No, I have not seen this document before. 19 opinion, it was not based on reading this 20 20 **Q.** Okay. So in your work on this, you're not transcript? 21 familiar with criticisms by the Georgia Water 21 A. That is right. They were -- Florida has been 22 22 Resources Institute of the agricultural water using the impact factor of .6 in the direct 23 consumption numbers provided by Georgia EPD? 23 testimonies that were submitted. That's why I 24 A. I don't know if there was a criticism. You're 24 said that. And previously they used the impact 25 telling me that there was a criticism. I don't 25 factor of .4. And that is why I said that they THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3899 3897 1 know that there was. 1 had abandoned the .4 impact factor and selected 2 2 **Q.** I'm asking you if anyone has ever told you that .6 impact factor instead. 3 there was a criticism? 3 **Q.** You understand that this deposition that you are 4 A. No. I don't know that. 4 looking at was given before the prefiled direct 5 5 **Q.** Okay. Has anyone ever told you that GWRI was submitted in August? 6 estimated that up to 1200 cfs a year is lost to 6 A. Right. It was in August. 7 evaporation from farm ponds? Did you ever hear 7 Q. And you hadn't read this when you wrote your 8 that before? 8 prefiled direct? 9 A. Not before now, no. 9 A. No, I have not. 10 Q. Okay. 10 **Q.** Okay. Sir, you were shown a portion of 11 11 Dr. Langseth's testimony during your redirect MR. QURESHI: Nothing further. 12 examination. Do you recall that? 12 SPECIAL MASTER LANCASTER: Redirect? 13 A. Yes. I do. 13 MS. ALLON: Yes, your Honor, very 14 Q. Okay. And it was for a particular day. I 14 briefly. 15 believe Mr. -- Dr. Langseth was deposed for four 15 REDIRECT EXAMINATION 16 days. Does that sound correct to you? 16 BY MS. ALLON: 17 A. I believe he was deposed for four days, yes. 17 Q. Dr. Panday, I just want to go back to one exhibit 18 Q. Okay. I'm going to show you a transcript for 18 that counsel for Florida was asking you about 19 another day. I don't think you were at this 19 just now. It was behind tab 21 in your binder on 20 20 particular day of his deposition, but I want to page 24, the USGS report. 21 A. Yes. I'm there. see if that relates at all to your understanding 21 22 of the impact factor range that Dr. Langseth 22 **Q.** Page 24? 23 23 A. Yes. I'm there.

And if you want, I can explain a little. What I meant was that if you put in weather-related conditions which could be different, then you could get different answers. But if the objective of the model was the impact of pumping, then that what you put in with regards to the weather-related impacts do not make a difference on the impact of pumping. SPECIAL MASTER LANCASTER: So if somebody picked a model and put certain things in, they might get certain results? THE WITNESS: Right. SPECIAL MASTER LANCASTER: Let me ask you this. Have you heard of the Battle Bend? THE WITNESS: I heard about this yesterday, your Honor. SPECIAL MASTER LANCASTER: Do you know where it's located? THE WITNESS: I Google-Mapped it, and I

- 1 saw that the Google Map showed it right in
- the middle of a lake somewhere in Florida
- along the Apalachicola River, I believe.
- SPECIAL MASTER LANCASTER: So if the
- United States Supreme Court were to order
- that the Battle Bend be disengaged, what
- 7 effect would that have?
- THE WITNESS: I'm not sure I understand 8
- 9 your question.
- SPECIAL MASTER LANCASTER: Well, suppose 10
- 11 that the Supreme Court said get rid of Battle
- Bend; disengage it so it doesn't connect 12
- anymore. What effect would that have? 13
- THE WITNESS: I'm not sure, your Honor. 14
- 15 SPECIAL MASTER LANCASTER: Okay.
- Suppose the Supreme Court ordered that a 16
- 17 canal be created between the Tennessee River
- and the Chattahoochee River. What effect 18
- would that have? 19
- THE WITNESS: I'm not sure, your Honor. 20
- 21 SPECIAL MASTER LANCASTER: There are, I
- think, some 300 sloughs in this area? 22
- THE WITNESS: I do not know, your Honor. 23
- SPECIAL MASTER LANCASTER: Well, suppose 24
- the Supreme Court ordered that they all be THE REPORTING GROUP

Mason & Lockhart

3905

- blocked. What effect would that have?
- THE WITNESS: I would not know, your 2
- Honor. I have been analyzing the groundwater 3
- effects on pumping. 4
- 5 SPECIAL MASTER LANCASTER: Right. And I
- understand that. I understand your 6
- 7 testimony. I just thought I would take a
- chance that you might be able to answer. 8
- 9 Somebody else will be able to -- they're
- 10 going to get asked the questions, too.
- 11
- You probably don't know the answer to
- this one either. Oysters are male and then 12
- 13 they become female?
- THE WITNESS: I do not know, your Honor. 14
- 15 SPECIAL MASTER LANCASTER: Okay. I
- think I'm going to strike out, but let me ask 16
- 17 you a couple of more questions. What would
- happen if below Bainbridge and above Sumatra,
- the gages -- what would happen if all of the 19
- 20 water flowing in were stopped?
- 21 THE WITNESS: I believe it would be very
- 22 difficult to stop all the water flowing
- 23 downstream, your Honor. You could build a
- 24 dam, but then water levels would rise and
- flow over. So --

THE REPORTING GROUP Mason & Lockhart

- 1 SPECIAL MASTER LANCASTER: Okay.
- 2 THE WITNESS: I don't think we can stop
- the water at Bainbridge. 3
- SPECIAL MASTER LANCASTER: Let me ask
- you another question, which will indicate my
- ignorance even further.
- 7 If it rains and rains and rains and
- rains, are you going to get more groundwater? 8
- 9 THE WITNESS: Your Honor, I believe
- right now you know more about this case than 10
- 11 I do or a lot of us do. But -- so when you
- 12 say forgive my ignorance, I think you know a
- lot more than we do. 13
- But at the same time, if it rains and 14
- rains, the water levels will rise up to the 15
- maximum. And once the aguifer is fully 16
- recharged, it cannot rise anymore. You're 17
- 18 going to get runoff.
- 19 SPECIAL MASTER LANCASTER: So -- and
- if it doesn't rain at all, you get a 20
- 21 drought.
- 22 THE WITNESS: Yes, your Honor. And the
- groundwater levels will drop because of the 23
- 24 drought.

25

SPECIAL MASTER LANCASTER: It seems THE REPORTING GROUP Mason & Lockhart

3907

- 1 to me, as a layman, the more rain you get,
- the more water you get; the less rain you
- get, the less water you get.
- Is that right? 4
- 5 THE WITNESS: That is correct, your
- Honor. 6
- 7 SPECIAL MASTER LANCASTER: Thank you.
- MS. ALLON: Nothing else, your Honor. 8
- 9 MR. QURESHI: Nothing further, your
- Honor. 10
- 11 SPECIAL MASTER LANCASTER: You're off
- 12 the hook.
- 13 THE WITNESS: Thank you, your Honor.
- MS. ALLON: Georgia is ready to call its 14
- 15 next witness, Dr. Phil Bedient.
- 16 SPECIAL MASTER LANCASTER: Thank you.
- 17 While he's taking the stand, I just got
- an e-mail from my legal assistant -- we don't 18
- have secretaries anymore -- from my legal 19
- 20 assistant saying that Governor Deal was
- 21 making a talk about something. Do you know
- 22 what he's talking about?
 - MS. ALLON: I don't, your Honor.
- SPECIAL MASTER LANCASTER: Okay. Just 24
- 25 curious.

THE REPORTING GROUP Mason & Lockhart

- **Q.** And he explained the different circumstances
- 2 under which the minimum release requirements are
- 3 determined. Correct?
- A. Correct.
- 5 Q. And he talked about three factors, time of year,
- 6 basin inflow, and composite storage. Do you
- 7 recall that?
- 8 A. Yes. Those are the three main drivers that sort
- 9 of, if you will, dictate the outflow and all of
- 10 that from Woodruff Dam.
- 11 **Q.** And he also noted that there was a 5,000 cfs
- 12 minimum release requirement when the Corps is in
- 13 something called drought operations. Correct?
- 14 A. Yes.
- 15 Q. Okay. During this explanation, Dr. Zeng did not
- 16 ever use the term offset operation. Correct?
- 17 A. I didn't listen to it that closely.
- 18 Q. Okay. Did you look at his prefiled direct
- 19 testimony?
- 20 A. I have -- I have glanced through it; but I have
- 21 not studied it.
- 22 **Q.** Okay. From your glance through of his prefiled
- 23 direct testimony, do you recall whether Dr. Zeng
- 24 ever used the term offset operation?
- 25 A. No, I don't.

THE REPORTING GROUP

Mason & Lockhart

1

3913

- **Q.** Or even the term offset?
- 2 A. No, I don't.
- 3 **Q.** And you didn't use the term offset operation in
- 4 your expert reports; did you?
- 5 A. I would have to go back and -- and carefully look
- 6 or study those reports. They're fairly
- 7 extensive.
- Q. Okay. 8
- 9 A. It's a -- it's a term that I have used simply
- 10 because it -- when we say offset, it's something
- 11 that's fairly easy to understand.
- 12 **Q.** Well, we looked for the term offset operations in
- 13 your two reports which are in your binder. I'm
- not suggesting that you look through them right 14
- 15 now, but we couldn't find that term anywhere in
- 16 your two expert reports. But we do see it when
- 17 we get to your prefiled testimony. Correct?
- 18 A. Yes. And I believe that there's a graphic that 19 sort of demonstrates the offset.
- 20 And we call it the offset because, again,
- 21 we're trying to simplify a fairly complex
- 22 phenomenon. And by calling it offset, we think
- 23 that's an easily understandable definition.
- 24 **Q.** Are you the one who made up the term offset
- 25 operation?

THE REPORTING GROUP

Mason & Lockhart

- A. I'm not sure if it was something that I came up
- 2 with or if it was something that we determined
- 3 within the group.
- Q. Okay. Well, you're familiar with the Corps
 - October 2015 Draft Environmental Impact Study for
- 6 the Water Control Manual update. Correct?
- 7 I'm familiar with it. Yes.
- 8 Q. Okay. And that represents the Corps' most
- 9 comprehensive description of its reservoir
- 10 operations in the ACF Basin?
- 11 Α. I believe so.
- 12 Q. And it totals over 4200 pages?
- 13 I know it's extensive.
- 14 Q. Don't worry. I didn't put the whole thing in
- 15 front of you.
- 16 Α. Please don't. Thank you.
- 17 And are you aware that the term offset operation
- 18 is nowhere among those 4200 pages?
- 19 Α. If you're telling me that, I wouldn't be
- 20 surprised. It -- again, it's a term that is used
- 21 in my demonstrative No. 12 in my direct testimony
- 22 to offer up, if you will, a concept so that it's
- 23 easily understandable.
- 24 Q. And you know that offset operation is not
- 25 actually an operating protocol of the Corps.

THE REPORTING GROUP

Mason & Lockhart

Correct?

- 2 A. Well, no; that's not true at all. I believe we
- 3 have got plenty of information, plenty of data,
- 4 plenty of plotted, if you will, hydrographs and
- 5 response curves from the reservoirs that clearly
- 6 show that offset is taking place, especially
- 7 during drought conditions.
- 8 **Q.** It's not a term that's defined like drought
- 9 operations is in any of the Corps materials;
- 10 correct?
- 11 A. I will agree with what you just said, yes.
- 12 And this is precisely why the U.S. Government
- 13 says that you and Georgia are speculating when
- 14 you assert that the Corps will offset any water
- 15 conserved on the Flint. Correct?
- 16 Α. Well, now, that statement comes out of the -- the
- 17 U.S. Government position, I recall reading that.
- 18 And while they go on to talk about that, they
- 19 were also mainly talking about annual flows and
- 20 all sorts of flows. And they also say in that
- 21 exact statement that a lot of this is subject to
- 22 a lot more study, and there's more data that
- 23 needs to be evaluated.
- 24 Sir, you recall reading the Government's brief?
- 25 It was an amicus brief that they filed in

THE REPORTING GROUP

3915

3918 1 opposition to Georgia's motion to dismiss in this 1 would increase the basin inflows and thereby 2 2 increase the amount of water flowing into 3 A. I recall seeing it, yes. 3 Florida. 4 Q. Okay. And do you recall that in that brief the A. I see the sentence. I do. 5 United States responded directly to the argument 5 Q. And, sir, the Government goes to say that Georgia 6 put forth by Georgia and you that the Army Corps 6 gives Flint River short shrift by suggesting that 7 would increase impoundsments upstream to offset 7 the Corps in this circumstance would just offset 8 increased flows from the Flint River; didn't it? 8 the increased flows from the Flint. Correct? 9 A. You would have to show me the document before I 9 Right. I see that. 10 could --10 **Q.** And then they go on to say that the offset theory 11 Q. Okay. We can pull that up. 11 is actually entirely unwarranted speculation. Do 12 MS. WINE: Let's put that up on the 12 you see that? 13 13 A. I see what they're saying in this brief. But 14 BY MS. WINE: 14 they also go on to say that we cannot say at this 15 Q. We have got it here. I think it's in tab 4 of 15 juncture without further factual development that your binder as well, if that's easier for you. 16 16 Florida would not be able to receive any minimum 17 A. Sure. 17 flow that might be adjudicated entirely through 18 MS. WINE: Mr. Walton, if we could turn 18 other caps and other issues. And in addition, we 19 to page 19 of that brief. 19 have done extensive studies as part of this work 20 20 Let's put 18 and 19 on the screen, that clearly shows that there are many, many 21 21 actually. times with respect to the way that the Army Corps BY MS. WINE: 22 22 of Engineers operates under the RIOP, especially 23 **Q.** Dr. Bedient, the section on page 18 that starts 23 in drought conditions. Q. 24 under the heading B is the section that I'm 24 Sir --25 referring to where the Army Corps is responding 25 A. There are many, many times when Florida will not THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3917 3919 1 to this offset argument. 1 receive any additional flows in the system. 2 MS. WINE: And if we could now, 2 **Q.** Sir, you're not trying to suggest to this Court 3 Mr. Walton, let's just blow up 19 -- page 19. 3 that you know more about how the U.S. Army Corps 4 operates than the U.S. Government itself; are And we have got some language already 4 5 highlighted there. 5 you? 6 BY MS. WINE: 6 A. No. I would not. 7 Q. Sir, is this the brief that you recall reading 7 Q. Okay. Now, your offset theory depends on the 8 8 from the United States Government? assumption that the Corps is only going to 9 A. Yes. 9 release the minimum amount and no more. Correct? 10 Q. And you recall that the United States first 10 A. Well, the offset theory -- first of all, this 11 11 is -- this is -- it's within the RIOP; and the recognized that a cap on Georgia's consumption, 12 12 particularly on the unregulated Flint River, as RIOP is a very complex document. And under 13 13 certain conditions -- under certain conditions -they call it, could increase the amount of water 14 flowing into Florida. Correct? 14 there are periods where this offset will occur, 15 15 especially when flows are below 5,000. I'm just looking at that first highlighted 16 16 **Q.** So during a low flow period? sentence, sir. 17 A. Well, it's difficult with these types of 17 A. Well, or during a drought-type period, yes. 18 documents to simply look at a single sentence and 18 Q. All right. If we can put that brief back up and 19 19 pull it out of context. keep reading --20 20 Q. Okay. I'm going to read on; but for now, I'm MS. WINE: Jon, can you pull that back 21 21 just wondering if you see right there in that up? 22 22 sentence that the government says that it's at Thanks. 23 23 BY MS. WINE: least plausible that a cap on Georgia's 24 consumption, particularly with respect to the 24 **Q.** So the Government also says here that an 25 Flint River, which is unregulated by the Corps, 25 increased flow during wet times would provide a THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3924 3926 1 figure right there --1 only time that they would potentially release Q. Okay. 2 2 more than 5,000 would be for some sort of 3 A. -- within zone 4. 3 emergency type situation that might be occurring Q. Oh, I'm sorry. I didn't mean to interrupt you. downstream, some kind of a navigational issue or A. Within zone 4. perhaps for a sudden need for hydropower, some **Q.** And zone 4 is when the Army Corps is in drought 6 sort of an emergency situation. Other than 7 operations. Correct? 7 that -- other than that -- they are going to meet 8 A. That is correct. 8 the minimum 5,000 discharge during the drought 9 **Q.** And as you pointed out, there is a greater to or 9 condition. And they are going to try to refill 10 equal sign there before the 5,000. Correct? 10 those reservoirs to the maximum possible. 11 Α. Yes. 11 So, sir, the answer to my question, again, is 12 **Q.** And that means that the Corps must release the 12 that, yes, they could release more than the 13 minimum amount of 5,000 cfs. Correct? 13 5,000; that's what the greater than or equal to 14 A. That's what that table means, yes. It does. 14 means? 15 Q. But it could release more; couldn't it? 15 Under a few conditions they could do that, yes. 16 16 A. Well, as a matter of fact, the operations by the **Q.** And in that sense the 5,000 minimum release 17 Army Corps of Engineers with respect to this 17 amount is not a target. Right? 18 basin include meeting seven project purposes; 18 You know that? 19 fish and wildlife being just one of those, 19 Α. As a matter of fact, they -- based on the data 20 20 recreation being another, water supply, that I have seen, especially from 2011 and 21 21 navigation, and a host of others that are listed 2012 -- and we had extensive conversations about 22 22 in my expert -- in my testimony. So all of those targets and minimums in my deposition, I 23 23 have to be balanced with respect to the way this believe -- it's pretty clear that all through 24 system is operated. That's how the Corps 24 those serious droughts in 2011 and 2012, they 25 operates the ACF Basin. And it operates that 25 were both targeting and hitting the minimum of THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3925 3927 1 with the reservoirs -- all of the reservoirs in 1 5,000. 2 place. 2 **Q.** Sir, the answer to my question is that, no, the 3 3 And, in fact, while they're meeting this 5,000 is not a target. It's just a minimum. 4 minimum flow, while they're meeting the minimum, 4 Correct? 5 5 A. I think in certain instances it's both a target they're also trying to refill those reservoirs to 6 the maximum level possible. And the only way 6 and a minimum. 7 7 Q. Okay. Sir, if you -- are you familiar with the they can do that during drought times is to keep 8 it as close to the minimum as possible while they 8 DEIS where it talks about this very point and 9 9 explains that minimum releases are minimums, not are refilling reservoirs. 10 10 targets? If they start to try to release more than the 11 11 5,000 down here, then they are violating their A. I have seen statements to that effect, but I have 12 12 overall management principles. also seen statements in the DEIS where it says 13 13 **Q.** Sir, I'm not sure if you answered my question or it's a target and a minimum. So there are an 14 if you have given me one answer. But I was 14 equivalent number of statements. 15 15 It's a huge document and -simply asking if under zone 4 under these 16 circumstances in drought operations where it says 16 Q. Right. 17 greater than or equal to 5,000, we agree that the 17 A. -- it just depends on where you happen to be in 18 Corps must release at least 5,000 cfs. Correct? 18 the RIOP during which operation you're talking 19 A. We do. 19 about. 20 Q. And all I'm asking is could the Corps release 20 Sir, have you looked at the statements that are 21 21 tied to this table or tables just like it that 22 22 A. Under these conditions, there are -- first of say that the minimums are minimums, not targets? 23 23 all, if you look back at 2011 and 2012, if you We can walk through them. We walked through 24 look at the data, you find that they released 24 this last week with Dr. Zeng. 25 very, very close 5,000 much of the time. The 25 A. I have no argument with your question. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3930 **Q.** And are you familiar with the biological opinion? 1 only 5,000 cfs crossing the state line and no 2 2 A. I'm familiar with it. more. Correct? 3 Q. That's from the U.S. Fish and Wildlife Service? 3 A. That's what it says. A. Yes. Q. Okay. And you say that the Corps will maintain 5 Q. And do you know that there's identical language 5 the 5,000 cfs minimum throughout drought 6 in the 2012 biologic opinion warning that flow 6 operations even if basin inflow exceeds 5,000 7 rates are prescribed minimums and not targets. 7 cfs. Correct? 8 Correct? 8 A. Yes. 9 A. I have seen that, I believe, yes. 9 Q. And you also note that from December to 10 Q. Okay. Now, your prefiled testimony does not 10 February -- this is now going onto 21 --11 reference any of these DEIS or biological opinion 11 actually, I'm sorry. It's on the top of 20, the 12 warnings that the RIOP flow minimum is not a 12 winter refilling season. 13 target; do you? 13 Α. On the top of where? 14 A. I don't think so. 14 Q. Top of page 20, I'm sorry, winter refilling 15 **Q.** And to the contrary, you continue to describe the 15 season. 16 16 A. Okay. release minimum as a target throughout your 17 prefiled direct testimony submitted in this 17 Q. You say that during this season, December to court. Right? 18 18 February, the Corps maintains the 5,000 cfs 19 A. Well, there was some discussion of that in my 19 requirement into Apalachicola River at all times, 20 20 deposition. And, again, the way in which they and any additional basin inflow above 5,000 cfs 21 operated this system during 2011 and 2012 from --21 is stored in the reservoirs until the system is 22 22 from my demonstratives 5 and 6 in my direct full. Correct? 23 testimony clearly show to me that it was not only 23 A. Right. 24 a minimum, but they were shooting for it. They 24 **Q.** Okay. Now, as of the time of your deposition in 25 were shooting for something close to 5,000 for 25 May of this year, you had not conducted any THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3929 3931 1 much of the summer period in 2011 and 2012. 1 empirical evaluation of the actual state line 2 **Q.** And, sir, we'll get to those demonstratives; but 2 flows to back up your claim that the Corps 3 3 discharges only 5,000 cfs during drought periods it's correct though, isn't it, in your testimony 4 submitted to this court you continued to describe 4 or low periods or during the winter refilling 5 the minimum such as the 5,000 cfs minimum as a 5 season. Correct? 6 target. Correct? 6 A. As of the time of my second report, is that what 7 A. Yes. 7 you said? 8 Q. Now, I would like to look at some of the 8 **Q.** As of the time of your deposition in May of this 9 9 statements that you made about how the RIOP 10 10 actually works. So --A. Oh, the deposition in May. 11 MS. WINE: And we can take that down, 11 That is correct. I have not. 12 12 Q. So, in other words, you had not compared observed Mr. Walton. 13 BY MS. WINE: 13 flows on the one hand with the flows that you 14 Q. In your February 29 expert report, which we can 14 predicted would occur under the RIOP. Correct? 15 pull up -- it's at tab 1, the first tab in your 15 A. Give me just a moment to check this report. 16 binder. 16 Q. I'm talking about -- well, you can look at your 17 A. Okay. 17 report, certainly. 18 Q. And I'm going to go to pages 20 and 21 in that 18 A. Well, that's what you're asking me about. 19 report. This is GX-860. I'm going to focus on 19 **Q.** Absolutely. 20 the section that starts at the bottom of 20 20 I think I can show you some excerpts from 21 21 titled Drought Operations. your deposition, if it would be helpful, where 22 22 A. Right. you were asked if you had done any of this --23 23 **Q.** And, sir, in your expert report you said that for Α. No, that's fine. I just wanted to double-check 24 the entire period that the Corps is in drought 24 for myself here based on what you're asking me. 25 operation, the Apalachicola River will receive 25 But I think you're correct. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3932 3934 1 Q. Okay. 1 Correct? 2 A. Okay. No problem. 2 A. On page where? 3 **Q.** So as of the time of your deposition, your Q. It's paragraph 28 on page 15. assumption that the Corps would target 5,000 cfs 4 A. Okay. 5 during drought operations was just a hypothesis. Q. Right at the top there. You say, as shown in 6 Correct? 6 Bedient demos 5 and 6 --7 A. Well, it was based upon my reading of and my 7 8 assessment of what I had seen in the DEIS and on Q. -- the Corps' releases --8 9 the reading of the operations -- the operational A. I see it. 10 systems for the -- for the basin -- for the ACF 10 **Q.** -- were at or very close to 5,000? 11 Basin. 11 A. Yes. I see it. 12 Q. And do you recall that at your deposition you 12 Q. Sir, let's look at demo 6 from your prefiled 13 were presented with multiple examples where the 13 direct testimony, which is right on the page 14 state line releases exceeded the RIOP's minimum 14 before, page 14. 15 requirements, and you admitted that you had not 15 A. Okay. 16 16 **Q.** In this demo you're showing a relatively flat studied the empirical data and did not know what 17 was causing those additional releases? 17 line from May through December 2012, which A. I don't believe I said that I did not know what 18 appears on this demo to be right around 5,000 18 19 was causing those releases. I believe that I, 19 cfs. Correct? 20 20 somewhere in that multitude of questioning, A. Yes. I would say that -- and this is for 2012. 21 21 suggested that some of those were related to Yes, it appears very, very close to the 5,000 22 22 mark. discretionary type releases and/or could be 23 related to flash rainfall events. I believe I 23 Q. And drought operations began in May of 2012 and 24 said that in my deposition. 24 continued through the end of February of 2013. 25 Q. You don't recall saying, I don't know exactly how 25 Didn't they? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3933 3935 1 the Corps is generating these flows above 5,000. A. They did. 2 I don't know why they are doing that or what the 2 **Q.** Okay. And so this is when the 5,000 minimum release was in effect. Correct? 3 cause of that is? 3 A. I may have said that at one time. But I believe A. This was when the 5,000 was in effect, yes. 4 4 5 that somewhere in that deposition -- are you 5 Q. Okay. Now, were you here for Dr. Shanahan's 6 6 testimony? talking about just the first deposition or the 7 7 entire deposition? It was a couple weeks ago now, and I don't 8 8 **Q.** Well, I think what I'm reading from is from day recall if you were here. 9 9 A. I was not. one of your deposition. Q. Okay. Well, Dr. Shanahan discussed a 10 A. I may have said that on day one of my deposition. 10 11 11 Q. Okay. In any event, you claim now to have demonstrative that he prepared using the same 12 analyzed these instances of flow above 5,000 at 12 data that you used to create demo 6. 13 13 the state line. Correct? MS. WINE: And let's put that up. 14 A. I have analyzed a great deal of data since that 14 BY MS. WINE: 15 first day of deposition one. 15 Q. It's in your binder. You should have a separate 16 Q. Okay. And if we look at your prefiled direct --16 cluster of demonstrative exhibits. 17 MS. WINE: On page 4, Mr. Walton. 17 A. Oh, yes. 18 BY MS. WINE: 18 **Q.** It might be in the front flap of your binder. 19 **Q.** -- the first sentence of the first bullet on 19 A. They are. 20 page 4 in bold, you now say that the state line 20 **Q.** And we're going to start with Bedient cross 21 releases are very close to 5,000 cfs during low 21 demo 1. 22 flow and drought conditions. Correct? 22 A. Okay. A. Yes, I do. 23 **Q.** Now --23 24 **Q.** And later, if we were to go to paragraph 28, you 24 MS. WINE: Jon, can we put that on the 25 say that they are at or very close to 5,000 cfs. 25 screen, please. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3936 3938 BY MS. WINE: 1 5,000. 2 Q. While we're getting it up, what Dr. Shanahan 2 **Q.** Yes. Your language is at or very close to 5,000. 3 did was he took your data from demo 6 in your 3 And what we see here for this time period is a 4 prefiled direct; and he just increased the range from 5050 to over 6,000 cfs. Correct? 5 resolution by adjusting the Y axis. And then he 5 Α. Correct. 6 also broke it down by week whereas your demo 6 6 **Q.** And the 5050 -- we'll get to that later. 7 was by month. 7 You just mentioned a safety factor. The 8 A. So let's -- let me confirm that. He adjusted the 8 5050, that is a safety factor that's prescribed 9 axis that used to be all the way up to 35,000 9 under the rules. Correct? 10 cfs? 10 A. It's -- it's contained within the -- within the 11 Q. Correct. 11 ResSim computer model that's used to operate, you 12 A. He adjusted it to range from 4900 to about 6,000 12 know, and basically run analyses for this system. 13 or about a thousand. Correct? 13 Q. Okay. Now, you haven't presented in your 14 Q. That's correct. 14 prefiled testimony or in any of your expert 15 A. All right. 15 reports the differences between actual flows 16 16 Q. Now, Dr. Bedient, there aren't any instances on observed at the Chattahoochee Gage, on the one 17 this chart, Bedient cross demo 1, where the Corps 17 hand, and minimum flows under the RIOP, on the 18 18 releases were exactly at 5,000 cfs, as you other hand. Correct? 19 contend. Correct? 19 Α. Ask that question one more time? I'm sorry. 20 20 A. That is -- well, that contention was back on day Q. Sure. I'm wondering if you presented anywhere, 21 21 one of my deposition back in May; and it's from whether in your testimony here today or in your 22 22 my first report. expert reports, something -- an analysis that 23 23 Q. Sir, I think you say that in paragraph 28 of your shows the differences between actual flows 24 prefiled direct testimony submitted to this 24 observed at the Chattahoochee Gage, on the one 25 25 hand, and minimum flows under the RIOP, on the court. And you can look back at that. You say THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3937 3939 1 that the Corps' recorded releases from Woodruff 1 other hand? 2 Dam are at or very close to 5,000 cfs. 2 A. Well, are you asking me about minimum flows under 3 3 A. At or very close is what I said. Right? the RIOP that the Corps of Engineers is 4 Q. Sure. 4 attempting to meet on a day-to-day basis? Is 5 5 A. Yes. that what you're asking? 6 6 **Q.** I'm asking if you looked at what are the minimum **Q.** So all I'm asking here is none of them are at. 7 7 Correct? flows supposed to be according to the RIOP at a 8 8 A. Okay. Yes. particular time, and if you plotted that as 9 **Q.** We'll break this down and make it very simple. 9 against the actual observed flows at the 10 A. I'll agree that we did not exactly hit the 10 Chattahoochee Gage? 11 11 five-zero-zero mark. Α. It's done -- I suppose one could say that on this 12 Q. Okav. 12 demo 1, the minimum is 5,000. And you have got a 13 13 A. But if you will look across that dataset, you plot of what the flows were. So there's a plot. 14 will see that it ranges from a low of 5050 -- and 14 Q. But this demo, which we took from the data that 15 then there are, of course, some rainfall events 15 you used in your demo 6 in the prefiled direct, 16 in the middle that adjust these flows up to 16 doesn't actually use the actual observed flows at 17 6,000. And then it hovers around the 5100 mark. 17 Chattahoochee Gage. It uses provisional data, 18 And, remember, the Army Corps of Engineers 18 which we'll get to, but that you argue is the 19 here is trying to hit a minimum of 5,000. They 19 right thing to look at. Correct? 20 don't want it to drop below 5,000 at all. So in 20 A. I mean, yeah. There are two sets of data here. 21 order to do that and in order to operate a large 21 There is provisional data, the type of data, if 22 22 reservoir gate operation, as they do, they you will, that the Army Corps of Engineers is 23 23 probably built in a safety factor here to make relying upon on a daily basis to make their 24 sure that they stay above 5,000 -- at or above. decisions. And then there's this other set of 24 25 And I agree with you; they didn't exactly hit 25 USGS data that I have been shown in my deposition THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3940 3942 1 and other places. Q. Sir, the demo that you're referring to is using 2 2 Q. Right. We'll -provisional data and not the actual reading from 3 A. That is data that has been adjusted after a 3 the Chattahoochee Gage. Correct? 4 period of time by the USGS. Well, let's back up. 5 Q. And we'll get to that, to the provisional data, 5 Q. What we're looking at here in table 4 is the 6 in a moment; but let me just, to help you out --6 actual readings from the USGS gage, not 7 because I think Dr. Shanahan put together a table 7 provisional data. 8 8 So it's apples and oranges. Okay. that's getting at what I was asking you about. 9 So if you can go to table 4 in Dr. Shanahan's 9 Q. Correct. 10 prefiled testimony, you will find that in your 10 A. That's fine. 11 binder at tab 33. And table 4 is found on 11 And we'll get into the provisional data issue. 12 page 32 of Dr. Shanahan's testimony. 12 But Dr. Shanahan felt it was appropriate to 13 Now, sir, do you recall that you reviewed a 13 look at the actual USGS gage reading. Okay? 14 very similar version of this table at your 14 A. That's fine. 15 deposition? 15 Q. Now, these state line releases above the 5,000 16 16 A. That could well be. There were lots of tables. cfs minimum are not consistent with your 17 Yes, I recall something like this. 17 assertion that during drought operation, the 18 18 **Q.** And you see that Dr. Shanahan in this table Apalachicola River will receive only 5,000 cfs 19 calculated the differences between actual 19 crossing the state line. Correct? 20 20 Α. observed flows at the Chattahoochee Gage and Well, again, that was an assertion that was made 21 21 minimum flows under the RIOP for the entire 2012 early on in my deposition back in day one of, I 22 22 guess, the May time period. And since that time, to 2013 drought operations period. Correct? 23 23 and especially for 2012 when I have gone back and A. He's created -- yes, I see that. And he's 24 24 created it in such a way that the last column looked carefully at this data, there are a whole 25 25 over there with the flow per day is showing up as period of -- you can just see it from my demo THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3941 3943 1 an average for that whole month, yes. 1 cross 1 where there are at least half a dozen 2 Q. All right. The average difference between what 2 spikes in there all through July and August and 3 was observed at the gage versus what you would 3 into September that are clearly related to flash 4 expect if it were just a minimum release under rainfall events coming through the system. 5 the RIOP. Correct? 5 So I went back and confirmed that, indeed. 6 A. Yes. 6 And these flash events are not subject to 7 Q. Okay. And do you see -- if we just focus on May 7 control by the Army Corps of Engineers, and 8 of 2012 through December of 2012 for the moment. 8 they're not subject to control by the RIOP 9 A. Yes 9 because these are occurring below the reservoirs 10 **Q.** So the last few months of -- last half of 2012. 10 below Bainbridge on the Flint River. And so 11 11 A. Right. this is a pass-through that comes on through 12 12 Q. And if you just look down that column on the the reservoir. And because it's a pass-through 13 13 right-hand side, you can see that on average the reservoir at Lake Seminole, they're just going to 14 releases ranged from 212 to 525 cfs per day above 14 move on through and then be recorded as increased 15 15 flows. the minimum release. Correct? 16 A. Yes. I see -- let me check something here. 16 Q. Sir, in your February 29 report you talked about 17 17 flash precipitation events like this. And you I think the table is wrong. 18 Q. Okay. I think your counsel can ask you about 18 said that the 5,000 cfs minimum or target, as you 19 that. I don't think we believe that the table is 19 called it, would remain -- I think you said this 20 20 is true even if basin inflow experiences wrona. 21 21 A. Well, if you just look at my exhibit demo short-term increases above 5,000 cfs such as 22 22 number cross 1 -during a flash precipitation event. 23 23 Q. Yes? Do you recall saying that? -- for the month of June 2012, you got an average 24 I did. And some of these are -- some of these 24 25 difference there of 525 cfs. 25 are bigger events. Some of these are day-long THE REPORTING GROUP THE REPORTING GROUP

Mason & Lockhart

Mason & Lockhart

3946 1 events with 3 inches of rain, as we went back and 1 would not go above 5,000 cfs for releases? 2 2 carefully looked at the rainfall events. So That's what you stated. Correct? 3 hydrology is a very dynamic science. 3 A. Well, it's -- it is their policy. However, they 4 4 And, in fact, in this regard, if you look at are also operating these reservoirs, as I said 5 that figure in demo cross 1 up in the top left, 5 earlier, to meet seven different project purposes 6 it really is quite close to 5,000 much of the 6 within the basin. One of those project purposes 7 time. And there are just these times where there 7 is flood control. 8 are rainfall events that come through that 8 Q. Okay. And, sir --9 elevate it. 9 Α. And, clearly, what's happening here in this time 10 Q. So, sir, these statements in your expert report 10 frame, especially in -- as we get into February 11 are no longer correct. Right? 11 and January, for that matter, there were large 12 A. They -- I didn't say that. They are shooting for 12 floods and large storms that moved through the 13 values near 5,000. And in what we just read from 13 system and refilled -- it refilled conservation 14 my prefiled testimony, I said at or near 5,000. 14 storage in some of the reservoirs; and it started 15 So I corrected that statement already. 15 to then impact flood storage. And when you get Q. Okay. Now, sir, let's focus on -- let's go back 16 16 into the flood zone, by definition the reservoirs 17 to table 4 from Dr. Shanahan that was tab 33, 17 have to be operated in such a way that they --18 page 32, I think. 18 they release that floodwater downstream. They 19 MS. WINE: Mr. Walton? 19 store a certain amount, and they release a 20 A. Okay. And now, you're asking me to use some sort 20 certain amount. So there are rules according to 21 of different dataset -- different dataset for --21 that. 22 22 from Dr. Shanahan's table. And you can see that in my demonstrative 23 **Q.** I'm asking you to look at Dr. Shanahan's table. 23 No. 7. **Q.** Sir, you know that the composite conservation 24 We'll get into the differences in the datasets. 24 25 A. Well, the difference --25 flood storage did not fill all the way back up THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3945 3947 Q. I understand. We'll get to the provisional data. 1 until after February of 2013. Right? 2 He used the gage data from the USGS, okay. 2 A. I do know that. Right. 3 3 Q. Okay. So this was not an issue where the And we're going to go look at table 4 again. reservoirs had filled all the way back up. 4 A. Okay. I'm there. 4 5 **Q.** I'm waiting to get it up on the screen. 5 Correct? A. They had not filled all the way back up; that is 6 6 We looked at the last six months of 2012 7 before. And what I want focus you on now is the 7 correct. 8 Q. Okay. winter refilling season. So that would be 8 9 December 2012 through February of 2013. 9 A. But there were obviously massive rainfalls within 10 10 MS. WINE: Mr. Walton, I believe that's the basin that were driving these flows. 11 on page 32 of this exhibit. 11 Q. Sir, you stated that until those reservoirs were 12 BY MS. WINE: 12 filled up, the Corps does not exit drought 13 13 Q. So now, focusing on this -- it's labeled winter operations; and it's still under the 5,000 14 refilling season. Do you see that? 14 minimum release. Correct? 15 A. Yes, I do. 15 A. Yes. But we can't just look at --16 **Q.** So, sir, not only are we now still in drought 16 Q. Sir, I just asked you if that was correct under 17 operations; but we're also in the winter 17 18 refilling season, which is another time that you 18 A. That is according to the rules, yes. But --19 say the 5,000 cfs will not be exceeded. Correct? 19 Q. And you can see here --20 A. That's a stated policy in the RIOP. And, of 20 Can I finish my question? 21 course, we all know that what happened during 21 **Q.** I just asked you if that was connect, sir. 22 this particular period of time -- and I have got 22 A. Can I finish my question? 23 23 to get --**Q.** I would just like you to answer my question. 24 **Q.** Sir, I just asked you if those were -- if that is 24 Α. I said yes. 25 another reason that you assert that the Corps 25 Q. You will have the opportunity --THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

TRIAL - November 29, 2016 (Vol. XV) Florida v. Georgia 3950 1 A. I said yes. However, clearly when you're going 1 Yes, I did say that. 2 from 400 to 3800 to 32,000, something else very 2 Q. Okay. And that wrong data is the official USGS 3 different is happening in the basin. And that 3 streamflow data recorded at the Chattahoochee 4 something else, during this particular time of 4 Gage on the Apalachicola River. Correct? 5 the year, was a major rainfall and a major flood 5 A. It is the official data that is adjusted after 6 moving across the basin. Once that moves 6 some period of time by the USGS. However, it is 7 anywhere upstream of Lake Seminole, it's going to 7 not the data on which the Army Corps of Engineers 8 come right on through Lake Seminole. And that's 8 makes its day-to-day decisions to operate this 9 how it operates. 9 basin. That starts with provisional data from 10 **Q.** Sir, are you saying that your statement that the 10 the USGS. And then by the end of the day, it is 11 Corps will remain in drought operations and will 11 adjusted by the Army Corps themselves; and it 12 retain the 5,000 minimum release until the 12 then becomes the Army Corps of Engineers release 13 reservoirs are filled back up and it exits 13 14 drought operations, that that statement is not 14 And they have to use that because they're 15 correct? 15 standing there at the dam, at the gates, watching 16 A. No. It's a correct statement. But in this 16 the outflow. And they're making day-to-day 17 particular situation where you have this level of 17 decisions. So they can't wait for the data to 18 18 flow coming through the system, it's obviously come back after it's been adjusted by the USGS. 19 flow related. 19 Q. So what you're saying in essence is that even 20 20 Q. Right. And the Corps released a lot more in each though the Corps did release above the 5,000 cfs 21 21 of these months. Correct? minimum, they didn't intend to do that? 22 22 A. I don't know whether they released a lot more. I A. They're basing -- they're basing their releases 23 23 haven't studied the reservoir operations from on their information that they have on a daily 24 flood control standpoint. But I do know that 24 basis as shown in my demonstratives 5 and 6, 25 25 which, as you will notice there, targets just there had to have been a lot of water moving THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3949 3951 1 through Lake Seminole to generate a differential 1 above 5,000. That's what they're making their of 32,000. 2 2 decisions based on. 3 3 **Q.** So if they released more than the 5,000 cfs MS. WINE: Your Honor, I'm about to 4 4 switch topics. Would this be a good time to minimum, they didn't intend to do that? 5 5 switch topics, or would you like me to keep They were doing it based on provisional data 6 6 going? that was presented to them that may have been 7 7 I'm happy to keep going if you're not telling them something different? 8 8 ready. Α. Well, first of all, they -- there's a minimum of 9 SPECIAL MASTER LANCASTER: Let's go a 9 5,000. That's a minimum. They're releasing just 10 10 above 5,000 because, again, there's quite a bit little longer. 11 of variability in that data, as you have shown 11 MS. WINE: This is good. We're going to 12 12 get into provisional data, which I know me, actually, in Bedient cross demonstrative 13 Dr. Bedient wants to talk about. 13 No. 1. There is quite a bit of up and down in 14 BY MS. WINE: 14 the data. They don't want any of those down dips 15 Q. So as we discussed, you contend that in table 4 15 to drop below 5,000 because they're trying to hit 16 and other analyses that Dr. Shanahan did, he has 16 that minimum. 17 relied on the, quote, wrong data. Correct? 17 Q. Okay. Let's look at this provisional data. 18 A. He has -- well, data is data. Now, there are 18 First of all, you had to get the data from 19 three different datasets here. So we can talk 19 Georgia EPD. Correct? 20 about those to the level that you would like to. 20 A. I -- let's see. Which -- you're calling this 21 21 **Q.** I just want to know if you recall saying in your provisional data. Are you talking about the 22 22 prefiled direct testimony at paragraph 161 that Corps data or the USGS data? 23 23 he relied on the wrong data. Do you recall Q. Well, tell me what you looked at and what you

saying that?

Oh, you mean for his analysis?

relied upon.

A. I looked at this Corps release data.

THE REPORTING GROUP

Mason & Lockhart

TRIAL - November 29, 2016 (Vol. XV) Florida v. Georgia 3954 Q. Okay. And the Corps release data itself comes 1 packet to Bedient cross demo 3. 2 from the USGS provisional data. Correct? 2 Α. Okay. I see it. 3 A. It comes from -- it's actually posted up on the 3 **Q.** And this is something that we just pulled from the USGS website. It says, provisional data 4 U.S. Army Corps website. It is something that 5 they compute themselves. The Army Corps of 5 statement. Do you see that, sir? 6 Engineers does it themselves at the end of each Α. Yes. 7 day. And that's what they make -- base their 7 And if you look at the first few paragraphs 8 decisions upon as they operate on a day-to-day 8 there, do you see that the USGS is saying that 9 9 the provisional data may be inaccurate? 10 Q. And they're getting it from the USGS provisional 10 A. Yes, I see that. 11 data? 11 **Q.** And that it's subject to significant revisions? 12 A. I think it starts there, and then they do some 12 Α. Yes. 13 adjustments to it by the end of the day based 13 Q. And, sir, if you turn to the next page in your 14 upon what happens to be going on in the basin. 14 demonstrative packet to Bedient cross demo 4, 15 **Q.** And you had to get this provisional data from 15 there is a provisional data disclaimer from the 16 Georgia EPD. Correct? 16 USGS. Do you see that? 17 A. I did. 17 A. Oh, yes. 18 **Q.** And that's because the provisional data doesn't 18 **Q.** And it says that the US -- it's in the paragraph 19 exist anymore on any public source? No public 19 starting, realtime data, which is the second 20 20 website; you can't find it on the USGS website or paragraph. 21 on the Corps website. Correct? 21 A. Right. 22 22 A. I don't know that you can't find it on the Corps Q. It says that the provisional data, which they 23 website. I mean, I have seen it up on the Army 23 have bolded here, may be subject to significant 24 Corps website back to maybe 2007. 24 change and is not citable. Do you see that? 25 Q. Okay. But you got it from Georgia EPD? 25 A. Yes, I see it. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3953 3955 A. I believe so. Just because we were working 1 Q. And it goes on to list another -- a number of 2 2 closely with them for data transfer. other warnings about the data. 3 Q. And it's no longer on the USGS website? 3 Now, sir, you didn't cite these disclaimers A. The data for the Chattahoochee Gage? 4 in your prefiled direct testimony. Correct? A. 5 Q. Provisional data, correct. 5 No, I did not. But then, again, this is data --6 A. That I don't know. 6 and because I run realtime flood warning systems, 7 Q. Okay. 7 and I rely upon provisional data all the time. 8 8 A. That I don't know. This is data that comes in on a day-to-day basis. 9 Q. You weren't able to independently verify the 9 And decisions are being made on a day-to-day 10 provisional data that you got from Georgia EPD; 10 basis in this system. 11 11 were you? And if the Army Corps of Engineers were to wait for the USGS to finish their adjustments to 12 A. I relied upon it. That is the official data used 12 13 13 data, which can take weeks or months, then we're by the Army Corps of Engineers to operate the 14 system. I assumed that if it came from Georgia 14 going to have a real problem operating the system 15 EPD, they have a vested interest in that data. 15 on a realtime basis. 16 They download it each and every day as I -- or at 16 Sir, all I asked was whether you referenced these 17 least once a week, as I understand it. 17 disclaimers in your prefiled direct testimony? 18 Q. You just took it at face value? 18 Α. No, I did not. 19 19 A. I did. Q. Okay. Now, sir, you're aware from Dr. Zeng's 20 20 Q. Okay. Now, are you aware of the various examination that in any event, we identified a 21 21 disclaimers that the USGS has issued with regard series of errors in this provisional data that 22 22 Georgia EPD provided to you. Correct? to this provisional data?

> THE REPORTING GROUP Mason & Lockhart

A. There are all sorts of caveats that come along

Q. Okay. If you could turn in your demonstrative

with USGS data.

23 24

25

23

24

25

A. Yes, I have seen that.

And do you recall we presented him with a

Mason & Lockhart

demonstrative identifying some of those errors?

THE REPORTING GROUP

TRIAL - November 29, 2016 (Vol. XV) Florida v. Georgia 3958 A. I have seen those. A. No, it's not -- there is no paragraph 50 on page Q. Okay. And we don't have to walk through them 2 70. 2 3 all. They were shown with Dr. Zeng. But they 3 Q. All right. are in your packet at Bedient cross demo 5. And A. That's wrong. 4 5 it shows a number of missing records from that Q. Hang on. 6 data? 6 I'm sorry. Page 27. 7 A. It does. And that's fairly typical for 7 Okay. 8 provisional data. **Q.** I have got a little typo here. 9 However, for 2011 and 2012 it seemed to 9 A. No problem. No problem. 10 provide a fairly -- a fairly complete dataset. 10 **Q.** Sorry about that. Thanks for correcting me. 11 **Q.** Can you explain how these errors occurred, sir? 11 A. No problem. 12 A. Oh, there's a variety of ways that -- I have got 12 Q. Here we go. 13 a lot of familiarity with USGS gages because I 13 A. Okay. 14 have helped put them in. You can get power 14 Q. Do you see that reference to GX-949 at the end of 15 failures. You can get maintenance issues. You 15 paragraph 50? 16 16 can get clogging. You can get destruction of the A. Yes, I see it. 17 gage for some period of time. There are all 17 **Q.** Right at the bottom there. 18 18 sorts of reasons that they go down. So I don't imagine you know offhand what 19 **Q.** So are you aware of whether there are any other 19 GX-949 is based on that moniker? 20 20 errors in that provisional data dataset that you A. No, I don't. 21 were provided that we didn't happen to find? 21 **Q.** Okay. So we were trying to figure it out A. No. 22 22 ourselves, so what we have done is a spreadsheet. 23 **Q.** How would you know whether that dataset is 23 It's just a slip sheet in your tab that we're 24 accurate or not? 24 going to pull up a portion of GX-949 to see if 25 A. Again, I relied upon EPD, who was in 25 you can help us understand where this data came THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3957 3959 1

1 communication with the Army Corps, to provide 2 that to me; and I just relied upon that dataset. 3 **Q.** Now, sir, in addition to that provisional data 4 that Georgia EPD provided to you, you also cite 5

another dataset that I want to ask you about.

6 A. Sure.

7 **Q.** So if you turn to your prefiled direct testimony 8 on page 70 --

9 A. Okay.

Q. -- you will see that you have a demonstrative 10 11 there. It's labeled demo 13.

12 A. Yes.

13 Q. And I just want to ask you. The -- in 14 paragraph 50 the source cited is GX-949.

15 Correct?

A. It is --16

20

17 Q. Do you see right there in paragraph 50 it says, 18 Bedient demo 13 is a true and accurate copy of

19 the results of my analysis of RIOP flow

thresholds and basin inflow for 2007. And it

21 says --

A. Excuse me. What page are we on? 22

23 Q. We're on page 70, I believe.

24 Let me just make sure that's the right page.

25 It's paragraph 50, for sure.

> THE REPORTING GROUP Mason & Lockhart

from.

2

3

4

And, actually, we have got a demo. These guys are way ahead of me.

Let's turn to cross demo 6-1.

5 A. All right.

6 **Q.** So this is just a picture -- we put it on the 7 screen, too -- of just a portion of the GX-949 8 data worksheet.

9 A. Yes.

Q. And I'll represent to you that you have a bunch 10 11 of worksheets in this file?

12 A. Right.

13 Q. But we pulled out this one that says data. And 14 it looks like it identifies Woodruff Outflow

15 Data. Do you see that?

A. Yes. 16

17 Q. Sir, do you -- based on looking at this, do you 18 know what GX-949 is?

A. I don't; but I suspect -- well, I know that this 19 came to us from the Georgia EPD. 20

21 **Q.** It looks like the provisional data that Georgia

22 EPD provided you. Correct?

23 A. But I don't know that for a fact. And this was 24 also the same plot that was in my very first 25 expert report dated in February.

Florida v. Georgia 3964 3966 1 Correct? A. Yes. A lot of time they hovered around the 5050 2 A. That's correct. That's how it works. 2 mark; and then there were some -- there were some 3 Q. Now, let's take a look at some of the ResSim 3 increases in there as well. modeling results that you produced in support of 4 **Q.** There are several times that they go above 5600 5 your expert report. And if you could turn to 5 cfs. Correct? 6 Bedient cross demo 9 in your packet. 6 Α. Yes. Right. 7 Α. Okay. 7 And cumulatively, if we add up these differences 8 Q. Now, what we have done here is you had an Excel 8 for this time period, the observed state line 9 worksheet in your production, the -- sort of the 9 flows exceeded your ResSim model flows by nearly definition of it is at the top of Bedient cross 10 10 63,000 cfs? 11 demo 9. And in this worksheet you included the 11 Α. For this specific period, yes. I'll agree. 12 results from a scenario that you modeled in 12 Okay. Now, in other words, ResSim predicted that 13 ResSim where Georgia reduces both its M & I and 13 if there were a 30 percent reduction in 14 Ag consumption by 30 percent. Correct? 14 consumption, the state line flows would have been 15 A. Right. 15 63,000 cfs lower during this period than they 16 **Q.** Okay. And the worksheet indicates what the state 16 actually were without any reductions in 17 line flows would be under this scenario for every 17 consumption. Correct? 18 day between January 1 of 1975 and December 31 of 18 Α. Well, again, during this particular period, I 19 2011. We only have an excerpt here, but do you 19 think, in 2011 there were some -- I think it was 20 20 recall that your worksheet went all the way back either rainfall related or there were some other 21 21 to 1975? issues that were causing this -- this movement 22 22 away from the 5,000, as we have seen also in A. Yes. So you're just showing me an excerpt 23 23 from --2012. 24 **Q.** From that worksheet. 24 Q. Right. But, sir, your ResSim model predicted a 25 A. -- 2011 and --25 substantially lower flow during this time period THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3965 3967 Q. Correct. 1 than the actual observed flows show? A. -- forward? 2 Α. For that particular period it did. However, we 3 **Q.** What we have done here is excerpted August 1, 3 have run the ResSim model over a longer period of 2011, to December 27, 2011. 4 time to get a -- to get a kind of a better 5 5 A. Yes. representation of how the model works. We ran it 6 **Q.** Do you see that? 6 from 2008 through 2011, and not -- not with 7 7 A. I see it; right. consumption caps, but just to see how the model 8 Q. And based on this 30 percent reduction scenario, 8 would compare against measured data. And we did 9 9 that, you know, fairly recently as part of this for every single day in this time period you have 10 10 that the state line flows would remain at exactly prefiled. And that's indicated in my 11 5050 cfs. Correct? 11 demonstrative 17. 12 12 A. Correct. Right. Q. Now, sir, 2011 was a drought year. Correct? 13 13 Q. Okay. Now, let's look at how these modeled Α. 2011 was not a drought year. 14 results compare with the flows that were actually 14 Q. 2011 was not a drought year? 15 15 It was not a -- they had not moved into drought observed at the Chattahoochee Gage on the Α. 16 Apalachicola River. Okay? 16 operations. 17 So if you could turn now to cross demo 10. 17 Q. Okay. Was it a year of low flows? 18 A. Okey-doke. 18 Α. Oh, yes. Absolutely. Yes. 19 **Q.** What we have done here is actually plotted the 19 Q. Now, sir, in addition to the limitation of ResSim 20 observed state line flows for the same time 20 and that it's not able to program the greater 21 periods in blue. Do you see that? 21 than sign on the greater than or equal to 5,000 22 22 A. Yes. cfs, your ResSim modeling also relied on the 23 Q. And do you see that the observed flows during 23 Corps' unimpaired flow numbers, their UIF's. 24 this period were always higher than 5,000 cfs, 24 Correct? 25 sometimes substantially so? 25 A. It did. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3968 3970 Q. And you took those Army Corps UIF's at face 1 Neither one of them, neither one of the authors 2 2 value; didn't you? had a problem with the approach. We went -- I 3 Α. We did. 3 mean -- and, again, the Army Corps of Engineers **Q.** You didn't evaluate the quality of those UIF's? in this particular basin both operates the basin, 5 A. No. This was the same UIF's used by the State of manages the basin. And they ought to be the ones 6 Georgia. They had been reviewed by them. And 6 that best understand how that model works and how 7 the Army Corps of Engineers uses these UIF's to 7 those UIF's need to be determined. 8 make all of their runs with ResSim for the ACF 8 And you know that Georgia Tech concluded that the 9 Basin. 9 UIF dataset included both random and systematic 10 Q. And as you just said, the UIF's are actually 10 errors. Correct? 11 dependent on consumptive use data provided by 11 Right. For their express purpose that they 12 Georgia. Correct? 12 were -- that they were doing the analysis. 13 A. No. The UIF's are based upon -- yes. I mean, 13 **Q.** We'll get to the purpose, sir. I promise. 14 they have to go back and subtract those out; so I 14 But for now, I just want to test your 15 guess that's true. 15 recollection about that UIF report. Q. Right. They get the consumptive use data from 16 16 And it found that those systematic errors 17 17 Georgia? affect both the long-term and daily flow 18 calculations. Correct? 18 A. Yes, they do. 19 Q. All right. Now, I know you were here when 19 Α. Correct. 20 20 Dr. Zeng testified. Were you also here when Q. And that many of the errors are related to 21 21 Mr. Masters testified? agricultural demand, including groundwater 22 22 A. I was not, no. pumping. Correct? 23 Q. Okay. Well, they were both asked questions --23 I believe that was correct. 24 24 **Q.** And that many of the errors related to the fact but obviously you will only remember Dr. Zeng --25 about some of the errors in the Corps' UIF's. Do 25 that evaporation from farm ponds and other THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3969 3971 1 you recall that questioning? 1 impoundments was not accounted for. Correct? 2 A. Yes. I'm familiar with that line of questioning. 2 Α. Well, they made that -- they made that statement. 3 3 I am. But, again, Army Corps of Engineers and others, Q. And you're aware of the criticisms that GWRI or 4 4 including the State of Georgia, feel that the 5 5 Georgia Tech will sometimes refer to it as levied whole issue of small pond impoundment and the 6 in its UIF assessment report? 6 evaluation of evaporation by itself without 7 7 You were aware of that before you filed your consideration of size of pond and infiltration 8 8 prefiled direct testimony. Correct? is -- is a very difficult and complex thing to 9 A. I'm aware of it, yes. 9 compute and certainly highly inaccurate. 10 Q. And were you aware of it before you submitted 10 Q. Sir, do you recall that Georgia Tech said that 11 11 your expert reports? the error from that issue alone can be up to 1200 12 12 A. I don't know. It seems like I saw the document cfs. Correct? 13 13 A. I recall that. early on. But one of the -- there are criticisms Q. And that the systematic errors in the dataset 14 there. However, the two gentlemen that authored 14 15 that report also clearly stated that for the 15 create a false assurance regarding the amount of 16 express purpose that ResSim is used in this basin 16 water available during periods of drought? 17 for -- especially for comparative analysis on 17 A. Right. Yes. 18 consumptive use, the UIF's are perfectly 18 Q. Okay. And, sir, if we could, you will find the 19 19 acceptable. UIF report at tab 21 of your binder. And I want 20 20 Q. We'll get into that; but, sir, you did not alert to turn to the page marked with a little Roman 21 21 the Court to any of the Georgia Tech critiques of numeral iv -- I think it's actually the fourth 22 22 the UIF dataset. Did you? page of the document. This is Exhibit FX-534. 23 23 A. No. Once -- once they basically said that for Α. Okay. 24 the express application that we're using the 24 Sir, are you at the page that says Executive 25 model for, they had no particular problem. 25 Summary? 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	A. Q. A. Q. A.	again, they also went on to say that for the purposes that the UIF's are being used by the Army Corps of Engineers and by the State of Georgia for this application especially, comparing consumptive use scenarios, it's they're perfectly acceptable. Sir, can you stick to the executive summary and look at the second to last full paragraph on that same page that begins, the overarching study. Yes. Do you see that? Yes. The next sentence that begins, such improvements, can you read that and the next two sentences to yourself. I see it. And, sir, do you see there that Georgia Tech is warning that the problems with the UIF's are particularly critical with daily time steps. Do you see that? Yes. And that they concluded that these errors undermine the results of ResSim and other river basin simulation models operating on daily time	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	Α.	document from Georgia Tech also said. And, as a matter of fact, we have taken this model for the period of time 2008 to 2011 and run a careful analysis against measured values. And the ResSim model actually matched beautifully with a correlation essentially of .96 which says that the model, indeed, with its current UIF's in place is an accurate tool. It's the tool relied upon by the Army Corps of Engineers for operating this basin. It's also the tool recommended by the Hydrologic Engineering Center Army Corps of Engineers research group. They assessed the model for three years before they selected it and applied it to the basin. So it's a fine tool. Sir, do you agree that the Service says that ResSim in the excuse me. That the service said that the UIF dataset should not be used as a predictive model? I see that. And we actually ran a test between '08 and '11 and found it to be an excellent predictive tool. Right. You used it as a predictive model. That's what you said in your prefiled direct
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	A. Q. A. Q. The numbers are in the box on the bottom of the page Thanks yes, in the light gray. In the light gray. So I have to get three layers of glasses. All right. 124, you said? Correct. Okay. The heading on that page says, Unimpaired flow uncertainty implications for Yes FWMP? Yes.

3982 1 begins, since unimpaired flows, do you see that? A. Okay. Now, I'm with you. 2 A. Right. 2 Which for the record is FX-883. 3 **Q.** It's in the second paragraph under the (i), (ii), 3 Α. Riaht. 4 (iii), and (iv). Can you just read that to Q. And, sir, if you look in the third paragraph that 5 yourself, sir. 5 begins, although questions have been raised. 6 A. I see that. 6 Α. Right. 7 Q. And, sir, do you see there that Georgia Tech is 7 If you could read that, sir, just to -- the first 8 actually warning that use of the unimpaired flows 8 two sentences there, to yourself. 9 and all of their uncertainty can actually be 9 Α. Okay. 10 passed on in modeling and impact even when you're 10 Q. And you will see that they cited time and funding 11 doing a relative comparison of various water 11 constraints for why they couldn't fix the errors 12 management alternatives. Correct? 12 in the UIF --13 A. I see that. However, again, I have already 13 A. Yes. 14 stated the model has been run in a predictive 14 Q. -- dataset? 15 mode against the period 2008 to 2011 and found to 15 They agreed to go forward anyway, but 16 16 be highly accurate. And, therefore, while this recognized that they could not truly assess the 17 might apply to sort of specific applications that 17 environmental impacts and benefits associated 18 18 Georgia Tech had in mind, for this ACF Basin and with various water management alternatives. 19 what we're doing here in the modeling, I think 19 Correct? 20 20 it's the preferred tool. A. Let me just check something here. 21 21 **Q.** Sir, are you aware of the ACFS Stakeholders Yes. I see that. But, once again, the model 22 22 Group? has been tested; and it has been proven already 23 23 for the years 2008 to 2011 to be accurate with A. Iam. 24 **Q.** And have you reviewed the document they produced 24 the UIF's that are contained therein. 25 called the Sustainable Water Management Plan? 25 Q. Sir, did you do anything to attempt to refine or THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3981 3983 A. I have seen the cover, and I think I have 1 improve the Corps' UIF's before conducting your 2 2 probably read the executive summary. own ResSim modeling? **Q.** It's at tab 22, if you want to refer to it. 3 3 Α. No, I did not. 4 A. Okay. 4 Q. Still not enough time and money to do that? 5 Q. You know that after reviewing Georgia Tech's 5 Well, we tested the model from 2008 to 2011. And criticism of the UIF's, the ACF Stakeholders 6 6 that is actually one way of evaluating the 7 7 Group decided to use the UIF's and ResSim accuracy or the relative accuracy of UIF's. Q. But you --8 modeling anyway. Correct? 8 9 A. Yes, I do know that. 9 Α. Since the model produced a correlation, kind of a 10 **Q.** And they acknowledged the errors and omissions in 10 coefficient of about .96 over that time period, 11 11 the UIF dataset. Correct? that implies to me that the model is perfectly 12 A. Yes. 12 acceptable for this application. 13 13 Q. And you know that Georgia Tech suggested some **Q.** Do you recall they called it an artificial 14 dataset? 14 very specific improvements to the UIF dataset. 15 A. Wouldn't surprise me. 15 Correct? 16 **Q.** And they said that it needed to be improved as 16 Under their specific sort of set of objectives 17 soon as possible? 17 they did, yes. 18 A. It would not surprise me. 18 Q. And if you could just turn back to that one more 19 Q. Okay. And if we could turn to page 128 in 19 time, tab 21. 20 tab 22, I think it's at the very end of that 20 Α. Sure. 21 document. 21 Page, I believe, 193. 22 A. Okay. All right. 22 Α. Okay. 193? 23 23 **Q.** Or almost the very end. Q. Correct. 193. A. Almost the very end of your --24 24 Α. Okay. Q. Yes. Page 128 in tab 22. 25 And you see under the section Recommendations THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3986 1 they first suggest some recommendations to fix 1 They ran rainfall runoff models in order to 2 the monthly UIF's. And then as you go onto the 2 compare against measured flows in order to back 3 next page, they say, thereafter, there can be an 3 out, if you will, consumptive use values. 4 attempt made to try to fix the daily UIF's. Do 4 Q. Right. So they ran these models --5 you see that? Dr. Hornberger used the P R M S or PRMS model. 6 A. Oh, yes. Oh, yes. 6 Correct? 7 Q. And did you know that Georgia Tech concluded that 7 Α. 8 even if the UIF's were revised per their 8 **Q.** And Dr. Lettenmaier used the VIC model? 9 suggestions, it would still be challenging in a 9 Yes, I'm aware of that. 10 couple instances. And those are -- if you look 10 **Q.** Okay. And that was a way for the two of them to 11 at the bottom paragraph on page 193, there's a 11 deal with the challenges noted here by Georgia 12 sentence right in the middle that says, the two 12 Tech. Correct? 13 challenging improvements relate to the effect of. 13 A. Well, but also Dr. Hornberger himself ran the 14 Do you see that sentence? 14 ResSim model as well. So he ran a -- I mean, he 15 A. At the bottom of 193? 15 ran the ResSim models and with a -- you know, 16 **Q.** Yes. In the last full paragraph on that page. 16 with his own calculations on unimpaired flow. 17 17 And there is a sentence in the middle there or But he did run his own with the ResSim model. about a third of the way down --18 **Q.** He did a variety of modeling. He realized some 18 19 A. Yes. 19 of the challenges with ResSim. And one of the 20 20 things he did was to run a rainfall runoff model. With the exception of two errors, yes. 21 Q. Correct. 21 Correct? 22 Could you just read that to the end of the 22 A. Yes. 23 paragraph. 23 Q. All right. Now, sir, before we leave this topic, A. Right. I see it. 24 24 just coming back to farm ponds for a moment, have 25 Q. All right. So Georgia Tech says that the two 25 you seen the assessment that Georgia EPD did of THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3985 3987 1 challenges that would remain are, one, 1 the consumptive use impact of evaporation from 2 2 human-induced groundwater changes. farm ponds? 3 A. Yes. 3 A. I have not seen it in detail, no. 4 Q. And then the small and medium-sized impoundments, 4 Q. All right. You recall Dr. Zeng testified that 5 the farm ponds. These are the same two issues we 5 such an assessment existed. Correct? A. I think I remember that, yes. 6 talked about earlier. Correct? 6 7 A. They are. 7 **Q.** And it was withheld from Florida as privileged? 8 **Q.** And do you see that in light of these persistent 8 A. Say it again? 9 challenges, Georgia Tech concluded that the way 9 **Q.** It was withheld from Florida as privileged? 10 to deal with it is to run rainfall runoff models. A. Oh, that -- I did not remember that. 10 11 11 Correct? Q. Okay. But you haven't seen it? 12 A. Yes. 12 A. No. 13 Q. And they said that rainfall runoff models could 13 Q. Okay, sir. I want to switch topics one more 14 be developed to provide a realistic assessment of 14 15 the collective groundwater and impoundment 15 Sir, in addition to theorizing that any water 16 impacts. Do you see that? 16 saved by reductions in Georgia's consumption 17 A. Yes. If -- if you had, again, the time and the 17 would not flow down to Florida, you also suggest 18 money to do that. 18 that any cuts in consumptive use by Georgia would 19 **Q.** Well, sir, are you familiar with the work that 19 not be meaningful in any event because Georgia's Dr. Lettenmaier and Dr. Hornberger did in this 20 20 water use represents a relatively small 21 case? 21 percentage of streamflow entering Florida. 22 22 23 **Q.** And you know that they ran rainfall runoff models 23 A. Well, it's -- you're talking about at the state 24 for precisely this purpose? 24 line; and you're talking about mostly under 25 A. Well, I don't know about precisely this purpose. 25 drought conditions. The situation is that THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3990 1 basically the offset kind of kicks into place. 1 relationship between Georgia's average monthly 2 2 If you have consumptive use coming -- let's say, consumptive use for the months of May through 3 you know, increased flows coming down the Flint, 3 September with average state line flows during 4 and the offset sort of kicks into place, and the those same months. Correct? 5 reservoirs were then used to store an equivalent 5 Α. Right. 6 amount of that flow on the Chattahoochee side. 6 **Q.** And as you point out, water is in its greatest 7 That's how they operate the system. 7 demand from May to September. Correct? A. Oh, yes. 8 **Q.** Sir, if you could turn to your prefiled direct 8 9 testimony at page 44. 9 And Georgia's consumptive use is highest during 10 A. Okay. 10 the months of July and August. Correct? 11 Q. Paragraph 94. 11 A. That's correct. 12 A. Yes. 12 **Q.** The caption below your demo 28 has the years 1980 13 **Q.** Actually, just above that, while you're getting 13 to 2013. Do you see that? 14 there --14 A. Yes. 15 A. Sure. 15 **Q.** And this indicates that the demo is plotting 16 16 **Q.** -- there is a main heading in the middle of that Georgia's consumptive use data and state line 17 17 page. Do you see that it says -flow data for all of the years between 1980 and 2013? A. Yes. 18 18 19 Q. -- Georgia's water use will not have a 19 A. Yes. 20 20 significant impact on state line flows? Q. In other words, demo 28 is including average 21 21 monthly consumptive uses and state line flow data A. Right. 22 22 **Q.** And then at paragraph 94 you say, Georgia's water during all years in that time period, including 23 use represents a relatively small percentage of 23 normal and wet years. Correct? 24 24 streamflow entering Florida? A. It is. It's the whole -- it's the whole 25 A. Yes. 25 sequence, yes. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3989 3991 Q. Now, to support your assertion that cuts in Q. So I would like to turn your attention back to 2 2 consumptive use would not be meaningful, you your demonstrative packet. 3 compared Georgia's consumptive use values with Α. 3 Okay. 4 state line flows measured at the Chattahoochee Q. And if you could find Bedient cross demo 11. 5 Gage. Correct? 5 A. All right. No. 11. I'm there. 6 A. Right. 6 Q. Now, what we have done here is focus on 2011, 7 **Q.** And if we could turn to your prefiled direct 7 which I think you agreed with me earlier that it 8 8 testimony to page 46, demo 28. was at least a dry year, if not quite yet 9 A. Okay. 9 declared a drought year? 10 10 Q. Are you there? A. Yes, it was definitely a low flow year. 11 11 A. Yes. Q. Okay. And do you see that, like your demo 28, 12 Q. And just so we're all clear, when you refer to 12 what we did in Bedient cross demo 11 is to 13 13 consumptive use throughout your testimony and in compare state line flows in Georgia's consumptive 14 this demo, you're using the term in the same way 14 use on an average monthly basis? 15 that Dr. Zeng uses it, meaning the total amount 15 A. Yes. 16 of surface water reduction or streamflow 16 Q. Okay. But this Bedient cross demo 11 is only 17 depletion resulting from Georgia's water use. 17 looking at 2011? 18 Correct? 18 A. Correct. 19 A. Yes. The sum of M & I and Ag use. And it was 19 Q. Okay. Now, do you see that during the summer 20 20 basically provided to me from the State of months of this year, Georgia's consumptive use 21 21 Georgia and other experts, yes. came much closer to approaching average monthly 22 Q. Right. You actually relied on the consumptive 22 state line flows than in your demo 28? 23 use data that Georgia provided to you? 23 A. Yes. I mean, you're plotting something A. I did, yes. 24 completely different here. 24 Q. Okay. Now, in demo 28 you focus on the 25 Yes, it's a true and accurate plot. I don't THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3994 3992 1 disagree with it at all. 1 have plotted the ratio of average monthly **Q.** And do you see that the average monthly 2 2 consumptive use for 2011 versus observed state 3 streamflow depletion value for August 2011 was 3 line flow at the Chattahoochee Gage for the same 1,777 cfs? 4 year. Do you see that? 5 A. Yes. Close to 1800, yes. 5 Α. Sure. **Q.** And that the average monthly state line flow for 6 **Q.** And we were just talking about the ratio of 7 that month was 5,484 cfs? 7 August, which is 32 percent. Do you see that in 8 A. Yes. 8 July and August, the months when you acknowledge 9 Q. And I'll represent that if you divide those 9 that Georgia's consumptive use is at its highest 10 numbers, it comes out to 32 percent. Does that 10 percentage of Georgia's consumptive use as 11 sound right? 11 compared to state line flow, is 27 percent and 12 A. Sure. I'll buy that. 12 then 32 percent respectively? 13 **Q.** Do you recall that in your written testimony, you 13 Α. Sure. But, again, during all of this time period 14 say that even when water is in its highest 14 in 2011, the -- you know, there's a lot of 15 demand, Georgia's consumptive water use still 15 augmentation going on at this time. And so the 16 16 represents a small percentage of water as system is being operated to shoot for or to at 17 17 compared to the amount of streamflow that crosses least hit the minimum of 5,000. And all other 18 the state line? 18 water, to the extent possible, is going back to 19 A. Well, that's a general statement. When I made 19 refill those reservoirs. 20 20 Q. So, sir, at least for this time period your that statement, I wasn't necessarily talking 21 about 2011. 21 statement that Georgia's total consumptive water 22 22 And, you know, if you plot 2011, yes, that's use still represents a small percentage of water 23 kind of a worst case. And, actually, 2011 is the 23 as compared to the amount of streamflow that 24 24 year that we selected to do all of our baseline crosses the straight line -- state line is not 25 runs against because of its -- because of the 25 true. Correct? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3993 3995 1 extreme nature of that year. 1 A. Well, that statement, again, was made in a 2 2 **Q.** Sir, if you could, just turn to your prefiled general sense for average years. This is 3 3 direct testimony at page 46 -obviously an extreme year. And it is a high A. Okay. percentage, I'll absolutely agree with. 4 4 5 Q. So we don't need to belabor it with the Court, 5 **Q.** -- paragraph 97. 6 A. All right. 6 but if you look at the next two demos in your 7 Q. And you will see at the end of that paragraph, 7 packet, 13 and 14 --A. 8 sir, the statement that I just stated for 8 Sure. 9 9 Q. -- you have done the same thing for 2012, sir. the Court when you said Georgia's total 10 10 consumptive -- sorry. Even when water is in its Would you agree that, once again, the ratios are 11 11 greatest demand, Georgia's total consumptive much higher than what you present in the demo in 12 water use still represents a, quote, small 12 your direct testimony? 13 13 A. The ratios are higher. And, of course, 2012 is percentage of water as compared to the amount of 14 streamflow that crosses the state line. 14 the back-to-back drought that came right after 15 Do you see that, sir? 15 2011. And, yet, you will also notice that with 16 A. Yes. 16 respect to the way that the Corps is operating 17 Q. Okay. 32 percent is not a, quote, small 17 the system, they are meeting the minimum 5,000 18 percentage; is it? 18 cfs as required under the RIOP. 19 A. Not for that one particular data point that you 19 **Q.** And, sir, you realize that these charts are all 20 20 have selected. But this statement is with using Georgia's consumptive use numbers. 21 Correct? respect to this general graph that's on page 46. 21 22 Q. Now, sir, if you turn to cross demo 12, which is 22 23 23 Q. And that Florida at least believes that Georgia the next page. A. All right. 24 has underestimated its consumptive use. Correct? **Q.** You will see what we have done here is that we 25 A. I'm aware of that, yes. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3996 3998 1 Q. Pretty substantially, according to Florida's 1 the state line. And we did this detailed 2 2 experts. Correct? analysis for the whole year. And the results 3 Α. Yes. 3 were that for 307 days out of that year Florida 4 Q. And I know you won't agree with that, but would would receive no additional state line flow, and 5 you at least agree that to the extent Georgia's for only 49 total days during the year would they 6 consumptive use values are underestimated, 6 receive the full benefit of that flow. And that 7 Georgia's consumptive use will represent an even 7 would typically not be during the low flow months 8 8 larger percentage of the state line flows than is of the summer. 9 shown on these cross demonstratives? 9 Q. And what do you attribute -- that 307 days when 10 A. Well, I think based on everything that I have 10 Florida would receive no additional state line 11 looked at -- and, again, I have to rely upon 11 flow, what do you attribute that to? 12 consumptive use being provided to me; but based 12 A. That basically -- I attribute that to, first of 13 on the analyses and the discussions that I have 13 all, they're in drought operations in 2012. And 14 had with team members, I would think that -- that 14 this is a scenario where they have -- they're 15 those are pretty accurate numbers coming from the 15 following the RIOP; and they have gone into 16 16 State of Georgia. And I -drought operations. They're augmenting flows. 17 **Q.** Sir --17 They're meeting the 5,000 minimum, and that's it. 18 A. -- think they're more accurate than what's being 18 In other words, they're augmenting the flows. 19 provided and being estimated by Florida experts. 19 And other excess flows that come through are put 20 20 Q. I appreciate that. I didn't ask you if you back into storage in the reservoirs. Q. 21 21 agreed that they weren't accurate. I just asked Now, on cross-examination you talked a little bit 22 22 if you would at least agree that to the extent about your modeling. Did you model the impact of 23 23 those consumptive use values are underestimated, both increases in Georgia's consumptive use on 24 Georgia's consumptive use would represent an even 24 state line flows and decreases in Georgia's 25 larger percentage of these state line flows. 25 consumptive use on state line flows? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 3997 3999 1 Correct? A. Yes. I looked at both. 2 A. I'll agree with that. 2 Q. Okay. And which model did you use? 3 A. I used the HEC ResSim model that was provided. **Q.** All right. Thank you. 3 4 MS. WINE: I have no further questions. 4 And, again, it's basically the Army Corps of 5 5 SPECIAL MASTER LANCASTER: Redirect? Engineers' model with input data in there from 6 MS. ALLON: Yes. Thank you, your Honor. 6 the State of Georgia. 7 REDIRECT EXAMINATION 7 **Q.** And before we get into the results of your 8 8 BY MS. ALLON: modeling, I just want to briefly discuss, because 9 Q. Dr. Bedient, I want to start by talking about 9 it came up cross-examination, the issue of the 10 10 UIF's. your opinion that reducing Georgia's water use 11 11 would not typically lead to increases in state MS. ALLON: Your Honor, may I hand up a 12 12 line flows during dry and drought conditions. So demonstrative? 13 13 SPECIAL MASTER LANCASTER: Please. if you could turn to page 29 of your direct 14 testimony. And I specifically want to look at 14 BY MS. ALLON: 15 15 Q. Now, during cross-examination you mentioned that paragraph 56. 16 Does paragraph 56 report the results of an 16 you had seen some testimony from the authors of 17 analysis that you did in support of that 17 the GWRI report that discussed when those authors 18 conclusion? 18 themselves thought the UIF -- the use of UIF's 19 A. Yes. 19 was appropriate. And if you look at the 20 Q. Okay. And could you describe the analysis that 20 demonstrative that I just handed out, is this the 21 21 you did? testimony that you were referring to? 22 22 A. Sure. We basically -- for the year 2012 we A. Yes, it is. 23 23 essentially did a counting. We counted up how Q. And could you just describe -- you don't have to 24 many days Florida would be expected to receive 24 read through it; but could you describe at a 25 either additional water or no additional water at 25 general level what your understanding of that THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

3

13

1 testimony is. 2 A. Yes. This is essentially what I was referring 3 to. Both Dr. Kistenmacher and Dr. Georgakakos 4 from Georgia Tech are referring to their report; 5 and they're basically saying that for comparison 6 scenarios, in other words, if that's where you're 7 running these scenarios to compare, for example, 8 consumptive use caps or increases in whatever, 9 you were doing that type of analysis, the 10 magnitude and the results of these issues that

11 they came up with really are no longer an issue. 12 **Q.** And did you do anything yourself to test the 13 ability of the ResSim model to accurately 14 reproduce reservoir operations in the ACF Basin?

15 A. Yes, I did.

16 Q. And what did you do?

17 A. Basically ran the model -- I mean, put it through 18 a severe test between 2008 and 2011. So that 19 basically includes a really serious drought year 20 of 2011. And it runs with the RIOP rules in 21 place. And so we ran that model over that period 22 of time and found the comparison to measured 23 flows coming out of Woodruff Dam to be excellent.

24 Q. Now, with respect to the modeling that you did 25 using ResSim, can you just provides the Court THE REPORTING GROUP

Mason & Lockhart

4001

1 with a general overview of how you isolated the 2 impact of consumptive use.

3 A. Yes. You're basically asking me kind of how I 4 ran the model?

5 Q. Right.

A. So the ResSim model is this complex beast that has rivers, the Flint, the Chattahoochee, and reservoirs contained therein. And so all of those rules that the reservoirs are operated under, all those rules are contained within the computer model. And then what we do is we get rid of all the human influences to generate the unimpaired flows.

So unimpaired flows are sort of like Mother Nature's flows from the original days back 100 years ago. All right. That's the unimpaired flow. So that is sort of how you start the model. Then you start putting in consumptive uses. And you put in all sorts of withdrawals and all of that. So the human influences are added back into the model.

So if I want to look at consumptive use changes, let's say by 30 percent, I would take a baseline run. And the baseline run we used was the year 2011. And then I would simply cut

THE REPORTING GROUP

Mason & Lockhart

consumptive use -- I would cap it or cut it by 30 percent, put that in, make those two runs, and then compare the results at the state line.

So that's what we did. And we did that 19 5 different times with 19 different scenarios.

6 Q. And I want to talk about both sets of modeling 7 that you did, decreases in consumptive use and 8 increases in consumptive use.

9 Α. Both, yes.

10 Q. Let's start with decreases.

11 Α. Okay.

12 Q. With respect to decreases in Georgia's consumptive use, what were the specific consumption cap scenarios that you modeled?

14 15 Α. We basically looked at 5 percent deltas all the 16 way up to 30 percent. So we looked at 30 17 percent. We looked at 1992 levels, which is 18 about sort of a 40 percent decrease. And we also 19 ran Dr. Sunding's analysis of 1000 cfs.

20 Q. And at a high level, what did your modeling show 21 about the impact of decreases in Georgia's 22 consumptive use on state line flows into Florida?

23 Α. And, again, we're running this under the 2011 24 baseline. And when we did that, we essentially 25 found no material differences whatsoever at the

THE REPORTING GROUP

Mason & Lockhart

1 state line during the -- during the drought --

serious summer months for any of those runs. No

3 difference.

2

6

16

17

18

19

Q. Let's take a look at page 38 of your direct 4 5 testimony. And I would like to focus on

demonstrative 21.

7 Α. Okay.

8 Q. And does the demonstrative 21 show the results of 9 one of your ResSim model runs about the impact of

10 consumption caps on state line flows?

11 A. Yes. That's a fairly typical plot of all of 12 these. We're plotting two different colors here, 13 blue and orange, the blue being the baseline run. 14 And the flow is plotted as a -- just a function 15 of time through the year, January to December.

So the blue is the baseline original run. And then when we cut, the orange represents what additional flows might or might not come across state line.

20 Q. Okay. And --

21 You will notice in the month of January and in 22 the month of May, there are additional flows 23 coming through to Florida. And, actually, a little bit in July. But across the board for the 24

25 bulk of that time through the summer it's just a

TRIAL - November 29, 2016 (Vol. XV) Florida v. Georgia 4004 4006 1 flat line, and they're the same. 1 Georgia's consumptive use, whether we're talking 2 2 Q. What was the specific consumption cap that you about increases or decreases, is not having a 3 were modeling in demonstrative 21? 3 significant impact on state line flows into 4 A. This one is a 30 percent cap on both M & I and on 4 Florida during the dry times and drought years? 5 agricultural use. 5 Α. It's all related to two things, the reservoirs 6 Q. And what was your conclusion about reservoir 6 and the way in which the Army Corps of Engineers 7 operations from the results of this modeling? 7 operates those reservoirs. They have the RIOP 8 A. Well, the conclusion is that the -- you know, the 8 rule. They basically are acting as a smoothing 9 reservoirs that are in the system -- and there 9 mechanism or a dampening mechanism for any 10 are these -- there are these five big reservoirs 10 changes that might migrate through the system. 11 with three big storage reservoirs in place. They 11 Q. I want to move on to a different topic, and I 12 tend to smooth or dampen out any changes or any 12 want to talk about your analysis of the 13 alterations that might take place in the system. 13 relationship between precipitation and streamflow 14 And that's what they're designed to do. 14 in the ACF Basin. Have you analyzed that issue? 15 Q. Now, Dr. Bedient, I think you had said that 15 Α. 16 16 you -- when you had looked at caps, you went all **Q.** Now, let's take a look at page 56 of your direct 17 the way up to a 40 percent reduction in 17 testimony, specifically demonstrative 34. 18 18 consumptive use; is that right? Α. Okay. 19 A. Yes. 19 **Q.** And does this show the results of your analysis 20 20 Q. And if you look at page 40, demonstrative 23 -of the relationship between streamflow and 21 21 A. Right. precipitation? 22 22 A. It does. **Q.** -- in your direct testimony, does that show the 23 results of your analysis with respect to the 23 And I apologize; it's a fairly complex graph, 24 impact of a 40 percent reduction in consumptive 24 but I can -- I can explain it, I think, in simple 25 use? 25 terms. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4005 4007 1 A. Yes. This is essentially taking it all the way 1 There are two things being shown here. The 2 back to the 1992 level of consumptive use, a 40 2 red is rainfall. And it's been converted over 3 percent difference or cap. And when -- again, 3 into cubic feet per second, but essentially it's you see very similar results here to what we got 4 4 inches of rainfall that's been converted. And 5 5 with the 30 percent. you will notice how the rain starts over there in 6 6 **Q.** And what are those results? 1929 on the graph. It was actually a fairly high 7 A. And those results basically say no material 7 year, and then it bounces up and down quite a 8 difference of flows at the state line. A few 8 bit. There is a low year in 1954, another kind 9 little differences, but mostly in the wetter 9 of low year in the '60's. And then you come 10 months, not in the dry months. 10 across, and you will notice that over there in Q. Now, let's talk about the modeling you did of 11 11 the 1999 and forward time frame, you see three 12 12 sort of double-year droughts; '99 and 2000, '06 increases in Georgia's consumptive use. What 13 13 scenario did you look at for that modeling? and '07, and then '11 and '12. And then you will 14 A. There, we -- we ran the 2040 into the future use, 14 also notice that the flows -- and these are flows 15 I believe. 15 at the Chattahoochee Gage at the state line --16 **Q.** So you looked at projected increases in Georgia's 16 the flows also show a marked reduction. And, 17 consumptive use. Is that right? 17 again, these are in units of tens of thousands of 18 A. That's correct. 18 cfs average annual flows. But they show a marked 19 **Q.** And what did your modeling show with respect to 19 reduction, especially post-1999. So there's this 20 correlation that appears to show up.

21

22

23

24

20 the impact of increases in Georgia's consumptive 21 use on state line flows into Florida?

22 A. And, again, going all the way to 2040 with the 23 projected uses, we see no material differences especially, again, in the summer months. 24

25 Q. Dr. Bedient, how does it make sense that

THE REPORTING GROUP Mason & Lockhart

25 BY MS. ALLON: THE REPORTING GROUP Mason & Lockhart

one more demonstrative?

MS. ALLON: Your Honor, may I hand up

May I hand up one more demonstrative?

SPECIAL MASTER LANCASTER: Please.

TRIAL - November 29, 2016 (Vol. XV) 1 Q. Now, Dr. Bedient, this is a demonstrative that 1 2 2 the Court has seen before. Florida's counsel 3 actually used it in their opening statement. 3 Have you seen this before? 5 A. I have. 6 Q. Okay. And can you describe what it shows. 6 7 A. It's basically showing the -- and I choose to 7 8 look at annual streamflow; it's easier to see, 8 9 but you can also look at June to September 9 carries over. 10 streamflow. And what you're seeing is a 10 11 comparison between droughts of '54 and '55 11 12 compared to today, 2011 and 2012. 12 13 And the -- the effort here is to show that --13 Q. 14 or the statement up here is that fewer inches of 14 15 precipitation and higher temperatures in the past 15 16 16 lead to -- or were considerably higher and 17 produced sort of worst droughts in the future. 17 Basin? 18 18 **Q.** Okay. And do you agree with that conclusion? 19 A. No, I don't. I think there are a lot of other 19 20 20 issues going on here. 21 21 **Q.** Okay. Can you describe what you mean by that? 22 22 A. Well, in particular two things have changed the gage. 23 dramatically in the basin between '54 and '55. 23 Q. Thank you. 24 And that was shown on my earlier exhibit that we 24 25 25 just looked at. THE REPORTING GROUP Mason & Lockhart 4009 1 In 1954, that was basically just a BY MS. WINE: 2 single-year drought. And all the -- all the 2 3 3 earlier droughts were sort of single-year type 4 drought occurrences. of rainfall. 5 5 A. Sure. Secondly, in 2011 and 2012 the reservoirs 6 were in place; the RIOP was in place. So they 6 7

A. That shows what I was just talking about for 1954 and '53. You will notice in January of 1954, the rainfall starts to really, really go down. And you will notice the flows also in '54 track down, but they start very high. They start at 40,000. And the reason they start really high at 40,000 is because look at that ginormous rain spike that comes in at the very, very end of 1953. It just This is a slow-moving, slow-responding basin. And those flows just carry over into '54 and register at the state line. Now, Dr. Bedient, based on your review of the precipitation data and streamflow data, what have you concluded about the relationship between precipitation and streamflow in the ACF A. Well, I think it's just common sense that higher rain, higher runoff, higher streamflow; lower rain, especially significantly lower rain, lower flow -- lower streamflow, lower flows measured at MS. ALLON: Your Honor, nothing further. **EXAMINATION** THE REPORTING GROUP Mason & Lockhart

were hitting or shooting to hit that minimum 5,000, which explains why you see the June to September streamflow in there around 5500.

Lastly, and more importantly than anything, the high annual streamflow during 1954 is kind of a false and misleading number because the end of 1953 had one of the largest rains on record. And it happened in the very end of the year, and then flows just carried over into 1954 generating a higher value, much higher than -- you will notice '55; the value there is 11,000. And you will notice it's 3,000 higher. And that's just not -and I investigated that.

- 20 Q. Okay. And let's look at page 85 of your direct 21 testimony.
- 22 A. Okay.

8

9

10

19

- 23 **Q.** And specifically at demonstrative 50.
- 24 A. All right.
- 25 **Q.** And can you describe what demonstrative 50 shows.

THE REPORTING GROUP

Mason & Lockhart

Q. Sir, I just want to pick up where we left off with your counsel asking you about your analysis

Q. You're not a climatologist. Correct?

7 A. I'm not a climatologist.

8 Q. And you're not a hydroclimatologist?

9 A. I'm not one of those, no.

10 Q. And were you here when Dr. Hornberger testified 11 about this chart that you were just asked about 12 comparing '54 to '11 and '55 to 2012?

13 A. No, I wasn't here.

14 Q. And were you -- so you weren't here to hear him 15 say he compared 2010 to 1953, and that they were 16 the same?

17 A. No.

18 Q. And did you hear him talk about looking at the 19 effect of any kind of carryover analysis?

20 Α. No, I did not.

21 **Q.** Sir, when you looked at the relationship between 22 rainfall and streamflow for purposes of your

23 expert report and your prefiled direct testimony,

did you rely on gridded climate datasets? 24

25 A. No. I relied on the data that basically came

THE REPORTING GROUP

Mason & Lockhart

4011

TRIAL - November 29, 2016 (Vol. XV) Florida v. Georgia 4014 1 from the National Weather Service out of the EPD 1 multi-year type analysis. 2 2 Q. So your modeling cannot give us absolute flow 3 Q. And, sir, are you aware that NOAA has now 3 numbers going back in time or in the future if we published on its website and said elsewhere that 4 want to look at a particular time period. 4 5 the gridded datasets are the state-of-the-art 5 Correct? 6 datasets that are to be used these days? 6 A. At a particular day it's more difficult. For a 7 A. I am familiar with that. 7 particular time period, we can do a better job. 8 Q. Okay. And you haven't looked at the gridded 8 Q. Okay. Thank you. 9 datasets or done any analysis to see what the 9 A. Thank you. 10 relationship would be -- between rainfall and 10 SPECIAL MASTER LANCASTER: Any redirect? 11 streamflow would be if you used those datasets. 11 MS. ALLON: Yes, your Honor, very brief. REDIRECT EXAMINATION 12 Correct? 12 13 A. Well, I haven't done a detailed analysis; but I 13 BY MS. ALLON: 14 have looked at some of Dr. Hornberger's annual 14 **Q.** Dr. Bedient, counsel for Florida asked you if you 15 rainfall totals. And I have compared those back 15 were a climatologist or a hydroclimatologist, I 16 16 against our annual rainfall totals. And they think. Do you have expertise in studying 17 17 compare very, very well. They're very close. rainfall and streamflow data? A. Yes. Extensive. I do. **Q.** Sir, have you looked at any of Dr. Lettenmaier's 18 18 19 analyses? 19 Q. About how long have you been studying and 20 20 A. I have. analyzing that data for? 21 **Q.** And have you looked at his analysis of the 21 A. I have been looking at rainfall and runoff for 40 22 relationship between rainfall and streamflow? 22 years in Texas, where we get really, really big 23 A. I have. 23 storms, and all over the country, for that 24 Q. And he uses gridded climate datasets; does he 24 matter, as well. I have done it for a long time. 25 not? 25 **Q.** And do you have experience in applying that THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4013 4015 A. He does. 1 knowledge in the real world? 2 **Q.** And he comes up with very different conclusions 2 A. I do. I have developed and operate realtime 3 than you do. Correct? 3 flood warning systems that work off of radar A. He does. 4 rainfall and high-tech rainfall. So I'm quite 4 5 5 **Q.** Now, sir, I just want to make sure I'm clear on familiar with rainfall databases. 6 one thing. Going back to your ResSim modeling 6 MS. ALLON: Nothing further, your Honor. 7 7 and your use of the UIF dataset, your counsel Thank you. 8 8 handed out this sheet that has some excerpts from MS. WINE: Nothing further. 9 testimony. Correct? 9 SPECIAL MASTER LANCASTER: Doctor, you A. Yes. 10 10 were here when Dr. Panday testified? 11 11 **Q.** And I just want to make sure I heard correctly. THE WITNESS: I was. 12 12 SPECIAL MASTER LANCASTER: I want you to Are you now conceding that your ResSim modeling 13 work is of no utility if we want to know what 13 think very carefully before you answer this 14 absolute flows are at a particular time period? 14 question. 15 A. No, I haven't said that. In fact, I said just 15 THE WITNESS: I will, sir. 16 the opposite. The time period from '08 to '11 we 16 SPECIAL MASTER LANCASTER: It's pouring 17 compared and got a very, very good result. So I 17 rain out there. It's very cold. And it's 18 think it's an accurate tool. 18 getting dark. 19 19 **Q.** So you're purporting to state what the absolute Do you remember what Dr. Panday said 20 20 flows are on particular days? when I asked him questions? 21 21 THE WITNESS: You asked him that A. No. Over a period of time if you do a long-term 22 analysis and see how well that model works, not 22 question? 23 necessarily day-to-day, but across a three-year 23 SPECIAL MASTER LANCASTER: No, no. I 24 period, it works very well. And that's the 24 asked him questions. 25 system, by design, is a -- is a multi-month, 25 THE WITNESS: Oh, yes. Yes.
