4067 1 (Whereupon the video was played.) 1 McAnally, M C A N A L L Y. 2 MR. AVALLONE: And, your Honor, the 2 MS. DeSANTIS: Your Honor, may I 3 final video we'll show additional clips from 3 approach to hand the witness his direct 4 Mr. Leitman's deposition that Florida 4 testimony? 5 requested to be included. 5 SPECIAL MASTER LANCASTER: Please. 6 (Whereupon the video was played.) 6 DIRECT EXAMINATION 7 MR. AVALLONE: Okay. Your Honor, that's 7 BY MS. DeSANTIS: 8 it for the video this morning. Thank you. 8 Q. Dr. McAnally, I have handed you your written 9 MR. PERRY: Good morning, your Honor, I 9 direct examination testimony in this matter. Do 10 just have one point I would like to make on 10 you adopt this testimony as your sworn testimony 11 the presentation. I think there was perhaps 11 in this case? A. I do. 12 just a little bit of confusion with some of 12 13 the clips. And so if I might, I would like 13 MS. DeSANTIS: I tender the witness. 14 to point out just two pages in one of the 14 MR. LEOPOLD: Good morning, your Honor. 15 exhibits that Georgia put forward. It's 15 SPECIAL MASTER LANCASTER: Good morning. 16 tab 1. It's the 6th and 7th pages that 16 CROSS-EXAMINATION 17 address the effects of reducing agricultural 17 BY MR. LEOPOLD: 18 irrigation in the Flint Basin. And on those 18 **Q.** Good morning, Dr. McAnally. 19 pages, there's a discussion of, among other 19 A. Good morning. 20 20 things, sod-based rotation, and on the **Q.** Good to see you again. 21 21 seventh page, which is titled The Effects of Dr. McAnally, you have offered an expert 22 22 opinion in this case on the effect of various Reducing Agricultural Irrigation in the Flint 23 Basin, there's a description of means to 23 hypothetical scenarios of Apalachicola River 24 reduce the need for irrigation in the basin 24 flows on average salinity and water quality in 25 by 50 to 75 percent on peanut and cotton 25 Apalachicola Bay. Correct? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4066 4068 1 crops and a various number of different means A. That's correct. 2 2 that can be used to reduce irrigation by 22 **Q.** And specifically, you evaluated the effects of 3 percent, 15 percent, and the like. So that's 3 changes in those river discharge scenarios on 4 the 7th page. salinity in Apalachicola Bay. Correct? 4 5 They're unnumbered, which is why I'm 5 A. That's correct. 6 calling it 7th. It's the 7th page of the 6 **Q.** And to arrive at that opinion, you relied on two 7 document at tab 1 of the binder that Georgia 7 primary types of modeling, a physics-based model 8 8 and a statistical-based model. Is that right? handed up. 9 Thank you, your Honor. 9 A. That is right. 10 10 MR. PRIMIS: Your Honor, the State of Q. And you have stated previously that your 11 11 statistical-based model alone cannot establish a Georgia will now call Dr. William McAnally. 12 My colleague, Karen DeSantis and 12 cause and effect relationship; isn't that right? 13 Mr. Avallone, will be handling that witness. 13 A. A statistical model can establish correlations 14 THE CLERK: Please raise your right 14 and mathematical relationships. Interpretation 15 hand. 15 of those results to indicate cause and effect is 16 Do you solemnly swear that the testimony 16 then another step. 17 you shall give in the cause now in hearing 17 Q. Okay. And you also used those models, sir, to 18 shall be the truth, the whole truth, and 18 evaluate the effect of sea level change on 19 nothing but the truth, so help you God? 19 salinity in Apalachicola Bay; isn't that correct? 20 THE WITNESS: I do. 20 A. That is correct. 21 21 THE CLERK: Please be seated. **Q.** And so I know you have discussed both river 22 Pull yourself right up to the microphone 22 discharge and sea level rise in your opinions. I 23 23 want to first focus on your assessment of the and please state your name and spell your 24 last name. 24 effects of river discharge on salinity. Okay? 25 THE WITNESS: My name is William 25 A. Okay. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

4069 4071 Q. And you're familiar with Dr. Greenblatt, 1 Correct? 2 2 Florida's expert in this case. Right? A. I don't know the precise comparison of the other 3 A. Iam. 3 flows that were considered. I tested -- I 4 Q. And you know that she assessed the impact of 4 tested four flows; plus I did also run two of changes in river flows on salinity in Dr. Greenblatt's flows. So how those would 6 Apalachicola Bay. Correct? 6 compare to the thousand cfs during the dry season 7 A. I'm sorry. Could you repeat that. 7 I'm afraid I can't answer. 8 Q. Sure. Dr. Greenblatt assessed the impact of 8 Q. But you're aware, aren't you, Dr. McAnally, that 9 changes in river flows on salinity in the bay; 9 Florida is seeking more than an additional 1,000 10 isn't that true? 10 cubic feet per second in riverflow as part of the 11 A. That's true. 11 remedy in this case? 12 12 Q. And you're aware also that Dr. Greenblatt A. I'm not aware of what Florida is seeking, sir, 13 testified as a general matter that salinity 13 other than what was expressed in my report. 14 decreases when more flow enters the bay from the 14 Q. So you didn't model the effect on salinity of an 15 river: Isn't that true? 15 additional incremental freshwater inflow as part 16 A. I'm aware that she has expressed that opinion in 16 of a remedy scenario. Right? 17 17 her report. Α. As I said, I modeled four scenarios, the 1992 --18 18 **Q.** And she also said that salinity increases as less that were labeled as 1992 consumption, as 2011 19 flow from the river enters the bay. Do you 19 consumption, and as 2040 consumption, and then 20 20 recall that? the conservation scenario, which was the 2011 or 21 21 A. I recall that her report says that as well. baseline case plus a thousand cfs during selected 22 22 Q. And you would agree, would you not, Dr. McAnally, months. Then I also modeled the two flows by --23 that all else being equal, input increased 23 that Dr. Greenblatt used entitled No Withdrawals 24 freshwater inflows into Apalachicola Bay decrease 24 and Remedy. And so those are, a round-up, six 25 25 salinity. Isn't that true? different freshwater flow scenarios. But those THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4070 4072 A. Since you added the phrase that she did not; that 1 were the only ones that I ran. 2 is, all other things being equal, then I can 2 Q. And you're aware that Dr. Greenblatt's remedy 3 3 agree with the statement. scenario was also a thousand cubic feet per Q. And in the converse, all else being equal, 4 4 second. Right? 5 decreased freshwater flow leads to higher 5 A. I don't recall the specifics of her remedy 6 salinity in Apalachicola Bay; isn't that true? 6 scenario. I recall that it included -- the only 7 A. That is true. 7 thing that I recall specifically about it was 8 8 **Q.** And you testified that you modeled for specific that it included a reduction -- maybe a 50 9 scenarios of river discharge as part of your 9 percent reduction in agricultural use and some 10 10 opinion. Right? other conservation measures. 11 11 A. I did. Q. Okay. All right. Well, you would agree with me, 12 Q. And one of those contemplates additional flows 12 sir, would you not, that all else being equal, 13 13 additional increments of flow into Apalachicola into Apalachicola of a thousand cubic feet per 14 second, which you call a conservation scenario. 14 Bay would have the effect of decreasing salinity. 15 Right? 15 Correct? 16 A. I'm sorry. I missed the first part of your 16 Α. As long as you include the statement all else 17 question about the conservation scenario. 17 being equal, then, yes, additional inflow will 18 Q. One of those scenarios contemplates a thousand 18 decrease salinity in Apalachicola Bay, although 19 additional cubic feet per second, which is what 19 perhaps not by significant amounts, which is 20 20 you called a conservation scenario. Right? the -- one of the things that I found in my 21 21 A. That was what -- how the conservation scenario analysis. 22 22 Q. was described, yes. And you also are aware, are you not, 23 23 Q. But you did not model for any scenarios where Dr. McAnally, that Dr. Greenblatt testified with 24 there's more than an additional thousand cubic 24 regard to something called residence time in 25 feet per second into the Apalachicola Bay. 25 Apalachicola Bay. Right? THE REPORTING GROUP THE REPORTING GROUP

Mason & Lockhart

2

3

- 1 A. I recall seeing that in her report.
- **Q.** And you're aware that she looked at the effect of 2
- 3 freshwater flows on residence time in the bay.
- Right? 4
- 5 A. I do.
- 6 **Q.** And are you aware that Dr. Greenblatt testified
- 7 that persistent low flows would increase
- 8 residence time and corresponding salinities in
- 9 the bay?
- 10 A. I do recall that her analysis suggested that
- 11 decreased freshwater flows would increase
- 12 residence times in Apalachicola Bay.
- 13 **Q.** I'm sorry. Just to clarify, that persistent low
- 14 flows would increase residence time. Right?
- 15 A. I think you can add persistent to that sentence without any problem. 16
- 17 Q. Great. And you didn't conduct any analysis of
- 18 residence time; did you, Dr. McAnally?
- 19 A. I did.
- 20 **Q.** Well, you didn't present any analysis regarding
- 21 the change in river discharge in residence time
- 22 in your direct testimony; did you?
- 23 A. In my direct testimony, I don't believe I 24 included anything about residence time.
- 25 **Q.** And you're not aware, sir, are you, of the effect THE REPORTING GROUP

Mason & Lockhart

A. I do.

that?

- Q. And this is your plot of the daily discharge
- 6 of -- at the Sumatra Gage from 2002 to 2014.

Q. I want to invite your attention to the plate,

plate 1, at the top of the page. Do you see

- 7
- 8 A. The date range on this plot is 2002 to 2014.
- 9 Q. And it's plotting riverflow measured at the
- 10 Sumatra Gage in the river. Correct?
- 11 A. That's correct.
- 12 **Q.** And I want to direct your attention, if you
 - would, to the portion of the plot that covers the
- 14 years 2011 and '12. Can you see that portion?
- 15 A. I do.

13

- 16 Q. And that's the period of low flows that I'm -- I
- 17 have been referring to here plotted on your
- chart. Isn't that correct? 18
- 19 A. Yes.
- 20 **Q.** Now, I would like you to now focus your attention
- 21 on plate 2 on the same page. Okay?
- 22 And on plate 2 now you have plotted salinity
- 23 at Dry Bar in the same time period. Correct?
- 24 A. That's correct.
- 25 **Q.** And if I can invite your attention to the portion THE REPORTING GROUP

Mason & Lockhart

4074

- 1 of residence time on the Apalachicola Bay
- 2 ecosystem; are you?
- 3 A. I have no opinions to offer on ecosystems, sir.
- 4 **Q.** So you -- you're not aware of the biological
- 5 impact of the change in freshwater flows on the
- bay ecosystem. Right? 6
- 7 A. I have no opinion to offer on biological effects.
- 8 **Q.** Now -- but you are aware that persistent low
- 9 flows occurred in the Apalachicola River in 2011
- 10 and 2012. Right?
- 11 A. I'm aware of that.
- 12 **Q.** And, in fact, your expert report included a chart
- 13 that reflected the low flows at the Sumatra Gage
- 14 in 2011 and 2012. Right?
- 15 A. I believe that -- that chart -- such a chart was
- 16 in my report, yes.
- 17 MR. LEOPOLD: If you would, Mr. Walton,
- 18 please bring up appendix C, page C-48, in
- 19 Dr. McAnally's report. And this is tab 2 in
- 20 your binder.
- 21 Your Honor, may I approach?
- BY MR. LEOPOLD: 22
- Q. Sir, if you want to turn to the hard copy, it's 23
- 24 tab 2, appendix C at page C-48.
- 25 A. I'm there.

THE REPORTING GROUP Mason & Lockhart

- 1 of the chart that reflects 2011 and 2012 on the 2 right-hand side.
- 3 MR. LEOPOLD: If you could highlight
- 4 those, Mr. Walton.
- 5 BY MR. LEOPOLD:
- 6 Q. Do you see that that period has a corresponding
 - period of higher salinity; isn't that true,
- 8 Dr. McAnally?

7

- 9 A. I see that.
- 10 **Q.** And unlike other years, salinity never dropped to
- 11 the lower levels that it did in prior years on
- 12 this graph. Correct?
- 13 A. If you're saying there were lower salinities in
- 14 prior years than in 2011-2012, then, yes, that is
- 15 correct. That is a correct statement.
- 16 **Q.** And are you aware, Dr. McAnally, that those lower
- 17 levels of salinity are necessary to flush out
- 18 saltwater predators in Apalachicola Bay?
- 19 A. I'm sorry. I didn't follow the question.
- 20 **Q.** Are you aware that biologically the system needs
- 21 lower levels of salinity to flush out saltwater
- 22 predators in Apalachicola Bay?
- 23 A. I am not offering any opinion on biological 24 predators.
- 25 **Q.** All right. And, now, moving on, your statistical THE REPORTING GROUP

TRIAL - November 30, 2016 (Vol. XVI) Florida v. Georgia 4079 1 analysis looked at salinity from three stations A. That is true. 2 2 **Q.** And the darker the color indicates the greater in Apalachicola Bay, East Bay, Cat Point, and Dry 3 Bar: isn't that correct? 3 change in salinity. True? A. That is also true. A. That's correct. 5 Q. And you would agree that all three of those **Q.** So if I could focus your attention to the upper 6 stations are influenced by freshwater flow from 6 portion of the bay, you will see areas that are 7 the river. Correct? 7 in a dark orange color. Right? 8 A. All three of those stations are influenced by 8 A. I see that. 9 freshwater flow from the river. 9 Q. And you would agree with me, would you not, 10 **Q.** And you would agree also, would you not, that the 10 those areas are closer to the mouth of the river? 11 locations closer to the freshwater discharge are 11 A. They are close to the mouth of the river. I'm 12 more impacted from changes in those freshwater 12 not sure -- closer than what? 13 flows. True? 13 Q. And part of that area includes East Bay; does it 14 A. Not necessarily, no, sir. 14 not? 15 **Q.** That's not what your modeling shows? 15 That is in East Bay. 16 16 A. One of the things that I found was that East --**Q.** Now, you can set that aside for a moment, 17 the East Bay station was also influenced by flow 17 Dr. McAnally. 18 out of Tate's Hell Swamp. And so it was the 18 In your testimony you have also offered 19 contribution from the Apalachicola riverflow, 19 opinions regarding salinity levels in the bay 20 20 under different discharge scenarios created by which is distinct from that, was, therefore, 21 21 Dr. Bedient. Correct? I'll say moderated somewhat or altered somewhat 22 22 A. I did. because of the Tate's Hell drainage into the East 23 Bay right -- very close to the East Bay Gage. 23 **Q.** And your model predicted that salinity levels 24 would be at various locations -- would change at 24 Q. And didn't you opine, Dr. McAnally, that the 25 Tate's Hell influence on salinity was 1 percent 25 various locations in the bay given those inputs. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4078 4080 1 approximately? 1 Right? 2 A. I don't recall the percentage at East Bay. I 2 My model showed what changes would occur in 3 recall that at Cat Point and Dry Bar it was a 3 salinities as a result of differences in those 4 very small fraction. It was probably on the flows that Dr. Bedient provided. 5 order of 1 to 3 percent. But I don't recall if 5 Q. But you didn't do any independent analysis of 6 that was also the case at East Bay or not. 6 Dr. Bedient's flow scenarios. Correct? 7 Q. So, Dr. McAnally, if you would, I would like you 7 A. I did not. 8 8 **Q.** And you never spoke with Dr. Bedient about how he to turn in your testimony to page 12, which is 9 your demonstrative Exhibit 4. That's tab 1 in 9 conducted his work. Right? 10 A. I did not. your binder, if you want to use that, or you can 10 11 11 use --**Q.** You just modeled the scenarios that counsel for 12 A. Okay. Tab 5? 12 Georgia gave you. Correct? 13 13 A. I modeled the scenarios that Dr. Bedient provided **Q.** Tab 1, page 12. 14 Are you with me? 14 in his spreadsheets. 15 A. I am. 15 Q. Which were provided to you by counsel for 16 **Q.** Okay. And this page shows a comparison between 16 Georgia. Right? 17 your baseline 2011 consumption scenario and the 17 A. I believe that's the case, yes. 18 proposed 1,000 cubic feet per second remedy. 18 Q. And are you aware, Dr. McAnally, that Dr. Bedient 19 19 Right? has testified that all his scenarios relied on 20 20 A. It shows a comparison of -- it says salinity data he received from Wei Zeng, who works for the 21 21 changes between the baseline 2011 versus the Georgia EPD? 22 conservation scenario was 1,000 cfs. 22 A. I am not aware. 23 Q. And it's correct, is it not, that the colored

> THE REPORTING GROUP Mason & Lockhart

portions of the map indicate the salinity

changes. True?

24

25

23

Q. Okay. And so you're not aware then that

24 Dr. Bedient testified that he did not look at

25 Georgia Tech's criticism of the UIF assessment

THE REPORTING GROUP

4081 4083 1 report. Is that right? But as you have agreed, upstream consumptive uses 2 2 A. I'm not aware of that discussion. can result in lower discharges. Right? 3 Q. And you have no basis to know how that criticism 3 Α. As a general statement, upstream consumptive uses would affect Dr. Bedient's scenarios. Right? do usually produce downstream flows that are 5 A. I do not. 5 6 **Q.** You just took the scenarios that Dr. Bedient gave 6 Q. That's an obvious fact; is it not? 7 you at face value. Correct? 7 It is, provided you include that remark about as 8 A. I took the flows that Dr. Bedient provided and 8 a general matter. I have dealt with some cases 9 ran them in my model. 9 in which the -- that are not the general matter. 10 Q. And then -- so Dr. Bedient also provided you with 10 And things can behave in unpredicted ways. 11 a -- or one of the scenarios provided was a 2011 11 And continuing with Dr. Greenblatt's opinion, 12 baseline scenario. Right? 12 one of the things you criticized about 13 A. That's correct. 13 Dr. Greenblatt's opinion was that she did not 14 Q. And you used that baseline as a comparison for 14 include uncertainty bounds for her model results. 15 the changes in your flow scenarios; isn't that 15 Correct? 16 A. That's correct. 16 17 A. I used that as the baseline or the comparison 17 Q. And you testified that uncertainty bounds 18 18 point between the -- that and the other three analyses are common in these types of studies, 19 scenarios. 19 and the omission is a serious deficiency. Right? 20 20 Q. And you're also aware that 2012 was a drought Α. Could you repeat that? 21 21 year. Right? **Q.** I believe you testified, sir, that uncertainty 22 22 A. I'm aware of that. bounds analysis are -- is common in these types 23 Q. As was 2011. Right? 23 of studies; and the omission by Dr. Greenblatt is 24 24 A. Correct. a serious deficiency. Right? 25 Q. In fact, are you aware that 2012 was a -- was 25 A. I did say that, yes. And I believe it. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4082 4084 1 more impactful in terms of the dry year than was 1 Q. You're aware that Dr. Greenblatt ran a 2 2011? 2 hydrodynamic model in this case. Right? 3 A. I don't recall the specific measures of degree of 3 She ran a hydrodynamic model as well? 4 drought for those two years, but I do know that 4 As part of her opinion in this case, she ran a 5 5 they were both low flow years. hydrodynamic model? 6 6 **Q.** But you didn't model salinity based on the 2012 Α. Yes, she did. 7 7 Apalachicola riverflow; did you? Which was similar to your physics-based model. 8 8 A. I did in the -- in the data model. In the Right? 9 physics-based numerical model, I stopped at 2011 9 Α. Correct. 10 10 because that was the -- at the time I was running Now, Dr. McAnally, if you would, please, I would 11 11 it, that was all that Dr. Bedient had generated. ask you to turn in your binder to tab 5. That's 12 **Q.** He didn't provide you with a 2012 scenario. 12 FX-922. And this is a document titled 13 13 Correct? Uncertainty Analysis of Estuarine Hydrodynamic 14 A. Not before I completed my report. 14 Models: An Evaluation of Input Data Uncertainty 15 Q. And you're also familiar that Dr. Greenblatt ran 15 in the Weeks Bay Estuary, Alabama. Do you 16 something called an unimpacted scenario which 16 recognize this document? 17 assumed no withdrawals of water in the Georgia 17 A. I do. 18 portion of the basin. Right? 18 Q. And it's from 2014. Correct? 19 A. I'm aware that she had a scenario that she called 19 Δ That's correct. 20 20 no withdrawals. And you are listed as a co-author of that. 21 Right? 21 Q. And you aren't offering opinion, are you, 22 22 Dr. McAnally, on the change in salinity levels Α. That's correct. 23 23 based on an unimpacted scenario where there is no Now, if you would, please, look at the bottom 24 24 paragraph in the right-hand corner which starts Georgia consumptive use. Right? 25 25 with the word despite. Do you see that? I'm not offering an opinion on that. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

4087 4085 A. Yes. 1 And to the extent that I can read and understand Q. Take a moment and read that. 2 the literature on climate, I have -- do believe 2 3 3 that climate change is occurring, has occurred, Q. So are you -- have you had a chance to review and will occur in the future. 5 that, sir? 5 Q. Okay. And, Dr. McAnally, if you would, I would 6 A. I have. 6 ask you to turn to tab 3 of your binder, which is 7 7 Q. So based on this paragraph, despite its a copy of your deposition transcript. If you 8 importance, your paper says that uncertainty 8 would, sir, please turn to page 61, lines 12 9 analysis is an uncommon practice in hydrodynamic 9 through 61 -- I'm sorry. Starting at line 12 --10 investigations. Right? 10 61, line 12, through 61, 15. 11 A. In -- yes. That's what it says. And in 2013 11 Are you with me? 12 12 when this paper was written, that was, indeed, A. Page 61, line 12. 13 the case. 13 **Q.** Right. And that states, and just going back to 14 **Q.** Thank you, Dr. McAnally. 14 your areas of expertise, do you consider yourself 15 I would like to move on to a new topic. 15 an expert in climate change? 16 It's your opinion, is it not, that sea level is 16 Answer. I do not. 17 17 rising in Apalachicola Bay. Right? Did I read that correctly? A. It's my opinion that sea level is rising in 18 A. That is correct. 18 19 Apalachicola Bay. 19 MS. DeSANTIS: Objection, incomplete 20 20 impeachment. Could the witness please be **Q.** And you have also offered an opinion that sea 21 21 level rise has increased salinity in Apalachicola directed to look at surrounding lines? 22 Bay since at least 2002. Correct? 22 BY MR. LEOPOLD: 23 A. That is correct. 23 **Q.** Sir, would you like to look at surrounding lines **Q.** And to evaluate the effects of sea level rise in 24 24 of the testimony, Dr. McAnally? 25 the future on Apalachicola Bay, you used your 25 A. Just that I went on to explain that what I have THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4088 4086 1 model to simulate a sea level rise of 1 actually said earlier, I think, is that while I 2 2 don't consider myself an expert in climate approximately .26 meters or 10 inches by 2040. 3 True? 3 change, I do consider myself expert in sea level 4 A. That's correct also. rise that is caused by climate change. 5 **Q.** And that was -- that 10 inches was from a 1992 5 Q. Thank you. 6 baseline. Correct? 6 A. Is that -- does that answer your question, sir? 7 A. That is correct. 7 **Q.** I'll move on. Thank you. 8 Q. Now, it's Georgia's position in this case, 8 So if you would, please, turn in your binder 9 Dr. McAnally, that this sea level rise is being 9 to tab 6. And this is FX-339. And my first --10 10 caused by global climate change. Right? are you -- sorry. Are you with me, Dr. McAnally? 11 A. I'm sorry. I don't know what -- how Georgia 11 A. And what page? 12 feels on it. It's my opinion that sea level rise 12 Q. Just starting on the first page of tab 6. 13 is -- in Apalachicola Bay is caused primarily by 13 A. All right. 14 climate change. 14 **Q.** And do you recognize this document, sir? 15 Q. Okay. So you believe global climate change is 15 A. I believe I do. 16 the driver for the increased sea level that you 16 **Q.** And this is a chapter, chapter 13, from the 17 discuss in your opinion. Correct? 17 IPCC's fifth assessment report, which you cite in 18 A. I do. 18 your testimony. Correct? 19 **Q.** But you're not a climatologist, are you, 19 A. It appears to be that, yes, sir. 20 Dr. McAnally? 20 Q. And just for the record, Dr. McAnally, the IPCC 21 21 is the Intergovernmental Panel on Climate Change A. I am not. 22 Q. And you're not offering an opinion in this case 22 which was set up through the United Nations. 23 about climate change; are you? 23 Right? 24 A. In this case I'm offering an opinion about sea 24 A. I believe that's correct. 25 level rise, which is a product of climate change. 25 Q. And you're familiar with the IPCC; aren't you? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

4091 1 A. I have been following their reports for a number Q. All right. I would like to focus your attention, 2 2 of years; yes, sir. if I may, to the four graphs at the top of the 3 Q. And you're aware, Dr. McAnally, that it's been 3 page under the section sub(a). Do you see that? 4 regarded by NOAA, the federal government agency, A. I see that. 5 as the most senior and authoritative body Q. And you have seen this before, correct, 6 providing science advice to global policymakers. 6 Dr. McAnally? 7 Right? 7 A. I believe I have. 8 A. I don't guess I have any personal knowledge of 8 Q. And you would agree with me that this is the 9 what NOAA says about the IPCC. There are several 9 IPCC's likely range of global mean sea level rise 10 hundred NOAA scientists that have worked on the 10 as shown through the gray-shaded bands around the 11 IPCC. And I do know that in their reports, NOAA 11 black line. Correct? 12 uses IPCC's data and methods. But as far as an 12 A. That's correct. And it's shown for various 13 official policy, I'm afraid I'm unable to 13 stages. 14 comment. 14 Q. Right. And the stages -- you mentioned there's 15 **Q.** Okay. If you would turn in your binder to tab 7, 15 four different scenarios here. Correct? please, sir, which is FX-935. Are you there? 16 A. Correct. 16 17 A. I'm there. 17 Q. And those scenarios are called RCP's, or 18 18 **Q.** Take a moment to review it. And I would like to representative concentration pathways? 19 invite your attention, sir, to the second 19 Α. Correct. 20 20 paragraph from the bottom, which begins **Q.** And would you agree with me that the different 21 21 internationally. scenarios consider future sea level rise from 22 22 A. I see that. more conservative to more aggressive. Correct? 23 **Q.** Do you see that? 23 A. That is the intent. 24 24 And that -- that's -- you would agree with me **Q.** Right. Now, if you would, sir, please turn in 25 that this web page is from NOAA's climate data 25 your binder to tab 8. And this is McAnally THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4090 4092 1 center? 1 demonstrative Exhibit 1. 2 2 A. Yes. Now, Dr. McAnally, this is the same page or 3 3 Q. Okay. But you did not draw on your sea level for the same four scenarios that I just showed rise projections from the IPCC in this case. you from the IPCC. However, on this one, we have 4 4 5 5 Correct? plotted your sea level rise future projections 6 A. I'm sorry. Please repeat that. 6 with the red data point, which was .26 meters or 7 7 Q. You did not draw your future sea level rise 10 inches of rise by 2040. Do you see that? 8 predictions from the IPCC in your opinion for 8 A. I see that. 9 9 $\boldsymbol{Q}.\;\;$ Okay. And as you can see, Dr. McAnally, your this case. Correct? 10 10 A. Indirectly, yes, sir, I did, because the NOAA and prediction is in excess of the gray bands on each 11 Corps of Engineers protections are based on the 11 of these scenarios. Correct? 12 12 Α. IPCC data and methods. Sir, by presenting this plot, you have committed 13 13 Q. It's -- so as you have testified, you used a a fairly bad error. These plots used by the IPCC 14 planning tool from the Army Corps of Engineers. 14 are for global average sea levels. They -- those 15 Right? 15 then must be turned into site specific estimates, 16 A. Army Corps of Engineers and NOAA. 16 which is what the Army Corps of Engineers and 17 Q. Okay. So I would like to invite your attention 17 NOAA does. And they have done -- taken these 18 back to tab 6 of your binder, which is the IPCC 18 results and applied them to the standard methods 19 document, sir. And at this time if you would 19 to Apalachicola Bay specifically. And that .26 20 turn to page 1181. 20 meters or 10 inches is in the middle of how they 21 21 A. I'm there. have applied these results to the specifics of 22 Q. Okay. 22 Apalachicola Bay, which are different than the 23 23 MR. LEOPOLD: Mr. Walton, if you could worldwide averages. 24 So is it your testimony, Dr. McAnally, then that 24 bring that up. 25 BY MR. LEOPOLD: 25 the sea level rise in the future in Apalachicola THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

TRIAL - November 30, 2016 (Vol. XVI) Florida v. Georgia 4095 1 Bay is going to exceed the worldwide average? Is 1 those areas; and I believe I'm capable of reading 2 2 that your testimony? and evaluating that literature. 3 A. I don't know what the worldwide average will be. 3 Q. So you haven't done any climate modeling I strongly believe that the worldwide average 4 yourself. Correct? 5 will be higher than the 2000 -- the 2013 IPCC 5 A. I have not. 6 projections. But the -- as those were used, 6 Q. Now, sir, moving on, you opine in your direct 7 these 2013 projections that we're looking at 7 testimony that sea level rose about 3 inches from 8 here, were the ones that were used by the Corps 8 2002 to 2014 in Apalachicola Bay. Right? 9 and NOAA to generate the authoritative results to 9 A. That's correct. 10 be used in the United States. 10 Q. And when you were asked about that opinion at 11 Q. Right. And your point that you selected exceeded 11 your deposition, you couldn't recall how you 12 even RCP 8.5, which is the most aggressive sea 12 arrived at the 3-inch sea level rise. Do you 13 level rise scenario that the IPCC used in this 13 remember that? 14 chart. Right? 14 A. Actually, I don't. But I do recall because I 15 A. I believe I have already pointed out that you're 15 have re-examined my report, perhaps in response 16 16 making a serious error by -to that question. 17 Q. And, sir --17 Q. And you have offered that opinion again in your 18 18 direct testimony. Right? A. -- making such a statement. 19 Q. -- I'll let your counsel -- I'm sure your counsel 19 Α. That's correct. 20 20 will get to that when you're doing your redirect; Q. But your prefiled direct testimony doesn't 21 21 but for now, I would just like to try to get provide any citation for your determination that 22 22 through the questions. sea level rise has risen 3 inches in 12 years in 23 And you testified a moment ago you're not a 23 Apalachicola. Right? 24 climatologist. Right, Dr. McAnally? 24 A. It cites my original expert report, particularly 25 A. That I'm not a what? 25 appendix C. And that's where the 3- inch rise THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4094 4096 Q. A climatologist. 1 was calculated. 2 A. That's correct. 2 **Q.** So if you would, please, sir, turn in your direct 3 Q. And you're not offering an opinion on future 3 testimony, which, again, is tab 1 in your binder, 4 to page 24; and I would like to focus your 4 climate change. Correct? 5 5 A. I am not offering it in this case. attention to paragraph 49. 6 Q. But you testified in your direct testimony, sir, 6 A. I'm at page 24. 7 7 that there will be a greater level of sea level Q. Okay. And paragraph 49 is where you authored 8 8 rise from glaciers in the Greenland ice sheet. this opinion. Right? 9 Do you recall making that statement? 9 A. Correct. 10 A. I do. 10 **Q.** And, sir, my question is it doesn't offer any 11 11 **Q.** But you, yourself, do not have any expertise with citation to the data that you relied upon to 12 12 offer this opinion. Correct? Greenland ice sheet melting. Correct? 13 A. You seem to be mistaking the -- or 13 A. I'm sorry. Are you complaining that I don't 14 misunderstanding the various disciplines. 14 offer a citation in this paragraph? 15 Greenland ice sheet melting is a geophysical 15 Is that your question or --16 process and is included in oceanography. And 16 Q. My question, Dr. McAnally, is simply you haven't 17 climatology affects that, but the actual melting 17 cited to the basis for your opinion that sea 18 of the land-based glaciers is part of coastal 18 level rise rose 3 inches in 12 years. Correct? 19 engineering and oceanography. 19 Α. It does not -- okay. That's part of my confusion 20 **Q.** So my question was do you have any personal 20 here. It says, the statistical analyses of 21 21 expertise with Greenland ice sheet melting? observed data show that. And that is my 22 citation. And that is what occurred in, I A. I would not attempt to do an independent research 22 23 23 on Greenland or West Antarctic ice sheet melting. believe it was appendix C of my original 24 However, once again, I do have a reading 24 technical report. 25 familiarity with the professional literature in 25 So it doesn't cite an external source; it

Do you agree with that math; or I can give you a calculator to if you would like to do it yourself. I'll take your word for it. Okay. So a 3-inch sea level change from 2002 to 2014 would result in a rate of rise of	2 3 4 5 6 7 8 9	Q.	taking a specific period, like I did, from 2002 to 2014, they are taking a very long-term average of hourly measurements. So the numbers, again, are not directly comparable. So you would agree with me then your rate of rise that you calculated is almost, not quite, three times the long-term average observed at the tide gage? MS. DeSANTIS: Objection, asked and
2 3 4 5 6 7 8 9	Q. A. Q.	years. Correct? Okay. And so if you if you divide 75 by 13, that's approximately 5.8. Do you agree with that math; or I can give you a calculator to if you would like to do it yourself. I'll take your word for it. Okay. So a 3-inch sea level change from 2002 to 2014 would result in a rate of rise of approximately 5.8 millimeters per year. Correct?	2 3 4 5 6 7 8 9	Q.	taking a specific period, like I did, from 2002 to 2014, they are taking a very long-term average of hourly measurements. So the numbers, again, are not directly comparable. So you would agree with me then your rate of rise that you calculated is almost, not quite, three times the long-term average observed at the tide gage? MS. DeSANTIS: Objection, asked and answered and misstating the witness's
2 3 4 5 6 7 8 9 10	Q. A. Q.	Okay. And so if you if you divide 75 by 13, that's approximately 5.8. Do you agree with that math; or I can give you a calculator to if you would like to do it yourself. I'll take your word for it. Okay. So a 3-inch sea level change from 2002 to 2014 would result in a rate of rise of approximately 5.8 millimeters per year. Correct? I can't I can't confirm that calculation. But	2 3 4 5 6 7 8 9 10	Q.	taking a specific period, like I did, from 2002 to 2014, they are taking a very long-term average of hourly measurements. So the numbers, again, are not directly comparable. So you would agree with me then your rate of rise that you calculated is almost, not quite, three times the long-term average observed at the tide gage? MS. DeSANTIS: Objection, asked and answered and misstating the witness's testimony that he just gave.
2 3 4 5 6 7 8 9 10 11	Q. A. Q.	years. Correct? Okay. And so if you if you divide 75 by 13, that's approximately 5.8. Do you agree with that math; or I can give you a calculator to if you would like to do it yourself. I'll take your word for it. Okay. So a 3-inch sea level change from 2002 to 2014 would result in a rate of rise of approximately 5.8 millimeters per year. Correct? I can't I can't confirm that calculation. But if you wish to say so, then I'll accept it.	2 3 4 5 6 7 8 9 10 11	Q.	taking a specific period, like I did, from 2002 to 2014, they are taking a very long-term average of hourly measurements. So the numbers, again, are not directly comparable. So you would agree with me then your rate of rise that you calculated is almost, not quite, three times the long-term average observed at the tide gage? MS. DeSANTIS: Objection, asked and answered and misstating the witness's testimony that he just gave. MR. LEOPOLD: Can he answer, your Honor?
2 3 4 5 6 7 8 9 10 11 12	Q. A. Q.	Okay. And so if you if you divide 75 by 13, that's approximately 5.8. Do you agree with that math; or I can give you a calculator to if you would like to do it yourself. I'll take your word for it. Okay. So a 3-inch sea level change from 2002 to 2014 would result in a rate of rise of approximately 5.8 millimeters per year. Correct? I can't I can't confirm that calculation. But if you wish to say so, then I'll accept it. Well, I just divided 75 millimeters, which is 3	2 3 4 5 6 7 8 9 10 11 12 13	Q.	taking a specific period, like I did, from 2002 to 2014, they are taking a very long-term average of hourly measurements. So the numbers, again, are not directly comparable. So you would agree with me then your rate of rise that you calculated is almost, not quite, three times the long-term average observed at the tide gage? MS. DeSANTIS: Objection, asked and answered and misstating the witness's testimony that he just gave. MR. LEOPOLD: Can he answer, your Honor? SPECIAL MASTER LANCASTER: Can he?
2 3 4 5 6 7 8 9 10 11 12 13 14	Q. A. Q.	years. Correct? Okay. And so if you if you divide 75 by 13, that's approximately 5.8. Do you agree with that math; or I can give you a calculator to if you would like to do it yourself. I'll take your word for it. Okay. So a 3-inch sea level change from 2002 to 2014 would result in a rate of rise of approximately 5.8 millimeters per year. Correct? I can't I can't confirm that calculation. But if you wish to say so, then I'll accept it. Well, I just divided 75 millimeters, which is 3 inches; right?	2 3 4 5 6 7 8 9 10 11 12 13	Q.	taking a specific period, like I did, from 2002 to 2014, they are taking a very long-term average of hourly measurements. So the numbers, again, are not directly comparable. TRIAL - November 30, 2016 (Vol. XVI) Florida v. Georgia 4103 A. Tab 2? 1 narrowing of the two easternmost passes based on Q. Tab 10 of the binder, which is Joint Exhibit 61. 2 Dr. Douglass, Florida's expert's report. 2 3 All right. And this is a report by NOAA 3 Correct? discussing sea level rise. Correct? A. That's correct. 5 A. It is. Q. And the value of sea level rise I used simply 6 **Q.** And you're familiar with this document as well; 6 means that in your future projections, you raised 7 aren't you? 7 the mean water level in the Gulf of Mexico by the 8 A. I believe so. 8 amount that you say sea level rise will have 9 Q. I would like to invite your attention to page 6 9 increased. Correct? 10 of the document. Are you there? 10 A. We raised the Gulf elevation by the amount that 11 A. Page 6? 11 we were testing. 12 **Q.** Yes. And in the second sentence, NOAA also 12 Q. And your -- Dr. McAnally, you're also familiar 13 reports a rate of sea level rise of 3.2 13 with the field of geomorphology. Right? 14 millimeters per year. Do you see that? 14 A. I am. Q. And you're familiar with something called 15 A. I see that. 15 16 **Q.** And you're familiar with that as well. Correct? 16 sedimentation; right? 17 A. I'm not specifically familiar with this 17 A. I am. Q. Now, the Court hasn't heard any testimony on 18 paragraph. It's been awhile since I have looked 18 19 at this. 19 these topics yet; so I want to ask you a couple 20 **Q.** But you would agree with me that that reported 20 of foundational questions. Okay? 21 rate in the NOAA document I'm showing you is 21 A. Okay. 22 almost double -- or, excuse me. You would agree 22 **Q.** And in this case, geomorphology refers to the 23 with me the 5.8 which we discussed earlier is 23 study of the shape of Apalachicola Bay. True? almost double this rate. Right? 24 24 A. I think that's an oversimplification, but I'll 25 A. Sir, in my age it is many times larger than 3 25 take it. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4102 4104 1 inches; but it has just about as much relevance 1 Q. Okay. I'll ask more detailed questions as we 2 2 to the discussion we're having as that number move forward. 3 right there. 3 And sedimentation is essentially the deposit 4 As I told you, these were calculated by two 4 of sand and other sediment in the bay. Correct? 5 very different methods; and they're based on 5 A. Sedimentation is the deposition of sand, silts, 6 different ways of treating the data. And so, 6 and clay sizes as well as organic material in a 7 therefore, they should not be comparable. I 7 water body. 8 would be astonished if they were the same. 8 **Q.** And you would agree that the geomorphology of the 9 Q. Right. I would like to move on to a new topic, 9 bay can be affected by sedimentation. Right? 10 10 Dr. McAnally, and specifically discuss your A. It can be, yes. 11 11 physics-based model with regard to sea level **Q.** And you would also agree that sedimentation can 12 rise. Okay? 12 change the depths of the bay. Correct? 13 13 A. It can. So you tried to predict in your opinion what 14 would happen to salinity in Apalachicola Bay 14 **Q.** And you would also agree in general other forces 15 under various changes in sea level conditions in 15 like sand washing into inlets to the bay due to 16 the future. Is that right? 16 wave action can change the depth of the inlet. 17 17 Right. 18 **Q.** And you first ran the model with a base condition 18 A. It can. for current sea level. Correct? 19 19 **Q.** Now, you have acknowledged that your model A. I did. 20 20 simulations do not account for all the responses 21 **Q.** And you also ran it with a value of sea level 21 of the bay to sea level rise. Correct? 22 rise imposed on that base scenario. Right? 22 A. The physics-based model does not respond to --A. I believe that's -- you stated that correctly. 23 does not include all of the various effects of 23

amount of sea level rise and the effects from the THE REPORTING GROUP Mason & Lockhart

Q. And then you modeled the effects of that same

24

25

Page 4101 to 4104 of 4284

24

25

Mason & Lockhart

sea level rise.

Q. For example, your model does not assume any

THE REPORTING GROUP

TRIAL - November 30, 2016 (Vol. XVI) Florida v. Georgia 4107 4105 1 changes to the depth of the bay. Right? A. I'm sorry. I -- I don't see those words. 2 2 A. It does not. Q. On the left-hand column. And we're on -- you're 3 Q. And it assumes no changes to the size of the --3 on page 29. Correct? to the depth of the inlets. Correct? A. Oh, I'm sorry. I'm on the table. 5 A. It considers only the width of the inlet 5 Yes, sir. I'm sorry. I'm now on page 29. 6 changing, not the depth. 6 Q. Okay. And you will see on the screen we have 7 Q. So -- right. So you did perform a scenario where 7 highlighted the Mid-Bay and St. George Sound 8 you decreased the width of the -- of two of the 8 columns or rows. 9 inlets to Apalachicola Bay. Correct? 9 A. Uh-huh. 10 A. That's correct. 10 **Q.** And you would agree with me that in the pass 11 **Q.** That was East Pass and Dog Island, which are the 11 narrowing scenario, both of those showed a .1 12 two easternmost inlets to the bay. Right? 12 reduction. Right? 13 A. That's correct. 13 A. Oh, I see what you're saying. You're saying that 14 **Q.** So in that model run, you attempted to account 14 the Mid-Bay line and the St. George Sound show a 15 for this particular geomorphic change. Right? 15 .1 change in salinity. 16 16 **Q.** Isn't that correct? A. I did account for that particular geomorphic 17 change to evaluate in a stand-alone mode how it 17 Α. That's correct. 18 **Q.** A reduction from salinity? 18 would affect salinity in Apalachicola Bay. 19 **Q.** So you ran the same amount of sea level rise in 19 A. That's correct. 20 20 this scenario, which was 10 inches; but this time Q. And, sir, isn't it true that the salinities 21 you narrowed the inlets. Right? 21 you're reporting here are average annual 22 salinities? 22 A. That's correct. 23 **Q.** And you would agree with me that narrowing of the 23 A. They are. 24 inlets, in fact, can result in lower salinities 24 Q. And you didn't present in your report or your 25 compared to the nonnarrowing of the inlet 25 opinion monthly or weekly average salinities; did THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4106 4108 1 scenario. Right? 1 you? 2 A. No, sir. I could not agree with that. 2 A. In my report I did not include the weekly. I 3 Q. Well, didn't you find that it actually did in 3 believe I included some monthly. But the monthly that model run that we just discussed? and the seasonal were essentially the same. 4 4 5 A. The -- that model run that we just discussed, the 5 Q. And your model, again, moving on from this chart, 6 changes were so slight as to be within -- well 6 sir, assumes no raising of the bottom of 7 within the noise level of the model. 7 Apalachicola Bay over time. Right? Q. Okay. If you would turn to page 29 of your 8 8 A. That's correct. 9 direct testimony, sir. That's McAnally 9 $\boldsymbol{\mathsf{Q}}.\ \ \, \text{And so other than the one example we have}$ 10 10 demonstrative 12. Are you with me? discussed where the passes were narrowed, you 11 11 have essentially increased the depths of the A. Not yet. 12 12 inlets by raising the water levels of the Gulf of Okay. I'm on page 12. 13 13 **Q.** Okay. And I would like to invite your attention Mexico. Right? 14 to -- well, first of all, Dr. McAnally, this is 14 A. Yes, sir. That's what will happen. If you raise 15 the comparison of the two scenarios we have just 15 the water level, the inlets will get deeper. 16 been discussing, one with no geomorphic change 16 Q. And that would result in an increased volume of 17 and the other with the passes narrowed as we 17 seawater entering the bay. Right? 18 discussed. Right? 18 Α. Not necessarily. 19 A. It does. 19 **Q.** Didn't you testify, sir, that the salinity in 20 20 **Q.** And I would like to invite your attention to the Apalachicola Bay is a mix of the freshwater 21 21 Mid-Bay and St. George Sound lines. Do you see discharge from the Apalachicola River and the 22 22 that? seawater entering the five passes in the barrier A. I'm sorry. I couldn't hear that. 23 23 islands in Apalachicola Bay? 24 Q. The lines on the chart that say Mid-Bay and 24 The -- as I believe I said in my testimony, the 25 St. George Sound, do you see those? 25 level of salinity at a location in Apalachicola

THE REPORTING GROUP

TRIAL - November 30, 2016 (Vol. XVI) Florida v. Georgia 4111 1 Bay is a result of the opposing forces of sea on the rate of sedimentation. Correct? 2 level stand and freshwater flow. Tides can make 2 Α. I don't recall estimating a rate. 3 that bounce around a little bit, but basically 3 And you did not model sedimentation for it's between those two opposing forces. Apalachicola Bay. Correct? 5 Q. Right. And all else being equal, if you raise 5 A. I chose not to model sedimentation in 6 the level of the Gulf of Mexico, that would mean 6 Apalachicola Bay because I had found in previous 7 more saltwater is entering into the bay. Right? 7 instances that it was not a significant factor. 8 A. If all else being equal, raising the Gulf level 8 **Q.** Okay. And, sir, you're aware that sedimentation 9 will increase salinities at a location -- any 9 rates for Apalachicola Bay have been published. 10 given location in Apalachicola Bay. 10 Correct? 11 **Q.** But you did not take into account whether the 11 I have -- I have read reports that report on 12 bottom of those inlets will also rise over time; 12 average rates, yes. 13 did you? 13 Okay. And you're aware of one rate of up to 8 14 A. I considered it. And based on my knowledge of 14 millimeters per year. Correct? 15 the physics involved and my experience elsewhere, 15 Α. I'm aware that in 19 -- early 1990's that such an 16 16 particularly in Louisiana, that it would not have estimate was published. 17 a noticeable effect on propagation of tides or 17 Q. And you're aware that Dr. Greenblatt reports that 18 18 salinity in Apalachicola Bay. rate of sedimentation in her opinion, right, as 19 Q. But you're not offering an opinion here on 19 well as Dr. Douglass? 20 20 A. I don't recall Dr. Douglass offering that number. geomorphology; are you? 21 21 But I -- I do recall Dr. Greenblatt offering A. Yes, I guess I am. 22 22 Q. Okay. If you would, please, sir, turn in your that number, which I discounted because, No. 1, 23 binder to tab 3, which is your deposition 23 it's -- it was 20 years ago and then was based on 24 24 data from years before that. So it was too old transcript. 25 A. Okay. 25 to be useful. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4112 4110 Q. And if you would turn to page 325, and I would 1 Q. And, yet -- sir, you will get a chance to expand 2 2 like to focus your attention to lines 18 to 22. on your opinion in redirect. 3 3 A. I'm on 325. And Dr. Douglass, he did opine on the effects Q. Okay. Line 18 through line 22, do you see that? 4 of sedimentation on salinity levels in the bay. 5 5 A. I see it. Correct? 6 Q. You testified under oath that you were not 6 A. Doctor -- both Dr. Douglass and Dr. Greenblatt 7 offering an opinion on the coastal geomorphology. 7 speculated on the effect of sedimentation. I 8 8 Correct? don't believe that speculation was based on the 9 A. No, sir. That's not what I said. 9 evidence that I have in my experience. So, 10 10 Q. Doesn't it say, sir, you are offering an opinion therefore, I don't believe they were correct. 11 here today on the analysis that Dr. Douglass did 11 Q. Thank you. So, Dr. McAnally, you have offered an 12 with respect to the geo -- coastal geomorphology 12 opinion that sea level rise is accelerating in 13 13 of the barrier islands in Apalachicola Bay? Apalachicola Bay. Correct? 14 Answer. I am not? 14 A. I have. 15 A. I did not offer then and I'm not offering now an 15 Q. And in reaching that opinion, you considered a 16 opinion on Dr. Douglass's analysis on 16 number of sources. Right? 17 17 A. I did. geomorphology. 18 **Q.** And, likewise, you have not offered an opinion on 18 Q. And one of those sources you considered is the 19 the rates of sedimentation in Apalachicola Bay. 19 data from the tide gage at Apalachicola Bay, 20 Correct? 20 which is maintained by NOAA. Right? 21 21 A. I'm trying to recall. I don't believe my report A. It is -- I believe it's maintained by NOAA. It 22 22 said anything about it. But in my direct is the tide gage there, yes. 23 23 testimony, I believe I did offer an opinion on **Q.** And, in fact, you included the chart, which we 24 sedimentation in the bay. 24 discussed earlier, in your direct testimony

25

showing this data. Right?

THE REPORTING GROUP

Mason & Lockhart

25

Q. And my question was you didn't offer an opinion THE REPORTING GROUP

4113 A. I did. **Q.** So the sentence immediately after the graph Q. And if you would turn again in your prefiled 2 2 reads, although the mean trend may change from 3 testimony to page 35. That's tab 1 in the 3 year to year, there is no statistically binder, page 35. significant difference between the calculated 4 5 A. I see it. trends if their 59 percent confidence intervals 6 **Q.** Are you with me? 6 overlap. 7 And, now, if I could -- this is the tide gage 7 Is that -- did I read that correctly? 8 chart that you cited. Correct? 8 A. That is what it says. 9 A. This is the mean sea level rise chart. 9 Q. Okay. And you were aware of that language when 10 Q. Okay. And if you would, turn back just briefly 10 you included this chart in your prefiled 11 to page 34. And I would like to invite your 11 testimony. Correct? 12 attention to paragraph 77 of your testimony. 12 A. I was. 13 A. Yes. 13 Q. Now, if you would, please, sir, turn to page 2 of 14 **Q.** And you state in the last sentence that this 14 tab 15. 15 demonstrative exhibit clearly shows that sea 15 A. Of tab 15? 16 level rise in Apalachicola accelerated from 1.38 16 **Q.** Same tab, just the second page. It's the same 17 millimeters per year prior to 2006 to 1.96 17 demonstrative exhibit. 18 millimeters per year in 2015 --18 A. Oh, I see. It's the back of it. 19 A. I see that. 19 **Q.** The back of the page. 20 **Q.** -- right? 20 Are you with me? 21 21 A. Yes, sir. I see it. And, now, Dr. McAnally, the image on page 35 22 of your testimony was taken from NOAA's website. 22 **Q.** Now, on page 2 we have highlighted the confidence 23 Right? 23 intervals in the shaded green. A. That's correct. 24 24 A. I see that. Q. And so if you would, please, sir, turn in your 25 **Q.** And you would agree that the vertical bar on the THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4116 4114 1 binder to tab 14. And that's FX-923. 1 far right is the confidence interval from 1967 to A. I'm at tab 14. 2 2015. Right? 2 3 **Q.** Okay. Now, what we have done here is we have A. That is correct. 3 reproduced the same image, but it includes the Q. And you would also agree with me that the 4 4 5 rest of the web page from which it was taken. Do 5 vertical bar on the far left is the confidence 6 6 interval for 1967 to 2006. Right? you agree? 7 A. That's what it appears to be, yes. 7 A. That is correct. Q. And, sir, have you had a minute to review it? 8 8 **Q.** And you can see in the green shading on this 9 A. I see it. 9 demonstrative that the two confidence intervals **Q.** Just to be clear, the word acceleration does not 10 overlap. Correct? 10 11 appear in the text on NOAA's web page. Right? 11 A. I can see that. 12 A. I don't believe the word acceleration appears on 12 Q. And when you included this in your testimony, you 13 13 were aware that this chart demonstrates no this page. 14 **Q.** And I want to focus your attention to the text at 14 statistically significant change in the trend in 15 the bottom of the page. Do you see the sentence 15 sea level rise. Correct? 16 that begins, although the mean trend may 16 A. No, sir. 17 change -- do you see that sentence? 17 Q. So when you testified that NOAA's chart 18 A. I see that. 18 showed accelerating rates of sea level rise, 19 **Q.** Okay. Now, if you would, turn in tab -- to tab 19 you knew this chart didn't show that. Right, 20 15 of your binder, which is McAnally 20 Dr. McAnally? 21 21 A. I used that chart to show it because that caveat demonstrative 3. Dr. McAnally, here we have 22 simply enlarged the same chart that you used; and 22 is a very standard one. And in essence, NOAA is 23 we have enlarged the sentence at the bottom for 23 protecting their rear end. 24 ease of reading. Okay? 24 I can read this chart, and I can understand 25 A. I see that. 25 the statistics. And I -- my interpretation of THE REPORTING GROUP THE REPORTING GROUP

Mason & Lockhart

4119 1 this is that it clearly shows an acceleration of 1 A. Dr. Douglass, in his analysis and report, used a 2 2 sea level rise. linear extension of sea level rise into the 3 Q. Okav. 3 future, which corresponds roughly to the low 4 MR. LEOPOLD: No further questions, your estimate that I used. Then in his direct 5 Honor. testimony, he added that inspection of this web 6 SPECIAL MASTER LANCASTER: We'll take a 6 page showed that there was no evidence of 7 break. 7 acceleration and says that it has been 1.96 millimeters per year for the past 40 years. And 8 (Time Noted: 10:50 a.m.) 8 9 (Recess Called) 9 clearly, that is a mistaken statement. 10 (Time Noted: 11:00 a.m.) 10 I don't believe that Dr. Douglass would 11 MS. DeSANTIS: Good morning, your Honor. 11 intentionally misrepresent this; but he simply 12 SPECIAL MASTER LANCASTER: Good morning, 12 didn't look at this closely enough to realize 13 counsel. 13 that 1.96 millimeters per year is a good bit 14 REDIRECT EXAMINATION 14 larger than 1.26 millimeters per year. 15 BY MS. DeSANTIS: 15 Q. Thank you, doctor. We will return to a 16 16 **Q.** Dr. McAnally, before we look at your salinity discussion of sea level rise, but I do want to 17 modeling and your opinions regarding sea level --17 focus on your salinity modeling. And I would 18 18 before we look at your salinity modeling and your like to focus particularly, again, in your 19 opinions regarding sea level rise, I would like 19 written direct behind tab 1, page 7. And we will 20 20 to ask you to look again behind tab 1 of your pull up on the screen the four bullets on page 7 21 21 binder, page 35, demonstrative 13 in your written of your written direct testimony on the screen. 22 direct. 22 And, Dr. McAnally, looking at the particular 23 23 So it is page 35. bullets in your written direct to guide you, can 24 24 A. I'm sorry, which tab? you please describe the hydrodynamic modeling 25 **Q.** Tab 1. 25 that you did and the scenarios that you used for THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4118 4120 A. Tab 1, page 35. 1 your opinions in this matter. 2 Q. Yes. Your written direct testimony, page 35, 2 A. I used these four scenarios, which we took --3 3 demonstrative 13. again, they were generated by Dr. Bedient. And 4 A. I'm there. 4 they represented the scenario 2011, which I 5 Q. And at the conclusion of his questioning, 5 called it the baseline. And that is --6 6 represented Georgia's upstream consumptive use Mr. Leopold was asking you about demonstrative 13. 7 7 Doctor, how does this chart show accelerating quantities of 2011. And scenario 2040, which was 8 rates of sea level rise in the Apalachicola Bay? 8 the same thing but with upstream consumptive uses 9 A. By definition, acceleration is a change in 9 to be projected basin-wide in 2040. And then 10 velocity. And so this is in effect a -- the 10 1992 was a look back at what those consumptive 11 11 millimeters per year makes it a velocity plot or uses were occurring in 1992. And then finally, 12 12 a speed plot. the conservation scenario, which was the same as 13 13 So it shows that back in the early 2000's, it the baseline except that the flows were increased 14 was -- the calculated speed was about 1.3 14 by a thousand cfs during the low flow season. 15 millimeters per year. And then it -- as it 15 Q. And I would now like to ask you to please turn to 16 increases, that is a positive acceleration. So 16 page 8 of your written direct testimony -- and 17 that is a -- its acceleration would be whatever 17 we'll bring that up on the screen -- going over 18 the difference is between 1.96 and 1.38, divided 18 to the top of page 9. 19 by then the time in years. 19 And, doctor, could you please look at the 20 So the fact that it's sloping upwards shows 20 bullet points on the bottom of page 8 and the top 21 that it's a positive acceleration. 21 of page 9 and describe for the Court your 22 22 Q. And would you please explain for the Court why findings on salinity changes as a result of the 23 23 you chose to include this particular graph in modeling of these scenarios. 24 24 Okay. The model showed that the -- going back to your written direct and how it's relevant to your 25 25 1992 would decrease salinity -- average salinity testimony. The scenario of 2040, however, was -- had a negligible change from the baseline. It was 0.1, which is really within the level of noise of the model. And I considered it to be equivalent to no change.

The conservation scenario had the greatest effect. And it showed that it would decrease both annual and dry season average salinity in Central Bay by as much as 0.7 psu, or practical salinity units, plus or minus the confidence limits.

- 15 Q. Doctor, the Court has heard before during the
 16 testimony of Dr. Greenblatt about the meaning of
 17 ppt. But could you please refresh all of us on
 18 the definition of ppt and how that corresponds to
 19 psu.
- A. Okay. Ppt, or parts per thousand, is a mass concentration that was used for decades, perhaps centuries, in the oceanographic and water quality fields. It was rather difficult to take -- make that measurement because it involved titration of -- in a lab and so forth, so on.

THE REPORTING GROUP

Mason & Lockhart

1 under any of the scenarios that you used show any

2 salinity changes in the bay above 1 psu or 1 ppt

3 as a result of increased flow?

4 A. There may have been individual locations -- in
5 fact, there were individual locations, individual
6 days when the change would have been greater than
7 that. But averaged over weeks and months and
8 averaged over space -- well, just it's enough to
9 say averaged over weeks and months I didn't see
0 any that were larger than those -- that 0.7 is

any that were larger than those -- that 0.7 is
 the highest I saw.
 Q. And, doctor, before we go into the details of

12 Q. And, doctor, before we go into the details of some of your hydrodynamic modeling, I don't want
14 to neglect the second kind of modeling that you did for this case. Can you please describe the
16 second type of modeling work, the numerical modeling work you did, and what that showed.

A. The other -- for many years I have practiced using at least two approaches for every problem.

That way if I should make a mistake or miss a decimal point or there may be something fundamentally wrong with the method in one approach, in using a very different approach I'll catch it.

And so in this case I used the statistical
THE REPORTING GROUP
Mason & Lockhart

And sometime in the 1980's, I think it was, the international community got together and decided that they would change it over to an electrical conductivity standard and just defined the new practical salinity units based on electrical conductivity; that is, sticking a probe into the water, and making it equivalent -- exactly equivalent at 1 ppt and 35 ppt. And then generally they would fit elsewhere.

So most of the -- most of the world has converted to using psu, or practical salinity units. There are still some folks in the U.S., including myself when I forget, that drop back to say ppt.

- **15 Q.** But is psu equivalent to ppt numerically?
- 16 A. For all practical purposes, they are equivalent17 numerically.
- 18 Q. Okay. And, doctor, again, please remind us of19 the range of ppt values in the Apalachicola Bay.
- A. The values in Apalachicola Bay observed data
 ranged from very near zero to 39 psu, which is
 slightly saltier than Gulf water because of local
 evaporation.
- Q. And as you have just described the results ofyour hydrodynamic modeling, did your modeling

THE REPORTING GROUP

Mason & Lockhart

methods to analyze the observed data from the National Estuarine Research Reserve and to formulate actually a set of opinions and results based on those calculations. And then I was able to compare those with the -- those from the physics-based EFTC numerical model. And they confirmed each other. And so the fact that they confirmed each other and were also consistent with my own experience in the Gulf gives me complete confidence in my conclusions.

11 Q. And, doctor, would you consider your hydrodynamic
12 modeling to be more understandable perhaps to the
13 layperson?

14 A. Yes, it is, certainly. It -- the layperson tends
15 to regard it as a black box, but -- but it's -16 certainly, the results look obvious; and people
17 can understand it when they look at the plots.

18 Q. All right. Well, we're going to focus then on a 19 couple of particular -- a particular finding of 20 your hydrodynamic modeling since it is somewhat 21 more understandable to a layperson. And I 22 particularly want to focus on the conservation 23 scenario that you ran. And I also want to focus 24 on some modeling work done by Dr. Greenblatt 25 under a remedy scenario.

THE REPORTING GROUP

Mason & Lockhart

TRIAL - November 30, 2016 (Vol. XVI) 1 You are familiar with the work that was done 1 2 2 by Dr. Greenblatt, as you have testified. Right? 3 A. Iam. 3 4 Q. And are you critical of some of Dr. Greenblatt's 6 A. I am, and I was. I think that Dr. Greenblatt is 6 7 a very bright person and will become a good 7 8 engineer with sufficient experience and good 8 9 guidance on how to approach these problems. 9 10 Q. Regardless of your criticisms of her 10 11 methodologies, are you critical of her findings? 11 12 A. Her -- Dr. Greenblatt's model results were very 12 13 similar to my own. So I'm -- obviously I can't 13 14 say that I'm critical of those results. 14 15 **Q.** And did you find the results of her modeling to 15 16 be results that you would have expected? 16 17 17 A. Yes. 18 18 Q. All right. And, doctor, in particular, I would 19 like to look at Dr. Greenblatt's remedy scenario. 19 Q. 20 20 What was your understanding of Dr. Greenblatt's 21 21 remedy scenario? 22 22 A. My understanding of that -- of Dr. Greenblatt's

23 remedy scenario was that it included a 50 percent 24 reduction in irrigation use of water in Georgia. 25 Plus there were some other conservation measures THE REPORTING GROUP

Mason & Lockhart

A. They show that -- well, let me first quibble.

One of the things that I am critical of her approach was here she used observed flows versus calculated flows. And in the modeling world,

that is -- that's -- that shouldn't be done. It

should be model results compared to model results. So she used observed flows versus modeled, which is not a good idea.

But, again, that's a quibble rather than a criticism of the results, actually.

But what I see here is that over most of Apalachicola Bay, the changes are -- the plot shows all white over most of the bay; so that means changes less than 1 psu. There are areas in July of 2012, for example, that show higher changes of between 1 and 2 psu very close to the river mouth, essentially where the river distributaries discharge into the bay.

So is it your understanding that the white areas on Dr. Greenblatt's map represent salinity changes of less than 1 ppt or 1 psu?

A. That's my interpretation of this plot.

23 Q. All right. Now, doctor, in your work, did you run another conservation scenario that was called 24

25 the 1000 cfs conservation scenario?

THE REPORTING GROUP

Mason & Lockhart

4126

that escape me at the moment. Probably -- I

think it was evaporation control and some other

3 things that were included in that remedy.

Q. And was it your understanding that that remedy 4 5 scenario run by Dr. Greenblatt would result in 6 increased flow into the Apalachicola Bay?

7 A. I believe that I recall that it would, yes.

8 Q. All right. I would like to look now behind tab 4 of the binder that was given to you by counsel 10 for Florida, which has Dr. Greenblatt's written 11 direct testimony. And we'll ask the Court and 12 you, Dr. McAnally, to please turn to pages 36 and 37 where we see Dr. Greenblatt's figures 3-15 and

13 14 3-16.

15 A. Okay.

1

2

9

18

19

20

21

16 Q. And Mr. Smith has helpfully put up both figure 17 3-15 and 3-16 side by side on the screen.

> Is it your understanding, doctor, that these maps show salinity changes in the bay if Florida's proposed 50 percent cut remedy were in place for the years 2011 and 2012?

22 A. Yes.

23 Q. And what do you see with respect to salinity

24 changes on these maps as modeled by Dr. Greenblatt

25 if Florida's remedy scenario were in place?

> THE REPORTING GROUP Mason & Lockhart

A. I did.

2 Q. And I would like to ask you now to turn back to 3 your own written direct testimony behind tab 1, 4 and specifically to look at page 12. And 5 demonstrative 4 -- and Mr. Smith is bringing that 6 up on the screen.

Now, does demonstrative 4 shows the results of your conservation scenario and the modeling that you ran?

A. It does. 10

7

8

9

11 **Q.** And what did you find when you ran your 1,000 cfs 12 conservation scenario?

13 A. I found that all of the changes were less than 14 1 psu. However, I did -- in this graphic, for 15 example, I used a different scheme for creating a 16 color bar; so I was showing down to actually .25 17 and .1 psu, which is the -- about the lower limit 18 of detection. And so mine, therefore, show a lot 19 more color than hers; but they are showing 20 essentially the same results. If I plotted --

21 used her scale, these would have been all white. 22 Q. All right. So if you could use Dr. Greenblatt's

color coding scale, your maps would have been all white?

25 That's correct.

> THE REPORTING GROUP Mason & Lockhart

TRIAL - November 30, 2016 (Vol. XVI) 1 Q. All right. I'm going to ask Mr. Smith to please 1 NOAA data showed that there has been a sea level 2 2 show us your maps as they would have looked if rise during that period. But I also took the 3 they had been coded according to Dr. Greenblatt's 3 tide gage data and analyzed it and found that it 4 color scheme. had -- it had, indeed, risen -- sea level had 5 And Mr. Smith has put up demonstrative --5 risen during that period from 2002 -- actually, 6 what we keyed as demonstrative 4 shows your maps 6 from 1992 to 2014; but particularly I looked at 7 color-coded according to Dr. Greenblatt's color 7 2002 to 2014. And it showed that it had risen. 8 scheme; is that right? 8 **Q.** And is it your opinion that sea level rise will 9 A. That's correct. 9 have an impact on future salinity levels in the 10 Q. All right. 10 11 MS. DeSANTIS: I would like to ask that 11 It most certainly will. 12 both this particular map be put side by side 12 **Q.** And what is the basis for that opinion? 13 with Dr. Greenblatt's maps from figures 3, 13 A. It -- that's sort of like asking what is the 14 dash -- figure 3-15, which are her results 14 basis of my opinion the sun is going to rise 15 from 2011. 15 tomorrow? BY MS. DeSANTIS: 16 16 The literature is unanimous to that effect. 17 Q. Now, Dr. McAnally, when you look at your maps on 17 I cited some literature about Apalachicola Bay in 18 18 the left using your conservation scenario of my report. It's -- that's been a result of, for 19 1,000 cfs -- additional 1,000 cfs of flow next to 19 example, my experience in Louisiana where land 20 20 Dr. Greenblatt's maps for 2011 showing the 50 subsidence has introduced an apparent sea level 21 21 percent cut remedy resulting in increased flow, rise that is much accelerated over what we see 22 22 elsewhere in the Gulf. And so in those cases we what do you see with respect to salinity changes 23 in the bay under each of these two remedy or 23 see the morphological changes. We see the 24 conservation scenarios? 24 sediment deposition, and we see the shoreline 25 25 extend inland. In every single case that I'm A. I see the same as my conclusion in my testimony, THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4130 4132 1 and that is is that the conservation scenario --1 aware of, salinity has increased, sometimes 2 and it turns out her remedy scenario -- both 2 precipitously. 3 produce changes of less than 1 psu in 3 **Q.** Doctor, could you please turn again, tab 1, your 4 Apalachicola Bay. 4 written direct testimony, to page 26, and 5 5 Q. Okay. Doctor, I want to turn now to sea level particularly to your demonstrative 10. Can you 6 6 explain, please, what this particular graph 7 A. I'm sorry. Let me correct that. About 1 psu in 7 shows. 8 8 hers. A. Okay. Page 26? 9 **Q.** Approximately 1 psu? 9 Q. Page 26, demonstrative 10, which is on the 10 10 screen. A. Approximately 1 psu, yes. 11 11 **Q.** So whether you run the remedy scenario by Α. This shows a range of potential projections of 12 12 Dr. Greenblatt or your scenario based on the salinity increases from 1992 forward based on, 13 13 1,000 cfs additional flow, you are seeing first of all, two levels of -- of projected sea 14 comparable salinity changes in the bay? 14 level rise. One, the low estimate by the Corps 15 A. Yes. They are comparable. 15 of Engineers; the other, the high estimate by 16 Q. Doctor, let's talk about sea level rise. And you 16 NOAA, which happens to be the same as that for 17 also, as part of your work in this matter, 17 the Corps of Engineers. And then in addition to 18 analyzed the impact of sea level rise on salinity 18 those -- that range of sea level rise rates, I 19 in the bay, as you testified; correct? 19 have applied the -- a low estimate of my 20 A. Correct. 20 calculations showing the effect of sea level rise 21 **Q.** And can you please explain the basis for your 21 on salinity and a high -- higher rate, not the 22 22 opinion that there has been a sea level change in highest rate. But these are extremely 23 23 the bay in the years that you analyzed up to conservative estimates of the band that would be 24 most likely experienced by average salinity in 24 2014? 25 A. Okay. I took the two methods actually, but the 25 central Apalachicola Bay in the future due to sea THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

TRIAL - November 30, 2016 (Vol. XVI) Florida v. Georgia 4133 4135 1 level rise. 1 and got a difference in the two values. 2 2 Q. And which of these bands shown do you believe to So mine was a discrete analysis of the 3 be the most likely? 3 difference of the rise in -- over that 12, 4 A. I strongly believe that the highest is the 13-year period, whereas, NOAA's was a weighted most -- that the actual experience is going to be 5 average that goes back decades. 6 much closer to the high estimate than it is to 6 Q. Now, Dr. McAnally, in her testimony in this court 7 the low estimate. 7 Dr. Greenblatt suggested that changes in inlet 8 Q. And on what do you base that opinion? 8 size will offset the impact of sea level rise on 9 A. I base that on the fact that the National Academy 9 salinity in the bay in the future. Is she right? 10 of Sciences has provided a method to project sea 10 Α. No, she's not. It betrays, frankly, a lack of 11 level rise in the future and based on IPCC 11 knowledge of coastal processes, and in particular 12 estimates. 12 those for -- of those of bay estuaries with 13 IPCC -- I'm putting in too many C's. IPCC 13 multiple inlets. 14 estimates in the past have been shown to be too 14 They are very dynamic systems. And so, for 15 low. They're being too conservative. And in the 15 example, if they get narrower, if a tidal inlet 16 2013 report, they were -- they were corrected for 16 gets narrower, usually the tidal currents will 17 the effect of Greenland ice sheet melting. And 17 scour it deeper so that the total exchange 18 18 they -- it increased the values. They did not remains about the same. We have seen this over 19 include the effect of accelerated West Antarctic 19 and over again throughout the world. So it does 20 20 ice sheet melting. And I am -- I read the not follow that as an inlet narrows, it would 21 21 literature on that; and I am virtually certain also become more shallow. In fact, it's usually 22 22 that when the next update occurs in the IPCC the reverse. 23 report and which would then be translated into 23 Q. Did Dr. Greenblatt or any other expert for the the Corps' and NOAA's projections, that the 24 24 State of Florida report on any modeling done 25 number will be higher still. And so I think it 25 regarding changes in inlet size and the effect on THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4134 4136 1 will be pushing certainly the upper limit of this 1 salinity in the bay? 2 and perhaps being even higher than my high 2 Α. No. And that's -- that's one of the star 3 3 projection. differences. Drs. Greenblatt and Douglass did no Q. Dr. McAnally, when Mr. Leopold was questioning 4 4 modeling, did no calculations of the effect of 5 5 sea level rise on salinity. Instead, they were you, he was asking you to compare what you termed 6 6 apples and oranges concerning some sea level rise speculating. And, in fact, Dr. Douglass, to his 7 7 data. Would you please explain why Mr. Leopold credit, said likely. And I think even in using 8 was asking you to compare data that should not be 8 that word likely, he was -- he was overstepping 9 9 compared? what he should have concluded. 10 A. Okay. The -- well, the data that was shown on 10 But neither one of them performed any actual 11 11 NOAA's website are calculated by a prescribed calculations. They simply speculated, whereas, 12 formula that all of us involved in coastal 12 I performed detailed calculations; so did 13 13 engineering are familiar with that -- but it Drs. Freeman and Huang and Clough. And they all 14 involves long-term averages of many values per 14 came to the same conclusion I did when they made 15 day. And so as a result, the 2015 value is --15 their calculations saying that salinities would 16 inherits all of the tendencies of the data going 16 increase as a result of sea level rise. 17 back to the start of the -- of the gage. And in 17 **Q.** Dr. Greenblatt also suggested in her testimony in

that case, I -- it's sometime in the 1960's, I think, for the Apalachicola Gage. So that 2015 value is, in fact, a very long-term average over decades and reflects the weight of all that has happened before.

What I did was I took two distinct dates, 2002 and 2014, and said, what was the mean sea level on these two years? And I compared those

THE REPORTING GROUP

Mason & Lockhart

18

19

20

21

22

23

24

25

21 A. Absolutely not.

22 Q. And why not?

23 Α. First of all, the nature of sedimentation from 24 the river is that the vast majority of that 25 sediment will settle out in the delta. That is

this court that sedimentation will offset the

future in the bay. Is she correct about that?

impact of sea level rise on salinity in the

THE REPORTING GROUP

Mason & Lockhart

18

19

20

very close to the mouth of the river. And this is a pattern that we see over and over again throughout the world. And so it does not go out and deposit in the bay. There are -- there's a certain fraction that's very light, settles very slowly, and that would tend to be washed out.

And, in fact, if we look at the bottom sediments in Apalachicola Bay, we see that that's the case. It's primarily beach sand and shell fragments throughout much of the bay with a few spots of fine sediment.

So there's that. There's also the fact that, again, my experience in other estuaries in which -- for example, Atchafalaya Bay, there is massive sedimentation going on in Atchafalaya Bay. The barrier islands did move and were submerged by sea level rise, and salinity increased steadily throughout the system.

And I have -- I have seen that. I have documented it. I have experienced it.

So both the -- from basic physics and from my own personal experience I can say that Dr. Greenblatt is totally incorrect when she says that bay sedimentation would offset salinity increases.

> THE REPORTING GROUP Mason & Lockhart

RECROSS-EXAMINATION

2 BY MR. LEOPOLD:

Q. Dr. McAnally, just a couple more questions.

You just testified that you have seen the 5 effects of geomorphic changes in other parts of

6 the Gulf of Mexico. Right?

7 Α.

13

2

5

10

12

13

18

25

8 **Q.** And, sir, you agree that geomorphic processes

9 exist. Correct?

10 A. Geomorphic processes do occur.

11 **Q.** Okay. And, yet, you didn't model any geomorphic

12 processes other than the narrowing of the pass

inlets that Dr. Douglass suggested. Right?

14 A. That was the only geomorphic change that I 15 modeled.

16 **Q.** And you agree though that sedimentation has the

17 effect of elevating the bottom of Apalachicola

18 Bay. Right?

19 Α. No, I did not.

20 Q. And there is published data that shows a rate of 21 sedimentation in Apalachicola Bay. Correct?

22 A. There is some very old data that shows the rate 23 of sedimentation.

24 **Q.** And because you thought it was old data, you made

25 no assumption whatsoever for sedimentation rate.

> THE REPORTING GROUP Mason & Lockhart

4138

Q. Should there be any credence given to an opinion

that the migration of barrier islands will

3 protect the bay from sea level rise and

4 increasing salinity levels?

5 A. I'm trying to think of a case where that has ever

6 actually occurred. And I have seen a lot of

cases -- a lot of situations, projects, where

8 barrier islands migrated; but I have never seen

9 where they strongly affected the salinity within 10

the estuary behind them. So I don't think

11 there's any particular reason to give credence to

that speculation.

13 **Q.** And, doctor, to your knowledge did Dr. Greenblatt

14 or any other expert for the State of Florida do

15 any modeling to support an opinion that

16 sedimentation or migration of barrier islands

17 will offset the effects of sea level rise on

18 salinity in the bay?

19 A. I have not seen anything that Dr. Greenblatt and

20 Dr. Douglass did that would suggest or that they

21 actually did any calculations at all on the

22 subject of the effects of bay sedimentation or

barrier island movement on salinity.

24 **Q.** Thank you, doctor.

MS. DeSANTIS: I have no more questions.

THE REPORTING GROUP

Mason & Lockhart

1 You assumed a zero sedimentation rate in your

model. Correct?

3 A. No. That is not correct.

4 **Q.** You assumed no sedimentation to the bottom of

Apalachicola Bay; isn't that true?

6 A. That is not -- that is not true.

7 Q. And -- so you didn't address in your model,

8 Dr. McAnally, what the effects of sedimentation

9 are going to be in the bay and whether it would

offset sea level rise. Correct?

11 A. I did not model the deposition of sediment in the

bay because I knew that it would occur up in the

delta and have little or no effect on salinity in

14 Central Bay.

15 **Q.** Okay. And, now, turning to the remedy discussion

16 regarding Dr. Greenblatt's modeling, the maps

17 that Ms. DeSantis just showed you indicate the

magnitude of change in salinity based on the

19 remedy scenario. Right?

20 Α. That's -- that's what they show.

21 **Q.** But those maps don't show the persistence of the

22 change in salinity over time. Correct?

23 Α. Actually, they do because they show month by

24 month what those -- what those changes are. So

you can -- by looking at the month, you can draw

4		4145 binders?	1	0	4147
1				u.	For consumptive use are you looking at other time
2	DV.	Thank you.	3	٨	frames?
3	_	MS. WINE:		A.	I modeled the time frame that we're talking
4	Q.	Dr. Menzie, you offered opinions in this case	4		about using the information provided me from
5		regarding the ecological effects of water	5		Dr. Bedient; but I have considered the influence
6		consumption by Georgia in the floodplain and	6		of consumptive use that's reflected in the
7		forest of the Apalachicola River and on the	7		other Florida's experts for other time periods
8		productivity of the Apalachicola Bay. Is that	8	_	in my response to their expert reports.
9		correct?	9	Q.	Okay. But for the work that you did initially
10	Α.	That's correct.	10		putting aside any responses to the work that
11	Q.	And you looked at Georgia's incremental increase	11		Florida's experts did, for the work that you did
12 13		in consumption between 1992 and 2011; is that	12 13		it was limited to this incremental time period
14	۸	correct? That is correct.	14	٨	1992 to 2011?
15			15		That's correct. For the modeling work.
	Q.	And by incremental increase, you mean that you	16	Q.	Okay. Now, you also analyzed two future or conservation scenarios from Dr. Bedient.
16 17		considered only the additional amount of water	17		Correct?
18		consumed by Georgia between 1992 and 2011. Correct?	18	٨	I looked at the 1,000 cfs conservation scenario.
19	٨	For the modeling analysis that you're referring	19		Correct. And I think you also looked at a 400
20	Α.	to; that is correct.	20	Q.	cfs conservation scenario?
21	Q.	•	21	Α.	No. What I did was I separate from any work
22	Œ.	consumptive use prior to 1992. Correct?	22	Λ.	that Dr. Bedient has done, I independently looked
23	Λ	I haven't used the modeling results to take a	23		at the influence of 400 and 1,000 cfs that would
24	Λ.	look at that; that is correct.	24		be applicable to any point in time prior to or
25	0	Okay. And you haven't analyzed the impact of	25		after 1992.

TRIAL - November 30, 2016 (Vol. XVI) 4155 1 Q. But, sir, your report -- your prefiled direct factors constant? 2 testimony does not tell this Court has Georgia's 2 Α. What they kept the same between the comparisons 3 water consumption between 1970 and 1992 impacted 3 were the underlying flow regime, which included 4 the Apalachicola River and Bay. Correct? 4 Georgia's consumption of water. So what they 5 A. That's right. 5 were comparing, including Georgia's consumption 6 Q. Now, I would like to talk about some of your 6 of water, what was difference or what biological 7 specific opinions on the impact of streamflow on 7 effect there might be associated with differences 8 certain riverine species. Okay? 8 in the operation of the reservoirs to look at 9 And you understand that riverine species are 9 whether or not those changes in the operations 10 just species that live, for example, on the 10 might pose a -- some form of risk to the species 11 Apalachicola River. Correct? 11 that were in the river. 12 A. That's correct. 12 Q. The Service wasn't analyzing the impact of 13 **Q.** Now --13 changes in consumptive use on the ecosystem. 14 A. I'll understand it as such. 14 Correct? 15 Q. Okay. Thank you. 15 That wasn't their focus. They incorporated that 16 16 Now, you claim that incremental water in their analysis. 17 consumption by Georgia since 1992 has had at most 17 **Q.** Okay. Now, let's look at some of the things that 18 18 a negligible impact on the Gulf sturgeon the Service did find in the biological opinion. 19 population in the river. Correct? 19 So if you could turn to tab 2 of your binder. 20 20 A. That's correct. Tab 2 is JX-72, which is the 2012 biological 21 Q. And you conclude that anticipated future 21 opinion. You recognize this document. Correct? 22 22 A. I do. consumptive use by Georgia is expected to have a 23 negligible effect on threatened and endangered 23 Q. And, sir, if you could please turn to page 144. 24 mussel species. Correct? 24 A. I'm there. 25 A. That's correct. 25 Q. And, sir, do you see the section 7.1 at the THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4154 4156 1 Q. And in your direct testimony, you cite as the 1 bottom? Α. 2 basis for both of these opinions the 2012 and the 2 Yes. 3 2016 biological opinions of the U.S. Fish and 3 **Q.** If could you look at the last paragraph of the 4 4 Wildlife Service. Correct? page which begins, take of listed mussels, and 5 5 A. Among other -- among other considerations; that's just read that to the end. It continues on 6 correct. 6 page 145. 7 Q. Now, you understand that for the biological 7 A. I have read it. 8 8 opinions, the Service attempted to isolate the Now, sir, you understand from that that the U.S. 9 effect of reservoir operations and hold all other 9 Fish and Wildlife Service found that mortality, 10 10 factors constant. Correct? either immediate or delayed, may occur when flows 11 11 at Woodruff Dam fall below 10,000 cfs. Correct? A. I understood that they represented what they 12 12 Α. believed to be the flows that would be present in Actually, this particular sentence needs to be 13 13 the river under all other influences, including understood in the context of what their full 14 consumption of water by Georgia, and then 14 analysis is. And basically what this means is 15 compared the differences in reservoir operations 15 that there has been circumstances during which 16 with that as an underpinning. 16 mussels have come to occupy areas during higher 17 **Q.** So Georgia's water consumption was one of those 17 flows. And when those flows decrease, such as 18 other factors that were held constant by the 18 below 10,000 cfs, some of those mussels are 19 Service in its analysis. Correct? 19 stranded. And when they're stranded for an 20 A. I think the Service represented the flows and, 20 extended period of time, they can die. So that's 21 21 you know, the consumption history of Georgia the context. 22 within their analysis. It wasn't held as a 22 It's not always the case, but it's the 23 23 constant number. context by which this reference comes from. 24 Q. Sir, you don't recall that they were isolating 24 Yes. And the Service says that the harm can 25 the reservoir operations and holding the other 25 occur at flows less than 10,000 cfs as a result THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

- 1 of reduced growth and/or reproduction due to high
- 2 temperatures and low dissolved oxygen. Correct?
- 3 A. Right. The causes of mortality in mussels that
- 4 are stranded would either be direct exposure,
- 5 they might be eaten by animals, or the dissolved
- 6 oxygen in remnant pools might decrease. But this
- 7 would occur under any circumstance where flows
- 8 were changing from a higher flow to a lower flow.
- 9 Q. Okay. Now, sir, if you could turn to page 151 of
- 10 this document. Do you see the section 8 titled
- 11 Conservation Recommendations?
- A. Yes. 12
- 13 **Q.** And, sir, if you could read the paragraph that's
- 14 numbered 3 in that section to yourself.
- 15 A. Yes.
- 16 **Q.** Now, sir, you understand from this that the U.S.
- 17 Fish and Wildlife Service was recommending the
- 18 reduction of overall streamflow depletions in the
- 19 ACF Basin, particularly on the Flint River.
- 20 Correct?
- 21 A. Let me read that again with regard to your
- 22 question.

- You said recommending reductions?
- Q. Correct. This is under a section called 24
- 25 Conservation Recommendations.

THE REPORTING GROUP

Mason & Lockhart

4158

- 1 A. Right. I read that as the Fish and Wildlife
- 2 **Service under Conservation Recommendations**
- 3 suggesting that the states work together to look
- for alternatives. 4
- 5 **Q.** And one of those alternatives is reducing overall
- 6 streamflow depletions in the ACF Basin,
- 7 particularly on the Flint River. Correct?
- 8 A. That's included as an example that water users
- 9 and managers can work together to identify
- 10 alternatives to agricultural use -- to reduce
- 11 agricultural use of water in the Flint River
- 12 Basin, yes.
- 13 **Q.** So the answer to my question is, yes, that was
- 14 one of the recommendations?
- 15 A. Well, that's something they're recommending that
- 16 the states consider. I don't think they're
- 17 suggesting that with regard to their biological
- 18 opinion.
- 19 **Q.** Sir, do you see right there in No. 3 it
- 20 recommends work in consultation with the states
- 21 and other stakeholders to assist in identifying
- 22 ways to reduce overall depletions in the ACF
- 23 Basin, particularly the Flint River. Correct?
- 25
- Q. Okay. Now, sir, let's look at tab 3, which is THE REPORTING GROUP

Mason & Lockhart

- 1 the 2016 biological opinion. It's JX-168. And
- 2 if you could, sir, first, please turn to page 74.
- 3 And, sir, are you there?
- A. Iam.
- Q. Okay. At the bottom of that page, do you see
- 6 there is a section about juvenile sturgeon?
- 7 Yes, I do.
- 8 Q. And, sir, if you could just read that paragraph
- 9 that continues onto page 75.
- 10 A. I have read it.
- 11 Q. Okay. So, sir, do you see that the Service there
- 12 finds that very young juvenile Gulf sturgeon have
- 13 a lower tolerance for saline conditions than
- 14 sub-adult or adult surgeon. Correct?
- 15 Α. What's being reported here is from the
 - literature; and, yes, what they are pointing out
- 17 is that the younger sturgeon may be more
- 18 sensitive to salinity. That's correct.
- 19 **Q.** And they cite a study that observes 100 percent
- 20 mortality of 72-day-old juvenile sturgeon when
 - exposed to 10 ppt salinity. Correct?
- 22 A. That's what the -- this particular experiment
- 23 showed.

16

21

2

- 24 **Q.** And then the Service goes on to say that
- 25 conditions like lower salinity in foraging areas

THE REPORTING GROUP

Mason & Lockhart

1 may be vitally important to the growth and

- survival of young-of-the-year juvenile sturgeon.
- 3 Correct?
- A. That's what they say. Yes, that's correct. 4
- 5 **Q.** And, sir, you know that changes in streamflow can
- 6 affect salinity regimes. Correct?
- 7 A. I do.
- 8 Q. Okay. Now, could you turn to page 86 of this
- 9 document. And if you could, sir, do you see the
- 10 section that says Interpretation, in italics?
- 11 Right under the figure.
- 12 A. I got it.
- 13 Q. Okay. If you could read those two paragraphs to
- 14 yourself, please.
- 15 A. I have read it.
- 16 Q. And, sir, do you see here that the Service is
- 17 saying that reduced floodplain inundation, even
- 18 small reductions on the order of 4.7 to 6.3
- 19 percent, can have an adverse effect on Gulf
- 20 sturgeon. Correct?
- 21 A. I don't think that's a conclusion that they have
- 22 reached. I think that -- when I read this, I
- 23 read this as a -- populating a concern, because I
- 24 know that there is no evidence that these have
- 25 had effects on sturgeon in the Apalachicola

THE REPORTING GROUP

Mason & Lockhart

4160

4161 4163 1 River. A. -- in the paragraph? 2 2 **Q.** Sir, using your words then, the Service is at Q. I'm trying to move quickly since it's similar 3 least concerned that reduced floodplain 3 language. 4 inundation, even in very small percentages, can Α. Okay. All right. 5 have an adverse effect on Gulf sturgeon? I was just asking if it's similar language. 6 A. My reading of these parts of the document is that 6 It begins with a similar sentence. 7 it's incumbent upon the Service to identify 7 So if you can look at page 201, this is the 8 aspects of the operation that could be an issue 8 conservation and recommendations of the 2016 9 and to articulate what those are. It's when they 9 biological opinion? 10 reach their conclusions about the overall effects 10 A. Yes. 11 of operations that you get the -- sort of the net 11 Q. And, sir, if you could turn to page 203, which is 12 outcome of their deliberations and analysis. 12 a continuation of the listing of these 13 So --13 recommendations. And if you could read numbers 8 14 Q. Sir, I'm just asking if you see that concern 14 and 9 to yourself, please. 15 stated there by the Service? 15 And --16 A. I have. 16 A. I see that concern stated there, and I understand 17 what it means and what it doesn't mean. 17 Q. And, sir, do you see here the Service is 18 18 **Q.** Sir, could you please now turn to pages 136 and recommending water conservation measures to avoid 19 137 of this document. 19 impacts to fish and wildlife resources by working 20 20 with municipal, agricultural, and industrial A. I'm there. 21 21 Q. And, sir, do you see that on these two pages water users to reduce consumptive uses. Correct? 22 22 A. Yes. there's a discussion of fish hosts? 23 23 Q. And that the Service also recommends planning A. Yes. 24 **Q.** And, sir, fish hosts encompasses fish other than 24 future water management to minimize consumption 25 just the Gulf sturgeon. Correct? 25 and thus minimize the detrimental effects on THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4162 4164 A. That's correct. 1 species from consumptive water use. Correct? 2 **Q.** And, sir, if you look at page 137 of this 2 A. That's what it says. 3 3 Q. Thank you. document, the paragraph that starts, although 4 mussels. It's the second paragraph. Do you see 4 Now, sir, I would like to talk about your 5 5 that, sir? opinion on the impact of Georgia's water 6 A. Yes. 6 consumption on the inundation of the Apalachicola 7 Q. Do you see that in the second line the Service is 7 River floodplain. Okay? 8 saying that reproduction of many fishes is 8 Yes. By inundation you mean flooding --9 intricately tied to the floodplain. Do you see 9 Q. I was just going to ask you that. 10 10 that, sir? Α. -- of the floodplain? 11 11 Q. Are you referencing the water level of the A. Yes. 12 **Q.** And that flow regimes can affect reproductive 12 floodplain that surrounds the Apalachicola River? 13 success and other attributes of these fish? 13 A. I am. Q. And you testify in your prefiled direct that 14 A. Right. 14 15 Q. Now, sir, could you please turn to page 192 of 15 floodplain areas are connected to the river via 16 this document. Do you see there there is a 16 sloughs or channels. Correct? 17 section on mussels. And we don't need to look at 17 A. That's correct. 18 it in detail again, but you will see similar 18 And that during low flows, water levels can fall 19 language that we looked at from the 2012 19 below the mouth of the sloughs. Correct? 20 20 biological opinion. Correct? Α. That's right. 21 21 A. Yes. And that that can be harmful to the floodplain 22 22 Q. Now, sir, lastly, if you could turn to page 201 and the floodplain habitats. Correct? 23 23 of this document. Α. Well, what that means specifically is that once Were you asking whether I agreed with what was --24 that happens, the water is not flowing into the 24 Α. 25 floodplain via that slough, yes. 25 Q. No, no, no. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

16

1165

- **1 Q.** And that can result in harm to those habitats?
- 2 A. It could be a period during which there is
- dryness. But that happens -- you know, that
- 4 would happen also under natural conditions. So
- it's -- it would depend on the matter of degree.
- **6 Q.** Sure. But those times of dryness can have
- **7** adverse impacts on the habitats in those sloughs.
- 8 Correct?
- 9 A. That is a time when there's such a potential.
- 10 But it doesn't necessarily mean that that has
- 11 happened.
- **12 Q.** I'm just asking if it's a possibility?
- 13 A. Is it a possibility?
- 14 Q. Yes.
- 15 A. It's a possibility, yes.
- **16 Q.** Okay. Now, to the contrary, when flow increases,
- 17 the inundation expands beyond the boundaries of
- 18 the slough stream beds; is that correct?
- 19 A. That's correct.
- ${\bf 20} \quad {\bf Q.} \quad {\rm And \ that \ can \ be \ beneficial \ to \ the \ floodplain \ and}$
- 21 the floodplain habitats. Correct?
- 22 A. Again, that provides the water that some of the
- 23 plants in the floodplain require to continue to
- 24 grow, yes.

1

19

25 Q. And there are over 300 sloughs in the

THE REPORTING GROUP

Mason & Lockhart

4166

- Apalachicola River. Correct?
- 2 A. That's my understanding.
- **Q.** Now, Dr. Menzie, if hypothetically all of the
- 4 sloughs in the Apalachicola River were
- **5** disconnected or cut off, that would decrease
- **6** floodplain inundation. Correct?
- 7 A. Under that hypothetical, yes. If you blocked all
- 8 the sloughs with sediment or something of that
- 9 nature, you would -- you would have that -- an
- 10 adverse effect.
- 11 Q. And that would have a harmful impact on the
- floodplain, including that it would contribute to
- the drying of the floodplain forest. Correct?
- 14 A. Yes. Blockage of all the sloughs would have an
- 15 adverse effect upon the floodplain.
- 16 Q. And it would decrease habitat for species that17 depend on the floodplain forest?
- 18 A. It would turn the floodplain forest from a wet
- 20 Q. Now, turning back to your prefiled direct

forest to a dry forest.

- 21 testimony, you note that USGS researchers have
- **22** found floodplain inundation has declined since
- the 1970's. Correct?
- 24 A. I believe they -- that's correct, yes. It's been
- 25 a long-term decline.

THE REPORTING GROUP

Mason & Lockhart

- ${f 1}$ ${f Q}$. And the forest ecosystem of the floodplain is an
- **2** important habitat for many species. Correct?
- 3 A. It does provide habitat for many species.
- 4 Q. And trees can be an indicator of changes in the5 ecosystem?
- 6 A. In this particular case where we're talking about
- 7 flooding, trees can be an indicator of changing
 - from wetter to drier environments.
- **9 Q.** And you believe that there has been a shift in
- 10 the Apalachicola River floodplain towards tree
- 11 species that are characteristic of a drier, less
- 12 inundated habitat. Correct?
- 13 A. I do believe that has occurred.
- **14 Q.** And as an example, there's been a change in the
- **15** abundance of tupelo trees and the production of
 - tupelo honey from those trees. Correct?
- 17 A. There's definitely been a change in the abundance
- 18 of tupelo trees.
- **19 Q.** Okay.
- 20 A. The production of honey is influenced by a lot of
- 21 factors
- **22 Q.** Now, you conclude that the changes in floodplain
- forest composition that have been detected since
- the late 1970's are linked to changes in the
- 25 extent and duration of floodplain inundation.

THE REPORTING GROUP

Mason & Lockhart

4168 Correct?

- 1 Correct?
 2 A. Well, I believe that the changes occurred prior
 - 3 to the 1970's. So the 1970's changes continued;
 - 4 but they had begun well before that as -- as the
 - 5 U.S. Geological Survey has pointed out.
 - But, yes, those changes that have occurred
 since the construction of the dam are related to
 - 8 a decline in the flooding of the floodplain.
- **9 Q.** Well, you agree that riverflow and floodplain
 - inundation are related. Correct?
- 11 A. They are related.
- 12 Q. Okay. And you didn't consider the impact of
- **13** Georgia's consumptive use on riverflow until 1992
- **14** despite these changes in floodplain inundation
- that you know began in the late 1970's. Correct?
- 16 A. I have actually looked at the influence prior to
- 17 that. I think the earliest years I looked at
- 18 were around 1996.
- **19 Q.** Okay.

10

- 20 A. But not prior to 1970, no.
- 21 Q. Okay. Now, do you recall that in the report you
- submitted in this case, you included a figure
- 23 that showed changes in floodplain inundation
- 24 between 1922 and 2015?
- 25 I can help you out if you don't remember.

THE REPORTING GROUP

4169 1 A. Yes. 1 because it's averaged over the previous number of Q. I don't think it was in your prefiled direct; but 2 2 years. If we were to look actually at the most 3 if you could in the binder, turn to tab 9. 3 recent level of inundation, it would be, you 4 And what we have done in tab 9, just to try know, not at that depth. 5 to save a little paper, we have just included 5 Q. Well, sir, looking at this chart, the beginning 6 some excerpts of your report, because it was 6 of the decline in floodplain inundation occurred 7 quite lengthy. 7 during a wetter period. Correct? 8 So if you just turn, like, one page in here, 8 A. Yes. There was a wet period in this region. 9 do you see that we have got page 85 from your 9 From somewhere in the 1960's to 1970's, the 10 report excerpted here? 10 amount of wetness increased in the region. 11 A. Yes. 11 Okay. So something other than climate was 12 Q. And it has a chart. Do you see that chart with 12 causing the dramatic decline which began in the 13 the blue line that says climate year underneath? 13 late 1970's. Correct? 14 It's figure 26. 14 A. No. It was climate. 15 A. Yes, I do. 15 **Q.** Sir, the decline began during a wet period. 16 16 Q. Okay. Now, in this chart you were showing annual Correct? 17 acreage of floodplain inundation from 1922 to 17 Well, as I just explained, the trend line is 18 2015. Correct? 18 affected mainly by the droughts that are 19 A. Yes. I have. 19 occurring. So the -- if you look at the seesaw 20 20 **Q.** And you include a trend line here. Correct? in numbers that are going up and down, these 21 21 A. That's correct. sharp points that you see periodically occurring, 22 22 **Q.** And you state that the trend line of these data one in the '80's and one in the late '90's, and 23 indicates that floodplain inundation has changed 23 then, of course, the more recent one, it's those 24 over time with a pronounced decline in annual 24 low points that are dragging the line down. 25 inundated floodplain acres since the 19 -- since 25 That's climate. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4172 4170 1 the late 1970's. Do you see that that's right 1 Q. Sir, you don't know if the cause of this trend 2 2 above the figure? line had anything to do with Georgia's 3 A. Yes. 3 consumptive use; do you? **Q.** And that this decline is consistent of the period A. I don't believe it does. 4 4 5 over which changes in floodplain forest and 5 Q. Okay. But you don't know? 6 6 You didn't do that analysis. You didn't declines in tupelo honey production were 7 observed. Correct? 7 analyze what was going on with Georgia's A. Correct. 8 8 consumptive use starting in 1970 when their 9 Q. And the decline continues through 2015 on your 9 agricultural use also started to dramatically 10 10 increase at this time. Correct? figure 26. Correct? 11 A. That's correct. 11 Can you reask me that question? 12 Q. And the post-1970's period includes both time of 12 Q. Sure. You didn't analyze the impact of Georgia's 13 13 drought on the one hand and naturally wetter consumptive use starting in 1970 when we know 14 periods on the other. Correct? 14 that its agricultural consumptive use increased 15 A. Right. So --15 dramatically? 16 Q. I'm just --16 You didn't look at the impact of that 17 17 consumptive use on the floodplain, at least not A. At this point. 18 Q. I just want to be clear that the years included 18 until starting in 1992. Correct? 19 all the years, whether they were dry years or wet 19 Α. Right. I have looked at dates prior to 1990 --20 20 years. Correct? to those periods of time; but you're correct that 21 21 A. Right. At this point though when you ask about I did not try to separate out the influence of 22 22 the decline, you're looking at the trend line. irrigation in the 1970's in any particular way. 23 23 And just so that the Court is clear about the Q. Okay. Now, sir, I want to talk now about your 24 trend line, it's an average over many years. 24 opinion regarding the impacts of Georgia's 25 So when you say going through 2015, it's 25 consumptive use on species in the Georgia portion THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

1 of the ACF Basin. Okay?

2 A. Okay. I did not study that, but I would be happy 3 to discuss it with you.

4 Q. You didn't put it in your prefiled direct

5 testimony, but you included discussion of that in

6 your expert report. Correct?

7 A. Insofar as Dr. Allan was talking about it, that's

the first time I noticed anybody talking about

9 resources in Georgia in a case that involved

10 Florida. So I responded to Dr. Allan.

11 Q. Okay. And do you recall stating in your report

12 that factors other than the low flow were

impacting species like mussels in the Lower Flint

14 River Basin -- the Georgia portion of the Lower

15 Flint River Basin?

16 A. I don't recall saying factors other than the low

17 flow.

8

18 Q. Sir, if you could, please, turn back to tab 9,19 which are excerpts from your expert report. And

which are excerpts from your expert report. And

20 do you se at the bottom of the paragraph on that

21 page that is the continuation -- it's the first

paragraph on the page. It says, clearly factors

other than low flow events affect mussel

distribution and abundance in the Lower Flint

25 River Basin.

1 A. There are literature on the Flint River Basin;

and I believe that the literature, in addition to

3 low flow, talks about substrate type, all the

types of things that would normally affect the

5 distribution of mussels.

6 Q. And, sir, have you reviewed the literature that

looks at the impacts of the flow in the Georgia

8 portion of the Flint River Basin?

9 A. I haven't.

10 Q. And, sir, if you could then, please turn to tab 4

in your binder. Tab 4 is a document marked

12 FX-50. And it's an article titled Effects of

13 Reduced Summertime Streamflows on In-stream

14 Habitat in the Lower Flint River Basin, Georgia,

15 U.S.A. Do you see that?

16 A. I see it.

17 Q. Are you familiar with this article, sir?

18 A. I may have seen this in general reviews; but it's

19 not something I used in my -- for my -- forming

20 my opinions.

 ${f Q.}~~{f Q.}~~{f Do}$ you see that the authors are affiliated with

the Jones Ecological Research Center in Newton,

23 Georgia?

24 A. Yes.

Q. And the National Park Service in Athens, Georgia?

THE REPORTING GROUP

Mason & Lockhart

1 A. Yes, I see that.

2 Q. And do you see that this was part of a Georgia

water resources conference in 2015?

4 It says that after where it says reference.

5 A. Yes.

Q. Now, could you please look at the abstract and

7 look at the first two sentences of the abstract.

8 Just please read those to yourself.

9 A. I'm finished reading that.

10 Q. And, sir, do you see that the authors are looking

at the relationship between the increase in

12 agricultural irrigation in Georgia and diminished

flows in the Lower Flint?

14 A. I see that that's what they're studying.

15 Q. And they're looking at the impact of those

reduced flows on the river habitat. Correct?

17 A. That's what they're looking at.

18 Q. Now, if you could review the paragraph just below

the figure on that same page, the paragraph that

20 begins, the Lower Flint River Basin. Please just

review that and let me know when you're done.

22 A. Okay. I'm finished reading that paragraph.

23 Q. And do you see there, again, the authors are

identifying the rapid expansion of water use for

irrigation during the '70's. Correct?

THE REPORTING GROUP

Mason & Lockhart

4176

1 A. I see that's what these authors are looking at.

2 Q. And they state that the current levels of

3 agricultural pumping are associated with reduced

summertime flows, particularly in droughts.

5 Correct?

6 A. I see that's what they're writing about, yes.

7 Q. Okay. Now, if you could turn to the next page

8 and read the paragraph under Data Analysis.

9 A. Yes. I have finished reading the data analysis

piece.

11 Q. Okay. And you see there the authors are looking

at habitat inundation at a reach on

13 Ichawaynochaway Creek in the Flint River Basin in

14 Georgia, Correct?

15 A. Right. I understand that this is all about the

16 Flint River and its resources, and I did not

17 include assessment of the Flint River as part of

looking at the claims with regard to the

19 resources in Florida.

20 Q. Do you not think it's relevant what the effects

of consumption are on the streamflow of the Flint

22 River in Georgia?

23 A. It may be relevant for our purposes. It wasn't

24 relevant to my report.

Q. You know that the Flint River flows down into the THE REPORTING GROUP

TRIAL - November 30, 2016 (Vol. XVI) Florida v. Georgia 4177 1 Apalachicola River in Florida. Correct? 1 of in-stream habitat that is available for growth A. Of course. 2 2 and propagation of aquatic organisms. Correct? 3 **Q.** And you were looking at the impacts of 3 A. That's what they have said about this particular consumptive use on the Apalachicola River and 4 4 little stream, yes. 5 Bay. Correct? 5 Q. Okay. Now, sir, if you could, please turn to 6 A. That's correct. 6 tab 5. Tab 5 is a document marked FX-51. It's 7 Q. Okay. Now, sir, back to this article. They are 7 another article. The authors are Smith, 8 comparing minimum flows and habitat inundation 8 Golladay, Clayton, and Hicks. Do you see that? 9 between a historical drought in 1954 and a more 9 A. I do. 10 recent 2012 drought. Correct? 10 **Q.** And they are affiliated with the Jones Ecological 11 A. That is correct. 11 Research Center. Correct? 12 **Q.** And the authors found that the 1954 and the 2012 12 A. Yes. 13 droughts were similar in duration and intensity. 13 Q. And you recognize at least Hicks and Golladay, 14 Correct? 14 correct, because you have cited work by them in 15 A. For those individual years. 15 your expert report? A. I have. 16 16 **Q.** Okay. Now, if you could please turn to the next 17 page, page 3, and read the paragraph -- the first 17 Q. Okay. Now, do you see that this paper also was 18 18 paragraph under Shoal Inundation. presented at a Georgia water resources conference 19 A. I'm finished reading that. 19 in 2015? 20 20 A. I see that. **Q.** Okay. And, sir, do you see that there the 21 21 authors estimated that under the minimum **Q.** Okay. And if you could, sir, please just look at 22 streamflow of the 1954 drought, which was 117 22 the first two sentence of the abstract. 23 cfs, 82 percent of the shoal habitat remained 23 A. I have read that. inundated? Do you see that? **Q.** And, sir, do you see that the authors attribute 24 24 25 A. I see it. 25 the declines in mussel populations in the Flint THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4178 4180 **Q.** But during the drought of similar duration and 1 River Basin with droughts and increasing water 2 2 severity in 2012, the minimum flow was only 5 withdrawal for irrigation? 3 cfs; and only 43 percent of the shoal habitat was A. I see that's what they have said in this 3 inundated. Correct? 4 4 sentence, yes. A. I see that. Yes. 5 5 Q. Now, sir, I'm not going to belabor it by walking 6 **Q.** Now, sir, could you look at the right-hand column 6 through the rest of that article. Let's just 7 where it says Conclusions and Future Work, and 7 turn to tab 6. And here, now, instead of an 8 8 just read those three bullets to yourself, article, we have got a document that's marked 9 nlease 9 JX-21. It's the Flint River Basin Regional Water A. I have read their conclusions. 10 10 Development and Conservation Plan. Do you see 11 11 **Q.** And, sir, do you see that there the authors find that, sir? 12 that increased agricultural water demand is 12 A. I see it. 13 associated with increased frequency of extreme 13 **Q.** And do you see that underneath the picture it 14 low flows. Correct? 14 says Georgia Department of Natural Resources 15 A. That's correct. 15 **Environmental Protection Division?** 16 Q. And that there's been a more than 20-fold 16 Α. 17 reduction in the minimum flow compared to the 17 Q. And, sir, is this a document that you're familiar 18 minimum flow during the pre-irrigation era; 18 with? 19 correct? 19 A. I have seen this document. A. I think -- I see that's what they said. 20 20 Q. Okay. Now, sir, if you could, please turn to 21 Obviously I have not analyzed any of this myself. 21 page 21 of this document. Do you see it says 22 Summary of Technical Findings? 22 Q. Okay. A. But that's what they're saying. 23 A. I see that. I see it, yes. 23 24 **Q.** And they also found that the reduction in minimum 24 Q. Okay. Now, if you could turn the page to page 22 25 flow caused a substantial decrease in the amount 25 and just read the numbered paragraph 3 to THE REPORTING GROUP THE REPORTING GROUP

Mason & Lockhart

8

- 1 yourself.
- A. I have read it. 2
- Q. Okay. Now, sir, do you see that this document
- talks about the circumstances since the extensive 4
- 5 development of irrigation in the Lower Flint
- 6 River Basin?
- 7 A. I see that, yes.
- 8 **Q.** And do you see that the low flow criteria that
- 9 the U.S. Fish and Wildlife Service established to
- 10 protect aquatic habitats are not met more
- 11 frequently and for -- sorry. I'm saying that
- 12 backwards. That they are not met -- that they
- 13 are met less frequently and for shorter durations
- 14 than before irrigation?

15 I'm sorry for fumbling that. Do you want me

16 to repeat that?

17 A. I think I know what you're saying. And what I 18 think you're saying is that post-irrigation that

19 those are not met as frequently as they were 20

pre-irrigation.

21

22

23

24

25

7

But what I notice in this is that they're being referred to as criteria, and I don't believe they are criteria. I believe that these were -- I think these were a set of guidelines

that were developed, not criteria.

THE REPORTING GROUP Mason & Lockhart

- A. It's one of a number of things I looked at. I
- 2 would say that I made an effort to look at every
- 3 biological community that's present in the bay
- for which there is information.
- Q. Well, you're --
- A. And that's one of them.
- 7 Q. Your opinion, just to be clear, doesn't cover
 - oysters. Correct?
- 9 A. Part of my opinion does cover oysters. But I did
- 10 not devote the type of effort to evaluating the
- 11 oyster situation that was devoted to by another
- 12 expert on behalf of Georgia.
- 13 Q. Okay. So focusing on submerged aquatic
- 14 vegetation, or SAV, that's just a fancy term for
- 15 seagrass. Correct?
- 16 A. I think what we're referring to here is probably
- 17 the freshwater plants. So they would not be
 - called commonly seagrasses.
- 19 Q. Okay.

18

2

15

- 20 A. It would be the freshwater plants.
- 21 Q. My mistake. Seagrass is a saltwater SAV?
- 22 A. Seagrass is more referred to as a saltwater
- 23 plant.
- 24 Q. Okay. And as you said, we're more concerned here
- 25 with the freshwater SAV. Correct?

THE REPORTING GROUP

Mason & Lockhart

4182

- **Q.** You're familiar with those guidelines that the
- 2 U.S. Fish and Wildlife Service put out in 1999.
- 3 Correct?
- 4 A. I am.
- 5 **Q.** Okay. Now, do you see that Georgia EPD also
- 6 finds that this is the clearest evidence that
 - agricultural irrigation in Georgia compounds the
- 8 effect of climatic drought on streamflow in the
- 9 Flint River Basin?
- 10 A. I really can't speak on behalf of the agency.
- 11 **Q.** Well, do you see those words here, sir?
- 12 A. I see those words here.
- 13 **Q.** And you know this was written by the agency.
- 14 Correct?
- 15 A. I know it's -- going back, it is an agency
- 16 document. But I don't -- I haven't had any
- 17 conversation with the agency with respect to
- 18 their views on this.
- 19 Q. Okay. I would like to switch topics now and
- 20 focus on the bay as opposed to the river.
- 21 A. Okay.
- 22 **Q.** Now, you analyzed Georgia's consumptive use on
- 23 the Apalachicola Bay. And in particular, you
- 24 look at submerged aquatic vegetation, or SAV.
- 25 Correct?

THE REPORTING GROUP Mason & Lockhart

- 1 A. All the plants in the Apalachicola Bay are
 - important ecologically. These particular plants
 - 3 are present at the mouth of the Apalachicola
 - 4 River and in what's called East Bay, and they're
 - 5 valuable as habitat. And then they transition as
 - 6 it gets saltier into seagrass beds. So both
 - 7 seagrass beds and freshwater grass beds are
 - 8 important.
- 9 $\boldsymbol{\mathsf{Q}}.\;\;$ Okay. And this vegetation is important because
- 10 it's a source of food for many species in the
- 11 bay. Correct?
- 12 A. It's eaten by a lot of species, including the
- 13 manatees.
- 14 **Q.** Okay. And would you say in the East Bay nursery
 - area, it's essential habitat for the species that
- 16 are in the East Bay?
- 17 A. It's an important component of the habitat, yes.
- 18 Q. Okay. Now, one of the important submerged
- 19 aguatic vegetation species associated with East
- 20 Bay is Vallisneria americana. Correct?
- 21 A. It's one of several species of freshwater plants 22 that are present in this area.
- 23 Q. And -- okay. And can we just call it V
- 24 americana, so I don't keep screwing up the V?
 - Is that how people refer to it sometimes?

THE REPORTING GROUP

Mason & Lockhart

25

4184

TRIAL - November 30, 2016 (Vol. XVI) Florida v. Georgia 4187 1 A. Probably the best thing to call it is either --1 Wild Celery. Correct? water celery. That's kind of a common name that A. Yes. 2 2 3 would be very familiar. 3 **Q.** And if you turn to page 9-6, the last sentence on that page begins, the duration of exposure. Do 4 **Q.** Okay. Let's use that. Much easier for me. 5 Now, this water celery -- let me just --5 you see that? 6 before I agree to that, I just want to make sure 6 A. I do. 7 it's -- are water celery and Vallisneria 7 Q. And if you could just read that to the end of 8 americana completely coextensive; one doesn't 8 that paragraph that continues on 9-7. 9 include something more than the other? 9 A. I finished reading that. 10 A. No. 10 Q. Okay. Now, in this paper -- is it Mr. Moore or 11 Q. Okay. 11 Dr. Moore; do you know? 12 A. That covers it pretty well. 12 A. I don't know. 13 **Q.** Okay. Now, this water celery serves as a food 13 Q. Okay. Hopefully, we don't insult him if I say 14 source for birds and other mammals; and it 14 Mr. Moore. 15 provides habitat. Correct? 15 He writes that the duration of exposure to A. Birds don't eat it too much, but mammals like 16 16 high salinity is very important in determining 17 manatees would eat it; and lots of little animals 17 plant survival and possible recovery. Correct? in the -- like, fish -- some fish will eat it, 18 A. That's what he says, yes. 18 19 ves. 19 **Q.** And then he goes on in that paragraph to say that 20 Q. Okay. And this water celery is more sensitive to 20 with salinity increased to 15 ppt for just one or 21 salinity. Correct? 21 two days, growth of V americana, which is wild 22 A. Yes. 22 celery, is reduced. 23 **Q.** Okay. And it doesn't grow particularly well in 23 A. That's right. And it's important to understand 24 high salinity environments. Correct? 24 that he's doing a set of experiments. 25 A. That's correct. The saltier the water gets, you 25 **Q.** Okay. And he says on that same page that THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4186 4188 1 transition from freshwater plants to marine 1 exposure to salinity of 25 ppt for just one day 2 2 plants. So you will find -- in Apalachicola Bay can kill the plants? 3 Α. you won't find any of these plants in the outer 3 4 bay; they will all be the seagrasses. But as you Q. But your analysis used only a weekly time scale. 4 5 go into East Bay, as you get closer to the river, 5 Right? 6 the seagrasses disappear; and the freshwater 6 A. That's correct. 7 7 **Q.** So in a week that is close to the parameters plants appear. 8 **Q.** Okay. And in your evaluation of how changes in 8 identified by Mr. Moore, the weekly average 9 streamflow affect salinity in the bay, you were 9 salinity value could obscure -- it could be 10 10 looking at average salinity values on a weekly obscured if salinity exceeded 15 or 25 ppt for a 11 11 basis. Correct? day or two. Correct? 12 A. I was looking at that along with the variation 12 A. I think what you're asking me is if one of my --13 among weekly values. So I looked at the 13 let's say a weekly average value of 10 parts per 14 variability in salinity as computed by weekly 14 thousand might have had a value of 15 in it that 15 15 was part of the average. And it could. averages. 16 Q. Okay. Now, you cite in your direct testimony a 16 Q. Okay. Now, let's talk about what you did with 17 paper by Ken Moore. Correct? 17 these average salinity values in your SAV 18 A. I do. 18 analysis. You calculated salinities for three of 19 **Q.** And if we could just turn to that, it's tab 7 in 19 the ANERR monitoring station in Apalachicola Bay. 20 your binder. 20 Correct? 21 A. That's correct. Tab 7 is JX-32, and this is the paper by Ken 21 22 Moore that you referenced. Correct? 22 Q. And that included East Bay. Correct? A. That's right. 23 A. It included what's called the East Bay station, 23

Mason & Lockhart

Q. And if you could please turn to page 9-5. And do

THE REPORTING GROUP

you see there is a section on Salinity Effects on

24

25

which is not a location that I consider

THE REPORTING GROUP

Mason & Lockhart

representative of East Bay; but it's the only

24

25

4189 4191 1 station internal to East Bay. 1 Apalachicola Bay has been steadily increasing 2 2 Q. Okay. And your direct testimony presents your since Hurricane Dennis. Correct? 3 salinity analysis for only one of those stations, 3 A. I don't think that's the basis for that opinion. I base that opinion on two things. One is the and that's Cat Point. Correct? 5 A. Oh, in the direct? You mean the most recent? 5 monitoring that's been going on by the research 6 **Q.** Correct. In your prefiled direct testimony --6 station since Hurricane Dennis as well as my A. Correct. 7 observations in East Bay. But I don't believe 8 **Q.** -- you only present the salinity data for Cat 8 that what you just referred to would be -- would 9 Point? 9 be the basis for a steady increase. 10 A. That's correct. 10 Q. Sir, if you could, please, turn to page 69 of 11 **Q.** And Cat Point is further from the mouth of the 11 your prefiled direct testimony. It's on page 31. 12 12 Apalachicola River than East Bay. Correct? Do you see there that you referenced GX-1254, 13 A. That's right. 13 which is the document that you're looking at? 14 **Q.** And has a higher salinity than East Bay? 14 A. I'm on page 69. Correct? 15 A. It's definitely higher than the East Bay regions 15 Q. Paragraph 69. 16 16 where the plants occur. And it is, I think, also A. Oh, paragraph 69. Thank you. 17 17 higher than what's recorded at the East Bay I'll get used to the fact that it's over here 18 station. 18 on my right, but -- let's see. Okay. I'm at 69. 19 **Q.** And wild celery, which does not like the higher 19 Q. You're at paragraph 69. And do you see there, 20 20 salinity conditions, typically does not grow sir, that you cite GX-1254, which is the document 21 around Cat Point. Correct? 21 we're looking at, and other reports that 22 22 A. That's the part of Apalachicola Bay around the similarly suggest that SAV in Apalachicola Bay 23 edges where you would find the seagrass beds like 23 has recovered following Hurricane Dennis? A. Let me -- let me reread 69. 24 eelgrass and plants like that. 24 25 25 Q. Right. Right. So that includes what we were THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4190 4192 1 A. So they do very well. 1 referring to earlier as the Franklin County 2 2 **Q.** You find more of the saltwater plants as opposed coastal waters for the entire system. And then 3 3 to the freshwater plants? that's followed by some sentences from other 4 reports from Florida that were -- that was what I 4 A. Right. Lots of saltwater plants out there. 5 5 Q. Right. Now, you rely in your testimony on a was referring to. 6 Florida Fish and Wildlife Conservation Commission 6 Q. Okay. Now, sir, let's look at GX-1254, which is 7 report on seagrass in Franklin County coastal 7 in tab 8 of your binder. 8 A. I have it. 8 water. Correct? 9 A. I include that in my testimony, yes. 9 Q. So, sir, can you turn to page 4. Do you see 10 10 **Q.** And you note that that document shows a net table 1? 11 increase of 159 acres of submerged aquatic 11 Α. Yes. 12 vegetation between 1992 and 2010 in the regions 12 Q. Sir, do you see the line that says Apalachicola 13 13 Bay? of Apalachicola Bay. Correct? A. To put that in some context, there were two 14 14 A. I do. 15 surveys that were done that mapped out grass 15 **Q.** Do you see the column on the far right that says 16 beds, either freshwater or saltwater grass beds 16 change 1992 to 2010? 17 throughout the entire region. And then 17 A. Yes. 18 calculations were made of area and subtractions 18 Q. And, sir, do you see that instead of showing an 19 19 and -- were determined in terms of areas of loss, increase in SAV in Apalachicola Bay, it actually 20 20 areas of gain. And over the entire region there shows a decrease of 2,000 acres of SAV during 21 21 was a net gain of 100. But there was -- in that time periods? 22 22 certain regions like East Bay there was a Right. And I addressed this in my expert report 23 23 as to the kinds of reliance you should place on reduction that occurred. 24 **Q.** Okay. And we'll look at that in a moment. But 24 this table. 25 you created this report to say that SAV in the 25 Q. Okay. I will let you address that; but you see THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

4195 1 that that is what is shown right here, a decrease Q. Okay. Thank you, sir. 2 2 of 2,000 acres of SAV in Apalachicola Bay. SPECIAL MASTER LANCASTER: Redirect? 3 Correct? 3 REDIRECT EXAMINATION A. I don't believe that's what the agency thinks it BY MS. DeSANTIS: 5 represents. 5 Q. Dr. Menzie, to assist the Court and to put 6 Q. Okay. But that's what is here in this table. 6 yourself and your area of expertise in context, 7 Correct? 7 what is your precise area of expertise? 8 A. That's -- that's the number. 8 A. I specialize in an area known as causal analysis. 9 And to explain that somewhat, that's the 9 It's kind of like an individual that provides 10 number of mapped acres from aerial photographs 10 diagnoses of what's ailing an individual or 11 between these two points in time. 11 patient. But I basically do that with respect to 12 **Q.** Sir, you don't have any evidence to contradict 12 environmental matters, causal analysis, what 13 that statement as it relates to the wild celery, 13 causes something to happen. And my broader area 14 the freshwater SAV, for Apalachicola Bay. 14 of expertise is in marine ecology, riverine 15 Correct? 15 ecology. 16 A. What I'm -- what I was pointing out is that my --16 **Q.** And so are you an ecologist? 17 my report is much more detailed than this. And 17 That's by training and by my career, which began 18 18 it points out the significance of the fact that in the early 1970's. 19 wild celery and other plants were growing and 19 Q. Have you previously done work on estuaries and 20 20 increasing in the bay since 1992. They were much estuarine systems like the Apalachicola Bay? 21 21 more abundant in 2005 than in 1992. And it was A. I have worked on estuaries in the Gulf of Mexico, 22 22 the hurricane that occurred that year that but my early years I began in the Northeast. And 23 23 decimated them. So that's a really important I have experience working on estuaries ranging 24 24 point. from the Penobscot, through the Gulf of Maine, 25 25 through the Hudson River, through the Delaware And then since that time, the research agency THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4194 4196 1 has gone out and documented the return of the 1 River, all the way around the coast to San 2 plants. And then I went out to see whether they 2 Francisco Bay, San Diego Bay, Puget Sound. 3 3 **Q.** And what is the scope of the work that you were had returned, and they had. 4 4 So I think that the agency that developed asked to do in this matter by the State of 5 5 this table recognizes the limitations of being Georgia? 6 6 able to judge what was present. And it was A. It was pretty narrow. I was specifically asked 7 7 largely affected by the turbidity of the water; to look at the claims that were being made of 8 8 what can you see from the sky? harm to the Apalachicola Bay, to the Apalachicola 9 9 River, and the floodplain, and to make a So they point that out. 10 10 determination as to the relative influence of **Q.** Sir, do you have an analysis of how much of the 11 11 wild celery has returned in Apalachicola Bay of Georgia's consumption of water on any changes 12 12 freshwater SAV? that may be occurring within those systems. 13 13 Q. Now, counsel for the State of Florida has A. I can speak to my observations. 14 **Q.** Sir, other than your observations, do you have an 14 questioned you about the years that you analyzed. 15 analysis that would contradict the numbers that 15 Why did you focus your analysis on the years 1992 16 we see here? 16 forward? 17 A. I don't think these numbers have anything to do 17 Α. Well, my understanding at the very beginning of 18 directly with wild celery because they can't tell 18 my involvement in this case was that there was a 19 that from the sky. 19 claim -- a prayer for relief, if you will, on the 20 Q. Okay. Sir, you don't have an analysis of how 20 part of Florida to have waters -- water 21 21 much wild celery or freshwater SAV is in consumption returned to the levels of 1992 22 22 Apalachicola Bay. Correct? because there had been harms that had been 23 23 A. Other than my observations? experienced since that time as indicated by the 24 24 Correct. loss of oysters and other effects. 25 25 Q. Did you in the course of your work, Dr. Menzie, A. Right. I have my observations. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

TRIAL - November 30, 2016 (Vol. XVI) 1 though also consider data and information from 1 2 2 years prior to 1992 to inform your opinions? 3 A. I did. 3 4 Q. And, Dr. Menzie, in the course of your analysis, did you work alone; or did you work with others? 5 6 A. I worked with a team. Typically for these causal 6 7 analyses approaches that involve bringing 7 8 8 together a variety of types of information such 9 as hydrology and whatnot, it's helpful to bring a 9 10 team together to look at various aspects and then 10 11 kind of combine that into a whole, a whole 11 12 analysis. 12 13 Q. All right. I would like to ask you and ask the 13 14 Court to please look at your written direct 14 15 testimony on page 8. And I know we handed your 15 16 written direct testimony to the Court; and I know 16 17 it is also in the very front of Florida's binder, 17 18 18 although it's not behind a tab number. And there 19 is a chart. And we'll put this up on the screen, 19 20 20 as well in your direct testimony on page 8. 21 21 What does this chart show, Dr. Menzie? 22 22 A. These are the primary members of my team. It 23 23 shows their names and their degrees. And then Α. 24 24 the areas that I felt were important for 25 25 answering the questions I was asked to answer are THE REPORTING GROUP Mason & Lockhart

and to share some of my thoughts. And I talked to and read the reports of Georgia's experts on modeling. And we -- you heard earlier from Dr. McAnally, as an example. I reviewed Dr. Bedient's reports. I had conversations with their staff so that I was clear about what they

And then I also looked at all the work that was done by Florida's experts. So I wanted to make sure that I had a clear understanding of where the differences lied and to help me feel more confident about my results.

So I began with Dr. Flewelling who assessed consumption of water, to Dr. Hornberger who translated that into flows, to Dr. Lettenmaier and then all of the biological consultants that Florida has employed, in particular Dr. Allan who looked at floodplains, and Dr. Glibert who looked at the base of the food web, and Dr. Jenkins who looked at the fish.

- Q. Did you also review and analyze literature as part of your work on this case?
- I did. It was important to get as -- as broad an understanding of what individual researchers in Georgia and Florida had been discovering over the

listed across the top. So the methodology I have just mentioned is something called causal analyses. But the technical fields that need to be called upon to answer the questions include marine ecology, freshwater ecology, statistics modeling, and GIS -- geographic information systems -- and whatnot.

So while I'm familiar with all of these areas and have deep expertise in some, I felt it wise to bring together a team that could share knowledge so that we could collaborate in putting together our assessments of what was claimed and also the extent to which Georgia was contributing to any changes in the bay or in the floodplain.

- Q. Separate and apart from this team that you assembled, did you look at the work of other experts for the State of Florida and the State of Georgia in order to develop your opinions and analyses in this case?
- A. I did. One of the things I wanted to be able to do is have as complete an understanding of the technical issues in this case as I could. So on the biology side with respect to Georgia's experts, I spoke with the expert on oysters to understand what that individual was looking at

THE REPORTING GROUP Mason & Lockhart

many years. And so I made a careful examination of those literature to broaden my understanding.

Q. Now, doctor, you have talked about the causal analysis that you did for this matter. And you have spoken of your expertise in causal analysis. I would like to turn to page 22 of your written direct testimony and particularly to look at demonstrative 6 on that page to assist in an understanding of what a causal analysis is. Can you please describe what you are showing in demonstrative 6 in your written direct testimony.

A. 12 Yes. So, you know, recognizing that this is a very complex problem and that ecosystems are complex, it's important to approach this in a -you know, in a step-wise manner so that you can -- you can bite off pieces and look at them and then move on to the next.

> So I use a three-step process. And the first, really, is to look at all of the available information to see whether there is evidence of change.

This case really is about change in the bay and change in the floodplain. And so the first step before going any further was to see whether that premise that changes were occurring was

THE REPORTING GROUP

supported or not.

Then move to tier 2, which in this case is asking the question of whether or not Georgia's consumption of water was sufficient and of a nature that could bring about these types of changes or contribute to them in some way.

And so, for example, that would involve the modeling work that I referred to upon cross that looked at the relative influence of Georgia's consumption of water on the floodplains or on changing the salinity in the bay. And then finally, depending on the answer from that step, or to confirm what I found in that step, I consider all the possible causes that may be at play.

And there are -- for example, in the case of the river, I was aware, as everybody is aware, I think, that the dam was built; the bottom of the river is decreased. There's been sedimentation that may be blocking some of the sloughs. There's been road construction. There's a variety of things that have happened.

And before pointing a finger at one cause and saying, aha, I found the answer, it's important to kind of look across everything to make sure

THE REPORTING GROUP

Mason & Lockhart

biologically impaired, that is, the fish were off; they didn't have the right types of benthic invertebrates, or whatever it might be, states came to recognize that they needed some way to figure out what was going on.

So interestingly enough, Maine served as the first step and --

- **Q.** The State of Maine?
 - A. The State of Maine. And around the corner we have the Presumpscot River, and that became one of the first case studies for applying causal analyses. They had -- they had been gathering data throughout the '90's. There were a number of issues. And the State of Maine got together with the Environmental Protection Agency and began thinking about how to organize information and how to think about it. And that actually became the first case study.
 - **Q.** Did your approach for assessing the ecology in the ACF Basin differ from the approach of experts for the State of Florida?
- A. I think it differed in an important material way.
 I had the impression, anyway, when I read the
 expert reports that -- of Florida, that they
 started by presuming that the harm did -- any

THE REPORTING GROUP

Mason & Lockhart

that that's a correct answer or to perhaps identify the things that may be most at play.

So that's the nature of the analysis.

- 4 Q. And why specifically did you choose to do a5 causal analysis in this matter?
 - A. Well, it has become the state of practice to do causal analyses. And it -- the logic behind it is that it really helps avoid jumping to conclusions. By considering all the possibilities and by taking a step-wise approach, an analyst such as myself is forced to think about what's going on in the system and to consider everything, and after that careful consideration, to be able to identify the things that are most important.

So it's a deliberative process that's been developed for that purpose, very much like in the medical community.

- 19 Q. When did a causal analysis approach become20 recognized as best practice in your field?
- A. While this had been well recognized in the
 medical community for some time, in the 1990's,
 because of the clean air -- Clean Water Act and
 the observation that there were many rivers and
 streams throughout the United States that were

THE REPORTING GROUP

Mason & Lockhart

harm that was seen must be related to Georgia's consumption of water. And so beginning with that conclusion, at least as it struck me, information was marshalled to prove up that, to kind of help explain how it could be that Georgia's consumption of water was the cause of whatever change that may be occurring or may be seen within either the bay or the river.

So that is exactly what the causal analysis method was designed to avoid, jumping to a conclusion like that on figuring out what a cure was when you don't know what the nature of the disease is. And so I had begun with the causal analysis before I saw any of Florida's expert reports. But the most striking difference was that.

- 17 Q. And, Doctor, does the approach of Florida's
 18 experts to assessments of the ecology in the
 19 basin, does that approach render your conclusions
 20 unreliable?
- A. I think it must be recognized that the approach
 that was taken was the one -- was as I just
 described. And I know of many instances where
 you can reach a false conclusion if you don't
 carefully think about the problem and if you

THE REPORTING GROUP

TRIAL - November 30, 2016 (Vol. XVI) 1 don't look at what the alternative explanations 1 2 2 might be. So for that reason I would consider it 3 unreliable. 3 4 4 Q. And, Doctor, we're going to go into some of your specific conclusions from your causal analysis; 5 6 but can you please briefly summarize for the 6 7 Court your conclusions resulting from your causal 7 8 8 analysis here. 9 A. Well, in brief -- and I mentioned this three-step 9 10 process I took. I really didn't see anything 10 11 happening in the bay that would be considered or 11 12 be a material change biologically. I did see in 12 13 my first step changes in the -- in the 13 14 floodplain. When I looked more deeply at the 14 15 relative contribution of Georgia's consumption of 15 16 water to changes, I concluded that while not 16 rings. 17 17 zero, the influence of Georgia's consumption of 18 water is minor, very small. And then beyond 18 19 that, for certain aspects of my analysis, I 19 20 20 pointed out where some other factors were playing 21 21 an important role in influencing the changes in 22 22 the bay or in the river and floodplain. 23 Q. All right. Now, doctor, moving away from the 23 24 specifics of your causal analysis and the 24 25 25 framework for your causal analysis, I want to THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4206 1 move on to talk about your analysis of the 1 2 historical hydrological regime. And can you 2 Q. And what did you find? 3 3 please describe for us what is a historical 4 hydrological regime and why was it important to 4

river, and that shows the flows going up and down at different periods. And we're able to take that back to, you know, the 1920's.

And then we have, as a second source of information, information that's collected and maintained by the U.S. Government, National Oceanic and Atmospheric Administration -- NOAA -on droughts. So we can look at that information and know what kind of drought occurred here in the Northeast, what kind of drought has occurred in the South. And that information can be looked at going back in time as well.

But those sources of information take us back only so far. So the third type of information I looked at were tree rings or studies about tree

There's a lot of published literature on tree rings. And any kid that has looked at a stump has been able to count the age of a tree. But the tree rings also carry information on the past hydrological regime. And by putting sets of trees together, the scientists in this field can go back hundreds of years, thousands of years. And so I looked at that information to discover what the long-term historical hydrological regime

THE REPORTING GROUP

5 your analysis and, as a backdrop, your causal 6 analysis for this matter? 7 A. Sure. Well, we -- I think we all know that this 8

9

10

11

12

13

14

15

16

17

18

19

21

past year has been a year of drought. So Maine has had a moderate drought. And Georgia, unfortunately, has got an extreme drought. And we have fires spreading across the Appalachians. So we have been in a period of drought for some time.

And in thinking about this ecosystem, it's important to understand whether this is an especially unusual event. These are bad droughts, But also -- so, therefore, to look back in time to see what the history of the system is -- and that's known as the historical hydrological regime -- to gain an understanding of what formed the ecosystem.

22 **Q.** And in evaluation of the historical hydrological 23 regime of the ACF Basin, what did you conclude?

24 A. Well, I looked at three things. You know, we 25 have the gage data that are available for the

> THE REPORTING GROUP Mason & Lockhart

was in the -- in this basin.

A. I found something that has been well known to people that have been working in this field --5 particular field, and that is that the system periodically flips from wet to dry. And it does 6 7 that at a cycle of every 20 to 60 years or so.

> This is -- this has a meteorological understanding to it. And that's -- that's reflected in the people that study the tree rings. Tree rings are very tightly packed when it's dry; and they spread apart when it's wet, and they pack up. And it's possible to see that. So that helped me understand that the Apalachicola River system -- ecosystem was one, as we look at it today, that has come -- has persisted, has moved through this period of time of dryness and wetness.

We're currently in a dry period.

20 Q. And, Dr. Menzie, separate and apart from the 21 historical hydrological regime, did you look at 22 other factors that have historically influenced

23 the ACF Basin and its ecology?

24 Α. Yes, I did.

25 Q. And I would like to turn in your written direct

I think I may be on 11 analysis and that we need to try to separate 12 a mike. Does that sound clear? 12 13 BY MS. DeSANTIS: 13 Q. Thank you, Dr. Menzie. And based on your 14 Q. Dr. Menzie, as you go to the screen, I would like 14 analysis of various factors, including those 15 to just ask you to please describe what this 15 shown on the demonstrative on the screen, what 16 16 figure shows. have you concluded historically the impact has 17 THE WITNESS: I'll point at this, but 17 been of these various factors on the Apalachicola 18 the Court might also find it helpful to look 18 Bay and floodplain? 19 at the document. 19 Α. Some have short-term influences that are -- seem 20 20 catastrophic. So, for example, the hurricanes, A. In thinking about what's influenced the bay and 21 21 the floodplain over the last many decades, I big impact; and then you will have a recovery 22 22 from that. started by just laying out over time the things 23 that people did. And we already recognize that 23 Some have had longer-term influences, such as 24 24 the construction of the dam. It's hard to take we're talking about consumption of water by 25 Georgia, so that's a given. You know, that's a 25 the dam away once the dam is there. And that's THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4210 4212 1 given from around the 1970's onward. But I 1 changed the bottom of the river. And so 2 wanted to know what the various other things were 2 that's -- that's a condition that exists as a 3 that were going on in the system. 3 result of that. 4 So we had the dams constructed in the '50's. 4 The dredging activities, I think as we have 5 5 We had various dredging activities that have gone heard, the dredge materials were placed on the 6 from the '50's into the 1990's. We have changes 6 banks; and to varying degrees they continue to 7 7 in the river that we have heard about as a result block the sloughs. 8 of the dam and dredging, straightening the river, 8 And those are some of the major things that 9 9 things like that. And that's what -- so I get are affecting it. 10 10 these in my mind in terms of when did they occur. **Q.** Has the system recovered from historical periodic 11 11 And then, of course, we had logging that was episodes of stress? 12 12 focused on the cypress trees. Α. Well, if we look -- if we think back over the 13 13 And then the second panel then lays out hundreds of years, the system has gone through 14 things that are natural in occurrence. So there 14 periodic droughts and wet periods; so what we're 15 15 looking at today is a system that's resilient in are really two big things that happened. One are 16 the periodic occurrences of hurricanes, so these 16 terms of passing through those kinds of 17 17 conditions. And as I just mentioned, there are in these blue bars and red bars. And you 18 will hear about two major hurricanes, one in 18 probably always have been large hurricanes that 19 the '80's and one in 2005 -- this is Hurricane 19 have occurred periodically; and it does recover 20 Dennis -- that literally destroyed large portions 20 from those. 21 of the natural resources in the bay. 21 **Q.** Is the Apalachicola unique in its resilience 22 And then the next set of natural events are 22 among other estuaries? 23 23 the occurrence of droughts. And they're shown A. I think one of the unique features of estuaries 24 24 perhaps is that they have to be resilient. 25 So -- and then in this bottom panel are 25 They're in this in-between place between land and THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

freshwater and the ocean and saltwater. So they are forever being pushed upon by forces of nature that are conflicting with one another in their type.

So if you look around and think about just for a moment the -- some of the major estuaries in the world. Even starting up here if we were thinking about the Penobscot, for example, that would be a system that is resilient or has, you know, developed with periodic influences of large amounts of fresh water, ice melt, snow melt, all that sort of thing, temperature changes, extreme temperatures.

If we go to some other part of the world, if we go to the Amazon, we don't see those extreme temperatures; but we get tremendous changes in flow, very wet seasons, very dry seasons. So if you wanted to fish in the Amazon, you would go there in the dry season because it concentrates the fish; and you have a better chance of catching them.

If you look at the Apalachicola, it's somewhere in between that. But, again, it does experience the Gulf of Mexico on one side and the river on the other and this mixing of the two.

> THE REPORTING GROUP Mason & Lockhart

important things that I had read in the expert reports developed by Florida's experts, Dr. Glibert and Dr. Jenkins, was that -- the impression was that these plants that we were talking about were absent from the East Bay, which is an important nursery area.

So that's an easy thing to check. And I thought -- and I have done a lot of work in that in many different estuaries. So I knew that if I just went down there, got a boat with a person that was knowledgeable, and went over to where the plants were supposed to be and see if they were there. They were either there or they weren't. And they were there. And so I kind of got a sense of how extensive they were.

There was another feature of the system that was really interesting, which was that parts of the system are fed by rivers that are known to carry black water. This is water that is deeply stained by draining through forest systems and stuff. It's tannins and things like that. And I had read that this had a strong influence on conditions at this one station, the East Bay monitoring station. So I went to see whether those conditions existed, at least during the

> THE REPORTING GROUP Mason & Lockhart

4214

And so estuaries need to be resilient in order to basically maintain themselves estuaries.

- 3 **Q.** Dr. Menzie, you mentioned in your testimony under examination by Florida that you had visited the 4 5 Apalachicola Bay recently. Is that right?
- 6 A. That's right.

- 7 Q. And I don't want to spend a lot of time on this 8 particular visit, but when did you visit the 9 estuary?
- 10 A. I went in April of this year.
- 11 **Q.** And what was the purpose of that visit?
- 12 A. I try to visit every system that I might be asked 13 to look at. So that was important. But there were particular pieces of information that I 14 15 wanted to confirm for myself. I had read about 16 them and I wanted to see if they were true, and 17 basically to ground-truth my analysis, to feel 18 much more comfortable to be able to talk about 19 the system than if it were just an abstract.
- 20 **Q.** And in the course of that visit, what did you do 21 and what did you find, if you could just 22 summarize it for us briefly?
- 23 A. There was a lot that I saw, but I distilled it 24 down to a couple things that I think are worth 25 sharing. One -- for me, one of the most

THE REPORTING GROUP Mason & Lockhart

1 time of my visit. And they did. You could take 2 a sample of water; it looks like a cup of coffee.

> And then, finally, I wanted to visit the heart of the tupelo honey area. So there is a little family, the Lanier family, they make honey and put out bees and stuff where they come off the tupelos. So I visited their place. And as I was driving around through there, I noticed that because of the road construction up along the side of the river, that the roads were blocking the flow of water from the river to the floodplain. That doesn't exist everywhere, but it does exist along stretches. And so for that reason I wound up analyzing roads in a little bit more detail.

- 16 **Q.** All right, doctor. I want to turn now to your 17 causal analysis and conclusions regarding the 18 ecology of the river and the floodplain. And you 19 were asked a number of questions about this 20 floodplain by counsel for the State of Florida. 21 Can you please describe for us briefly the causal 22 analysis that you performed regarding the river 23 and the floodplain.
- Sure. So the first step was to see if there were 24 25 changes. That's step No. 1. And so I reviewed

THE REPORTING GROUP

Mason & Lockhart

4216

11

12

13

14

15

16

the literature and I, like others whom you have heard from, saw that the literature was pretty sound on the fact that the floodplain forest has changed from a wetter type system to a drier type system. And so, indeed, there had been a change.

24

25

So then the second step was to try to get an understanding of what was causing that change and, more particularly, what might be the relative contribution of Georgia's consumption, at least to river flows, because that's what Georgia would affect.

And so I did a series of analyses where I was comparing the amount of areas that were flooded without that incremental consumption by Georgia, to flooding with that incremental consumption, and looked at that difference to see how big a footprint that was on the various habitats in the river.

And then, finally, I took a look at some of the other major factors that may be influencing the flooding to get a handle on how important they were.

23 Q. And as a result of your analysis, what did you 24 find were the primary factors affecting 25

floodplain inundation? THE REPORTING GROUP

Mason & Lockhart

1 the river. And then the third was the

2 consumption of water.

3 Q. And, again, the percentage that you're assigning 4 to Georgia's consumptive use in terms of a factor

5 that influenced floodplain inundation is what?

6 A. For the region that is the swamp region where the 7 tupelo trees and the cypress grow, it's about 2 8 percent or less.

9 Q. And today, are the river and the floodplain still 10 affected by these factors?

Α. Yes. These factors will remain important. Climate itself, you know, from year to year is going to change. The bottom of the river will largely be what it is. It may change slowly. So I -- I would expect that what we're looking at is what we're going to see into the future.

17 **Q.** Will there be any opportunity for the river or 18 the floodplain to recover?

19 I think the river and the floodplain have

20 essentially recovered within the constraints that 21 exist as a result of construction of the dam and

22 the management of flows and stuff. So the system

23 has recovered in that degree. It's a resilient 24 system. The bay, as I mentioned or will talk

25 about in a moment, is a system that really hasn't

> THE REPORTING GROUP Mason & Lockhart

4218

1 been influenced to any great degree. 2 Q. While we'll still on the floodplain, doctor, I

3 want to look at a document that was shown to you 4 by counsel for the State of Florida, JX-168, 5 which is behind tab 3 in the binder that was

given to you by Florida's counsel. And this is 6 7 the 2016 biological opinion.

8 And I am going to ask you to turn to a few 9 sequential pages and paragraphs in the biological 10 opinion. Beginning with page 3 of the BiOp, and 11 I would like to ask you to look at the last 12 sentence of the first paragraph and to read that 13

14 A. Okay. I have read that.

to yourself.

15 Q. And, doctor, I would like to ask you what does 16 this particular sentence tell you in terms of

17 population of Gulf sturgeon?

18 Α. Well, in this case the Fish and Wildlife Service 19 is considering whether the operations of the

20 reservoirs, given everything that's going on, 21 including Georgia's consumption of water, would

22 jeopardize the ongoing populations or the

23 recovery of the populations of Gulf sturgeon. 24 And they conclude that it would not, and that it

25 would not -- these -- neither would it affect the

THE REPORTING GROUP

Mason & Lockhart

A. The biggest one turns out to be climatic differences between years. Not climate change per se, but this variation that occurs between wet years and years in which you have droughts. If you go from a -- sort of an average year to a year in which you have a drought, that difference can account for 68 percent or 60 percent change in the amount of flooding of the floodplain. Just that one factor.

The second most important factor was the change in the river -- physical features of the river, which were deeper through the upper portions of the river. And in looking -- and now holding climate the same, looking at what the depth of the river was before the construction of the dam and what it is in the most recent measurements, that accounts for about a 20 percent change in the flooding. So the -- not as much water gets into the floodplain because it's now -- remains within the river. And then looking at the incremental influence of the consumption of water, that came out to be a couple of percent.

So the biggest one was the climate. The second biggest was this change in the bottom of

I think the most notable thing to mention is that Dr. Allan really looked for differences in the amount of flooding or amount of presence of water under certain flows. He was comparing difference scenarios that he had been provided. But my feeling when I looked at that was there's a little bit of apples and oranges among those scenarios. They're not quite equivalent. Nevertheless, the work largely involves looking at the potential of things to occur such as the potential number of days that things might be drier versus wetter. So none of the work really involves looking at populations of any of

Mason & Lockhart

4227 1 that's an important aspect of thinking about 1 web are the plants. And then in the middle 2 2 these species and these ecosystems. region of the food web are animals that eat 3 As for example, in the biological opinion we 3 plants, whether they're large plants or very tiny 4 just read or looked at, that's what the Service 4 plants. And then in the upper level of the food 5 thinks is important to look at is populations. 5 web you would have fish and some other types of 6 MS. 14 A. The only way to really judge that is to think 15 about the -- whether these plants, whether they 16 be the submerged plants, these big plants, or 17 these little plants, continue to serve as food 18 for the upper food level -- the levels of the 19 food web -- and they do -- and then to check to 20 see whether the animals that would be dependent 21 on this food web sustain themselves.

> Like, there's a fish called the sand trout or the flounder or the various species that live here. Are they continuing to be in similar population abundance over time?

> > THE REPORTING GROUP Mason & Lockhart

important source of food. They're a little bit bigger than these plants here, and they can be eaten directly by these copepods.

These are little shrimp, little tiny shrimp-like animals. And these in turn are eaten by this fish, the bay anchovy. This fish, the bay anchovy, is probably one of the most important fish in the bay. It swims through the water with its mouth open and just basically takes in all these little tiny copepods and eats those. And then the bay anchovy is the source of food for all these other fish like the Menhaden that are well known all around the country. They're sources of food for all kinds of other fish and birds and mammals. So this fish can be supported by eating these little tiny shrimp-like animals in between that eat these diatoms.

The other way that they can be supported is that during the summer months, there is an increasing amount of these little tiny plankton, little tiny green spheres. And these are eaten by little animals known as ciliates, little tiny animals that you can see in a microscope. They're very tiny. And they in turn are eaten by these copepods, these shrimp, which in turn are

> THE REPORTING GROUP Mason & Lockhart

4230

And that is direct evidence as to whether or not the food web is sustained.

Q. All right. Doctor, I would like to ask you, please, to turn to page 50 of your written direct testimony, and particularly to demonstrative 20 that is shown on page 50. And we'll also put that up on the screen.

> MS. DeSANTIS: And, your Honor, may I ask again if Dr. Menzie may go to the screen to help explain this demonstrative?

11 SPECIAL MASTER LANCASTER: Sure.

12 BY MS. DeSANTIS:

- 13 **Q.** Doctor, can you please describe what that 14 demonstrative shows.
 - A. Sure. So this is a very simple picture of these little tiny plants that are at the base of the food web, the animals that are in the middle of the food web, and then an example of the fish at the top of the food web. And you will find this present in estuaries pretty much around the country.

But just a little bit of biology, on the left here are these interesting shapes. These are diatoms. And they're very important all around the coastline. And they -- and they're an

> THE REPORTING GROUP Mason & Lockhart

eaten by the bay anchovy. So there's two ways in which the bay anchovy continue to be supported in Apalachicola Bay.

> My check on this was to see over all kinds of conditions since the 1970's, through droughts, through wet periods, whether the bay anchovy continues to be abundant -- it's almost like a barometer -- and it does. So that tells me that one way or the other the grazers exist, and the bay anchovy continues to be supported, sometimes by diatoms coming up this way, as in the spring, or sometimes by a combination of diatoms and little tiny plankton, as in the summer.

So it's just an interesting biology piece.

- Q. Dr. Menzie, I'm actually going to ask you to stay at the screen because we are going to put up another demonstrative as we move on to the upper levels of the food web from page 65 of your written direct, demonstrative 27. And as we move on to talk about the upper food web and about the fish, including the anchovy that you just testified about, can you explain to us, please, what is shown in demonstrative 27.
- 24 Sure. It turns out that the most extensive data 25 on biological and ecological organisms in the

THE REPORTING GROUP Mason & Lockhart

4232

1233

bay, aside from oysters, which, you know, you will hear about, is fish. And fish have been studied in the bay since the early 1970's.

What you're looking at here are all the locations where either the State of Florida, the Research Laboratory, or the national government has been studying fish.

This is the Apalachicola River, so fish have been studied all through here. This region -- this region right in here is the nursery area known as East Bay. That's a central part. Then out here in Apalachicola Bay are all the rest of these stations.

Why I felt it was important to share this picture is that there's an extensive amount of information available on fish, and fish tell us a lot about how the food web is structured. The fish can only be there if the food is there. So looking at the fish that are there, they're abundant. And how that abundance changes from year to year or decade to decade gives me direct information on how the overall system is working.

Q. Dr. Menzie, did Dr. Glibert, the expert on theecology for the State of Florida, analyze thisdata?

THE REPORTING GROUP

Mason & Lockhart

1 the bay?

2 A. Information on the blue crab was present in these 3 collections. And I see no evidence that the blue 4 crab populations have declined or changed in any

5 way.

6 Q. Have you seen any evidence of any harm to the7 white shrimp population at any place in the bay?

8 A. I have not.

9 Q. Have you found any evidence of any harm to the

nursery function of East Bay?
A. I looked into the nursery function in terms of
the presence of the plants and in terms of the

13 abundance of the fish that live in that area, and

14 I specifically looked for baby fish. And I found15 no evidence that they had been harmed.

16 Q. Doctor, have you found any evidence of any harm17 to any species in the Apalachicola Bay?

18 A. I have not.

19 Q. You have assessed some of the work of Dr. Glibert,20 an expert for the State of Florida. Correct?

21 A. Yes.

Q. And can you please provide the Court with a briefsummary of your opinions regarding Dr. Glibert's

work.

24

2

25 A. I think Dr. Glibert, as I mentioned earlier, saw
THE REPORTING GROUP

Mason & Lockhart

4234

1 A. Dr. Glibert did not look at this information.

2 Q. Did you look at this data?

A. I looked at this information. It's -- I asked
 and chased after this information until I could
 get as much of it as was available so that I
 could --

7 Q. And what were your conclusions based on all of8 this data?

A. That the fish community of the bay, those are the plants that depend on those little tiny -- I mean, the fish that depend on those little tiny plants, the fish that eat other fish, that they're all present and still in the bay as they were back in the 1970's, and that their populations continue to be sustained regardless of whether it's a little wetter or a little drier.

Q. Okay. Dr. Menzie, in the course of your work and
analysis in this particular matter, have you seen
any evidence that any fish species in the
Apalachicola Bay is being harmed?

A. I have seen no evidence that these changes inflow have harmed any of these species.

Q. Have you seen any evidence of any harm to the
 blue crab population in East Bay or the rest of
 THE REPORTING GROUP

Mason & Lockhart

1 changes that have occurred during the summer

months in algae, for example, and then presumed

3 that those changes would cascade up through those

upper levels of the food web causing there to be
 changes in the upper levels of the food web. But

6 it was based on a presumption that that would

7 occur.

8 Q. And, doctor, are you aware that Dr. Glibert also

9 suggests that there have been changes in

10 nutrition at the base of the food web that have

affected species at upper levels of the food web?

12 A. One of her hypotheses is that there might be less

13 nutritive quality in a little tiny plant at the

14 base of the food web as they change, and that

that could cause a cascading effect up the food

16 web. So I know she has said that.

17 Q. Have you seen any evidence of impaired nutrition18 for any species in the bay as a result of the low

19 flows?

15

20 A. No, I have not.

Q. Doctor, I now want to talk about particularremedy scenarios and additional flow scenarios,

23 including the one that you analyzed. And counsel

for Florida referred to a 1,000 cfs scenario that

25 you looked at. And I want to first talk about

THE REPORTING GROUP

4239 1 the bay. 1 time. So I have looked at the data from the most 2 2 To assist your testimony regarding the remedy recent times into the '70's, and there doesn't 3 and additional flow scenarios that we're going to 3 seem to be any evidence that the variation from 4 talk about, I would like to ask permission to year to year or in salinities of this magnitude 5 publish a demonstrative; and we will distribute have brought about any change. 6 the demonstrative. 6 The second reason is that we're looking at 7 Now, Dr. Menzie, can you please describe for 7 kind of an average salinity here. And it's 8 8 helpful in an estuary to put that into the Court what this demonstrative shows, and 9 distinguish between the two columns. 9 perspective. So I know that at low flows, for 10 A. On the left is the remedy scenario that was 10 example, the salinity at any of these points in 11 computed by the State of Florida. And it 11 the bay or at East Bay or at Apalachicola Bay 12 presumes a -- as I understand it, a 50 percent 12 will fall within a range that could be as much as 13 cut in water consumption by irrigation and 13 15 parts per thousand. So that small changes in 14 perhaps some other factors. So that would result 14 that range are simply swamped; they're not 15 in more water basically entering the system that 15 noticeable. 16 16 Q. All right. And, doctor, turning now to the wasn't used in agriculture within Georgia. 17 And on the right, the 1,000 cfs additional 17 right-hand on this demonstrative, you ran an 18 18 flow scenario was one I looked at. And also, I analysis of a flow scenario that involved the 19 believe it's largely consistent with a scenario 19 addition of 1,000 cfs of fresh water. Correct? 20 20 that was put forward by Dr. Sunding on behalf of A. Yes. 21 21 **Q.** Could you please explain what your analysis Florida. And it basically adds -- simply adds 22 22 1,000 cubic feet per second of water to the river showed with respect to salinity changes of that 23 and looks at -- in either of these things looks 23 additional 1,000 cfs of flow? 24 24 A. Yes. So I believe this is for the Apalachicola at resulting changes in salinity. 25 Q. Now, looking first at Dr. Greenblatt's 50 percent 25 Bay. And my analysis looked across all the data THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4238 4240 1 cut scenario on the left-hand side of this 1 that were available and recorded. And based on a 2 2 screen, are you aware that Dr. Greenblatt modeled change of a thousand cfs in flow in the river, 3 3 this scenario for different years? you would expect something in the order of almost 4 4 A. Yes. 2011 and 2012. a nondetectable change in salinity up to perhaps 5 5 Q. And particularly, the results of Dr. Greenblatt's around 1.2 parts per thousand salinity. 6 modeling for this remedy scenario for the years 6 **Q.** So, Dr. Menzie, would the change in salinity in 7 7 2011 and 2012 showed what with respect to the bay attributable either to the 50 percent cut 8 8 salinity changes? remedy scenario or to the 1,000 cfs additional 9 A. The changes were, depending on where you were in 9 flow scenario have any effects at all on the 10 the bay, in the range of near zero to 2 parts per 10 ecology of the bay? 11 11 thousand or psu's of salinity. There were some Α. No. These -- these changes within the type of 12 locations near the mouth of the river, which is 12 variation in salinity that occurred in estuary 13 13 more sensitive to changes, if you will, in areas are extremely small. 14 freshwater flow where the salinity change was 3 14 Q. You're aware that Dr. Glibert has suggested that 15 parts per thousand. 15 even minor changes in salinity could impact the 16 Q. And were 2011 and 2012 low flow years? 16 ecology of the bay? 17 A. Yes. These were the drought years that got a lot 17 Α. No, I don't think she's correct. 18 of attention. 18 Q. And why not? 19 **Q.** Dr. Menzie, would you expect a change in salinity 19 Α. Because of the variation that exists within the 20 of up to 2 ppt in most areas of the bay, if the 20 bay, the animals and plants in the bay are 21 21 50 percent cut remedy were in place, to have any adapted to that kind of variation. So any tiny 22 22 effect on the ecology of the bay? change on the order of what we're talking about 23 23 here would essentially be unnoticeable. A. Yes. No, I don't. And the reason I hold that Q. 24 opinion is twofold. First, I have looked at the Now, with respect to the additional 1,000 cfs of 24 25 ecological conditions of the bay going back in 25 flow, you also looked at the impact on the THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

4241 4243 1 floodplain habitat. Correct? 1 1,000 cfs additional flow scenario have any A. Yes. 2 2 effect on the ecology of the bay, the river, or the floodplain? 3 Q. And what specifically did you look at? 3 A. No. A. The degree of flooding that would occur as you 4 increase the flow by certain amounts. MS. DeSANTIS: I have no more questions. 6 **Q.** And would the additional 1,000 cfs of flow have 6 SPECIAL MASTER LANCASTER: Recross? 7 an impact on the ecology of the floodplain? 7 MS. WINE: Just very briefly, your 8 A. No. It wouldn't have any impact on the ecology. 8 Honor. 9 It would result in small amounts of additional 9 Mr. Walton, could we pull up demo 7 that 10 flooding of areas, but not really on the ecology 10 Georgia's counsel just asked Dr. Menzie 11 of the system. 11 about. 12 Q. All right. Dr. Menzie, we're getting close to 12 **RECROSS-EXAMINATION** 13 the end here. 13 BY MS. WINE: 14 Florida has maintained, as you know, that 14 **Q.** Dr. Menzie, you testified about this 15 Georgia's consumptive use of water has harmed the 15 demonstrative which, according to your prefiled 16 16 ecology of the bay, the river, and the direct testimony, shows the natural and man-made 17 17 floodplain. First of all, setting aside the stressors on the ecological system of the river 18 18 and bay. Correct? concept of harm, has there been change in the 19 Apalachicola ecosystem over the time period that 19 A. Yes. 20 20 you examined? **Q.** Sir, where is consumptive use on this diagram? 21 A. Okay. I think of changes in different amounts of 21 A. As I introduced this diagram I mentioned that 22 22 time. So every year there are changes that will consumptive use is one of the primary stressors 23 occur in the system. In the bay, for example, 23 that we're looking at. So these are the 24 the changes in fish communities are large. Fish 24 stressors that we need to consider in evaluating 25 swim into the bay, reproduce, spend time, and 25 the role of consumptive use. THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart 4242 4244 1 then leave. In the summer months, there's a Q. Okay. You don't show consumptive use on this 2 2 change in the composition of the phytoplankton. diagram. Correct? 3 A. No; that's right. This is a background piece to So these changes we see every year. And they're 3 4 4 indicate what other stressors we need to not unexpected. 5 5 consider. Over long periods of time we look at $\boldsymbol{\mathsf{Q}}.\ \ \, \text{And if we were going to draw in consumptive use}$ 6 something that would be meaningful in terms of a 6 7 change in the population of fish. Let's say over 7 as a factor that starts influencing things here, 8 8 a decade, there have not been changes in the where would you draw it in on this diagram? 9 population status of the fish community of the 9 A. I would place the beginning of it, as I 10 bay. On even longer time scales, for example, on 10 understand it, from around 1970 to the present. 11 11 the forest, there have been changes. And as I Q. Okay. Thank you. 12 discussed earlier, those relate to some 12 Now, sir, I think you just testified that you 13 13 systematic changes in the flooding of the have seen nothing happening in the bay that could 14 floodplain that have occurred since the 14 be considered a material change and that you have 15 construction of the dam. 15 seen no evidence of any harm to any species in 16 **Q.** Looking back at harm, the concept of harm rather 16 Apalachicola Bay. Correct? 17 than change, have you found any harm in the bay, 17 A. I did say that, yes. 18 the river, or the floodplain attributable to 18 **Q.** Sir, you're aware there was an oyster crash in 19 19 consumptive use of water by Georgia? 2012. Correct? 20 20 A. My analysis very specific to that question did A. I was thinking of that very question as I 21 21 not indicate harm as a result of -- to any of answered that yes. I did not -- I did not look 22 22 those ecological components as a result of at the oysters. 23 23 consumption of water by Georgia. **Q.** Okay. So you're not trying to say that that 24 **Q.** Doctor, regardless of whether or not there is 24 wasn't a material change in the bay during the 25 harm, would the 50 percent cut remedy or the 25 recent time period. Correct? THE REPORTING GROUP THE REPORTING GROUP Mason & Lockhart Mason & Lockhart

18		So if I understand your testimony correctly, as Maine goes, so goes the nation?	17 18	SPECIAL MASTER LANCASTER: Who?
18 19		So if I understand your testimony correctly, as Maine goes, so goes the nation? THE WITNESS: There's a couple of things	17 18 19	SPECIAL MASTER LANCASTER: Who? THE WITNESS: Dr. Lipcius.
18 19 20		So if I understand your testimony correctly, as Maine goes, so goes the nation? THE WITNESS: There's a couple of things that are unique in that respect in Maine.	17 18 19 20	SPECIAL MASTER LANCASTER: Who? THE WITNESS: Dr. Lipcius. SPECIAL MASTER LANCASTER: Thank you.
18 19 20 21		So if I understand your testimony correctly, as Maine goes, so goes the nation? THE WITNESS: There's a couple of things that are unique in that respect in Maine. And Maine cares a lot about the environment	17 18 19 20 21	SPECIAL MASTER LANCASTER: Who? THE WITNESS: Dr. Lipcius. SPECIAL MASTER LANCASTER: Thank you. I'll tell him you recommended him.
18 19 20 21 22		So if I understand your testimony correctly, as Maine goes, so goes the nation? THE WITNESS: There's a couple of things that are unique in that respect in Maine. And Maine cares a lot about the environment and the Gulf of Maine and everything that	17 18 19 20 21 22	SPECIAL MASTER LANCASTER: Who? THE WITNESS: Dr. Lipcius. SPECIAL MASTER LANCASTER: Thank you. I'll tell him you recommended him. Now, at the risk of oversimplification,
18 19 20 21 22 23		So if I understand your testimony correctly, as Maine goes, so goes the nation? THE WITNESS: There's a couple of things that are unique in that respect in Maine. And Maine cares a lot about the environment and the Gulf of Maine and everything that goes with it. So some of the earliest	17 18 19 20 21 22 23	SPECIAL MASTER LANCASTER: Who? THE WITNESS: Dr. Lipcius. SPECIAL MASTER LANCASTER: Thank you. I'll tell him you recommended him. Now, at the risk of oversimplification, do I understand you to be saying that
18 19 20 21 22 23 24		So if I understand your testimony correctly, as Maine goes, so goes the nation? THE WITNESS: There's a couple of things that are unique in that respect in Maine. And Maine cares a lot about the environment and the Gulf of Maine and everything that goes with it. So some of the earliest research on coastal environments have been	17 18 19 20 21 22 23 24	SPECIAL MASTER LANCASTER: Who? THE WITNESS: Dr. Lipcius. SPECIAL MASTER LANCASTER: Thank you. I'll tell him you recommended him. Now, at the risk of oversimplification, do I understand you to be saying that underwater plants that are tolerant of

4249
I and that those that are intolerant to

- 2 salinity don't thrive well there?
- 3 THE WITNESS: That's right.
- 4 SPECIAL MASTER LANCASTER: Thank you.
- 5 Redirect?
- **6** MS. DeSANTIS: No questions, your Honor.
- 7 SPECIAL MASTER LANCASTER: Recross?
- 8 MS. WINE: No thank you, your Honor.
- 9 SPECIAL MASTER LANCASTER: Enjoy your
- 10 son.
- 11 THE WITNESS: Yes, thanks.
- 12 SPECIAL MASTER LANCASTER: Oh, I have
- 13 one more question. I'm sorry.
- You were shown this USFIG piece dated, I
- think, May 22, 2012. And you were asked
- **16** about work in consultation with the state to
- 17 identify alternatives to agriculture use or
- 18 incentives to reduce agriculture use of
- 19 water. That was one of the conservation
- 20 recommendations?
- 21 THE WITNESS: Yes.
- 22 SPECIAL MASTER LANCASTER: Would you
- tell me, please, how two states who cannot
- 24 even agree on the number of cases -- I'm
- 25 sorry, on the number of games that the Gators

THE REPORTING GROUP Mason & Lockhart

- 1 parties need to hash out a few logistical
- 2 issues about the video and the sequence in
- which it's played, I would suggest that we
- 4 recess, play those first thing in the
- morning, and then turn to Dr. Lipcius.
- 6 That would then only leave our economist,
- 7 Dr. Stavins. And the question would be
- 8 whether he could get on Thursday afternoon,
- 9 probably on the later side, or start first
- 10 thing Friday morning.
- 11 I think for scheduling purposes,
- 12 Dr. Stavins Friday morning would probably be
- 13 best. And I think that that would ensure
- 14 that we finish on Friday.
- MR. PERRY: That's fine with us, your
- 16 Honor.

19

21

- 17 SPECIAL MASTER LANCASTER: Is Dr. Stavins
- 18 in the area?
 - MR. PRIMIS: Not just yet. But he
- 20 teaches at Harvard, so we can get him here.
 - SPECIAL MASTER LANCASTER: I'm just
- 22 suggesting that he be available. Just in
- 23 case I'm not long-winded and we could get to
- 24 him, it would be very nice.

MR. PRIMIS: Okay. We'll make sure that THE REPORTING GROUP

Mason & Lockhart

4250

- 1 and the Bulldogs played can possibly agree on
- 2 something like this?
- 3 THE WITNESS: They have to put aside
- 4 parochial interests.
- 5 SPECIAL MASTER LANCASTER: Do you think
- 6 that would be possible?
- 7 THE WITNESS: I think that's the
- 8 challenge.
- 9 SPECIAL MASTER LANCASTER: Do you think
- they would be here if they could?
- 11 THE WITNESS: No.
- 12 SPECIAL MASTER LANCASTER: I don't
- 13 either.
- 14 Thank you.
- **15** Any other questions?
- 16 Okay.
- 17 MS. DeSANTIS: No, your Honor. Thank
- **18** you.
- 19 MR. PRIMIS: Your Honor, the next
- 20 witnesses are going to be two witnesses by
- 21 video, Dr. Pine and Dr. Havens, who have
- 22 written a number of the oyster-related
- 23 documents that we have discussed, and then
- 24 our oyster expert, Dr. Lipcius.
- 25 Given the time and the fact that the THE REPORTING GROUP
 - THE REPORTING GROUP

 Mason & Lockhart

- 1 happens.
- 2 SPECIAL MASTER LANCASTER: Let me just
- 3 finish by thanking you again, all of you, for
- 4 the rain. The weatherman's prediction for
- 5 tonight and tomorrow is driving, driving,
- 6 driving rain. I told my wife about it and
- 7 she said what, can you do? And I said, great
- 8 Scott, nothing. But we'll have to deal with
- 9 it.

12

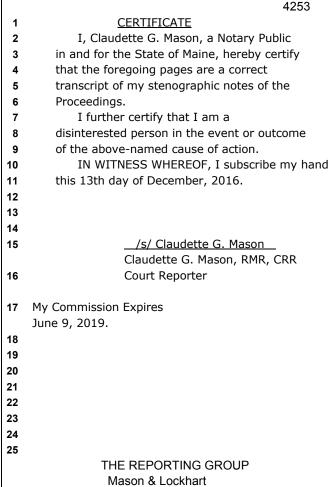

15

17

- 10 We'll recess.
- 11 MR. PRIMIS: Thank you, your Honor.
 - (Time Noted: 3:15 p.m.)
- 13 (Proceeding adjourned to Thursday,
- 14 December 1, 2016, at 9:00 a.m.)
 - (End of day)
- 16 - -
- 18
- 19
- 20
- 21
- 22
- 23
- 24 25
