PECOS RIVER COMPACT
Supreme Court of the United States
No. 65, Original
Amended Decree

Final Report of the River Master
Water Year 2000 - Accounting Year 2001
June 25, 2001

Purpose of the Report. In its Amended Decree issued March 28, 1988 the Supreme Court of the United States appointed a River Master of the Pecos River and directed him to "... Deliver to the parties a Preliminary Report setting forth the tentative results of the calculations required by Section III.B.1 of this Decree by May 15 of the accounting year..." and to consider "... any written objections to the Preliminary Report submitted by the parties prior to June 15 of the accounting year..." and to deliver "... to the parties a Final Report setting forth the final results of the calculations required by Section III.B.1 of this Decree by July 1 of the accounting year." This is the required Final Report with the determination of:

- a. The Article III(a) obligation;
- b. Any shortfall or overage, which calculation shall disregard deliveries of water pursuant to an Approved Plan;
- c. The net shortfall, if any, after subtracting any overages accumulated in previous years, beginning with water year 1987.

Result of Calculations and Statement of Shortfall or Overage. The results of the calculations in this Final Report show that New Mexico's delivery in Water Year 2000 was a shortfall of 12,300 acre-feet. The accumulated overage since the beginning of Water Year 1987 is 10,600 acre-feet.

Table 2. Determination of Flood Inflows, Alamogordo Dam to Artesia (B.3)

Table 3. Determination of Flood Inflows, Artesia to Carsbad, WY 2000 (B.4)

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that this is crucial for ensuring transparency and accountability in the organization's operations.

2. The second part outlines the various methods and tools used to collect and analyze data. This includes both traditional manual methods and modern digital technologies, highlighting the benefits of each approach.

3. The third part focuses on the role of human resources in the data collection process. It discusses how training and support for staff can improve the quality and reliability of the data collected.

4. The fourth part addresses the challenges and limitations of data collection. It identifies common issues such as data quality, access, and security, and provides strategies to overcome these challenges.

5. The fifth part discusses the importance of data security and privacy. It outlines the measures that should be taken to protect sensitive information and ensure compliance with relevant regulations.

6. The sixth part provides a summary of the key findings and recommendations. It emphasizes the need for a continuous and iterative process of data collection and analysis to ensure the organization remains up-to-date and effective.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that proper record-keeping is essential for transparency and accountability, particularly in financial matters. The text suggests that organizations should implement robust systems to track income, expenses, and assets, ensuring that all data is up-to-date and easily accessible.

2. The second section focuses on the role of internal controls in preventing fraud and mismanagement. It highlights that strong internal controls are not only a defense against external threats but also a means to ensure the integrity of internal operations. The document recommends that organizations should regularly review and update their internal control frameworks to adapt to changing risks and regulatory requirements.

3. The third part of the document addresses the importance of communication and collaboration within an organization. It states that effective communication is key to ensuring that all team members are aligned with the organization's goals and objectives. The text encourages the use of various communication channels, including meetings, reports, and digital tools, to facilitate the exchange of information and ideas.

4. The fourth section discusses the need for continuous improvement and innovation. It argues that organizations should not be satisfied with the status quo but should actively seek ways to enhance their processes, products, and services. The document suggests that organizations should foster a culture of innovation by encouraging employees to think creatively and experiment with new ideas.

5. The fifth part of the document covers the importance of compliance with relevant laws and regulations. It emphasizes that organizations must stay informed about the latest legal requirements and ensure that their operations are fully compliant. The text recommends that organizations should conduct regular audits and assessments to identify and address any compliance gaps.

6. The sixth section discusses the role of leadership in driving organizational success. It states that effective leaders are those who can inspire and motivate their teams, set clear goals, and make strategic decisions. The document suggests that organizations should invest in leadership training and development programs to ensure that their leaders are equipped with the skills and knowledge needed to lead their teams effectively.

7. The seventh part of the document addresses the importance of risk management. It states that organizations should identify, assess, and mitigate risks to ensure the continuity of their operations. The text recommends that organizations should develop a comprehensive risk management framework that covers all areas of the organization and is regularly updated to reflect changing risk profiles.

8. The eighth section discusses the importance of sustainability and social responsibility. It argues that organizations have a responsibility to their stakeholders to operate in a sustainable and socially responsible manner. The document suggests that organizations should integrate sustainability and social responsibility into their core business strategies and report on their progress to their stakeholders.

9. The ninth part of the document covers the importance of data management and analytics. It states that organizations should leverage data to gain insights into their operations and make data-driven decisions. The text recommends that organizations should invest in data management systems and analytics tools to ensure that their data is secure, accurate, and easy to analyze.

10. The tenth and final section of the document discusses the importance of employee engagement and retention. It states that organizations should focus on creating a positive work environment that attracts and retains top talent. The text suggests that organizations should implement various employee engagement strategies, such as flexible work arrangements, professional development opportunities, and recognition programs, to ensure that their employees are motivated and committed to their work.

RESPONSE TO STATES' OBJECTIONS

Final Report, Accounting Year 2001

NEW MEXICO'S OBJECTIONS

1. Flood Inflow, Carlsbad to Stateline. New Mexico objected to several aspects of the flood flow scalping methods and results contained in the Preliminary Report. New Mexico's final result was a flood inflow of 3,958 acre-foot, compared to the Preliminary Report's 3,671 acre-feet.

For the period March 20 to April 8, NM's objection is about judgment in determining hydrograph recession curves and in counting negative flood inflows. The quantities for this period are very small, and judgment in setting base flow levels is the main issue. The seemingly-negative flood inflow for April probably also results from lack of sufficient accuracy in data to determine base flows. NM's objection for this period is rejected because the flood inflows are not significant and lack of more accurate data prevents establishment of more precise base flows. The River Master noted NM's comment about October, but NM's results are about the same as the RM's, so no change is made. The River Master accepts NM's objection for August and has corrected Table 4 to reflect a flood inflow of 3.9 TAF.

2. The River Master accepts New Mexico's objection about errors in Table 6, Depletion Due to Santa Rosa Reservoir Operations. Corrections have been made. The RM could not check NM's value for December, and used the value shown in the revised Table 6.

3. The River Master accepts New Mexico's objection on Table 9, Lake Avalon Leakage Lagged, and has corrected the value.

4. The River master accepts New Mexico's objection on Table 12, and has corrected the data entries.

TEXAS'S OBJECTIONS

Texas objected to the USGS estimate of Base Inflow, Acme to Artesia, which was used by the River Master in the Preliminary Report. Texas reported that they had done a spreadsheet analysis, based on linear interpolation, and furnished two data tables and graphs. However, the RM could not follow all of Texas's computations. Texas did not provide a detailed summary of the base flow results or a revision of Table 2, so that its computations could be checked fully against USGS's computations. In any event, Texas's results only differed by 0.1 TAF from USGS's. Based on lack of enough detail to fully evaluate Texas's method and the insignificant difference in the results, the River Master rejects Texas's objection.

FINAL CALCULATED DEPARTURE.

The Preliminary Report's Final Calculated Departure was -12.9 TAF. New Mexico arrived at -12.3 TAF and Texas at -13.0 TAF. After considering the states' objections, the Final Determination is -12.3 TAF.
