P R O C E E D I N G S

MR. CHIEF JUSTICE BURGER: We'll hear arguments next in No. 544, Commissioner of Internal Revenue against Lincoln Savings and Loan Association.

Mr. Zinn, you may proceed whenever you're ready.

ARGUMENT OF MATTHEW J. ZINN, ESQ.

ON BEHALF OF PETITIONER

MR. ZINN: Mr. Chief Justice and may
it please the Court.

This federal income tax case is here on a Writ of Certiorari to the Court of Appeals for the Ninth Circuit. It raises a question that affects the tax liability of every savings and loan association that insures its depositors accounts with the Federal Savings and Loan Insurance Corporation.

Respondent is such an association.

During 1963, the only taxable year at issue, it paid a regular annual insurance premium for depositors insurance to the insurance corporation, amounting to approximately \$135,000.

This payment was required by Seciton 404 (b) of the National Housing Act, and the Commissioner allowed it as an ordinary and necessary business expense deduction under Section 162 (a) of the Internal Revenue Code. The treatment of this payment is not in dispute.

Also during 1963, Respondent contributed an additional

1 \$882,000 to the insurance corporation. This contribution was
2 required by Section 404 (d) of the National Housing Act, and
3 it is described in the statute as being in the nature of a
4 prepayment with respect to future premiums.

5 The question presented here is whether the \$882,000
6 is an ordinary and necessary business expense or 1963 on the
7 ground that it is simply an additional cost for current in-
8 surance as Respondent claims or whether as the Commissioner
9 urges the \$882,000 is a capital expenditure, which is deduc-
10 tible in future years if actually used to pay Respondents
11 regular annual insurance premiums or to meet insurance losses
12 of the insurance corporation.

13 In other words, the basic question here is not whether
14 a deduction should be allowed, but when a deduction should be
15 allowed.

16 Q Does it have to be one or the other?

17 A No, Mr. Justice.

18 Q Is it an ordinary business expense or a
19 capital expenditure? Frankly I have trouble seeing how it fit
20 into the statutory definition of either.

21 A Mr. Justice, let me deal first with the
22 capital expenditure---

23 Q ---don't have to decide this case, but I
24 wondered if those are the only two possible---

25 A Oh. Let me start with capital expenditure.

1 The term capital expenditure appears and is defined
2 in section 263 of the Code---

3 Q And it doesn't fit that definition.

4 A Right. That issue has been dealt with ex-
5 plicitly by Mr. Justice Blackmun when he sat on the Eighth Cir-
6 cuit, in a case called General Bank Shares Corporation, which
7 is not cited in either of the briefs but was cited below and it
8 was reported at 326 Fed. 2nd.

9 There Mr. Justice Blackmun, speaking for a unanimous
10 Eighth Circuit in a case in which this Court subsequently
11 denied Certiorari, said this about Section 263: "Section
12 263, with its denial of deductibility, for specified capital
13 expenditures, and Section 162 (a), with its grant of deductibility
14 for ordinary and necessary business expenses are not, of course,
15 mutually exclusive. Neither are they together all inclusive.
16 Section 263 obviously is not in itself an exclusive list of
17 non-deductible capital expenditures."

18 Apart from Mr. Justice Blackmun's comments in that
19 case, this Court only last term, in two unanimous decisions, in
20 the Woodward and (Hilton) cases, held that appraisal expenses
21 incurred in connection with evaluation of dissenting share hold-
22 ers stock, were non-deductible capital expenditures, but they,
23 too, are not new buildings or permanent improvements or better-
24 ments. And the Court did this, of course, without mention
25 of the fact that Section 263 has only a limited definition.

1 So I think it's fair to say, Mr. Justice, that this
2 Court has on innumerable occasions done that.

3 Q At least once.

4 A No, on innumerable occasions, as early as
5 1938, in Helvering v. Winmill, it held that brokerage expenses
6 in the acquisition of capital stock, are capital expenditures,
7 to be added to the cost of the stock.

8 Q And that increases the basis.

9 A Yes, sir. And capital stock itself, Mr.
10 Justice, is not described in Section 263, but we nevertheless
11 don't allow a deduction for it.

12 And so---

13 Q For what?

14 A Capital stock. If I go out and buy some---

15 Q For the purchase of---

16 A That's right,.For the purchase of capital
17 stock. It is a capital expenditure, which at least temporarily
18 cannot be deducted.

19 Q But a capital expenditure, as defined in
20 263 (a) at least those definitions and under ejusdem generis
21 other similar ones would not be the kind dealt with last term
22 in Woodward, nor would they be the kind coming under in the
23 general category of brokerage fees.

24 A No, the---

25 Q But would be expenditures that could be

1 depreciated annually. Depreciated. That's what 263 (a) says
2 to me.

3 A I'm not prepared to say whether 263 could
4 also include a non-depreciable asset, but I don't think it
5 really matters.

6 The point is that I think it's clear that capital
7 expenditures are more broadly defined than in Section 263 that
8 this Court, and so far as I know, all courts, have consistently
9 subscribed to that, we don't think it's any real bar to our
10 position here that the cost that we're talking about here are
11 not described in Section 263.

12 Q Well really perhaps what I'm asking is
13 very consistent with the language that you read to us from
14 Justice Blackmun's opinion in the Eighth Circuit. Is it nec-
15 essary to your argument when you say that these expenditures
16 do not come under 162 (a), is it necessary for you to say that
17 they do come under 263 (a)?

18 A I don't think it is, Your Honor.

19 Q You just have to stop with the first one,
20 don't you?

21 A Right, Mr. Justice, and that's what the
22 Court did in the Woodward and (Hilton) case---

23 Q You don't need to say that they're capital
24 expenditures, do you?

25 A We did not cite Section 263 in our brief.

1 Q I know you didn't.

2 A But---

3 Q Then you don't need to say that they're
4 capital expenditures.

5 A No. We call them capital outlays, I don't
6 think that the verbage is important. The question is what they
7 really are. And we don't---

8 Q Well, what they really are, of course,
9 depends on the verbage of the Internal Revenue Bill.

10 A Well, we rely on verbage of the Treasury
11 regulations, Section 1.461 which appears on pages 41 and 42 of
12 our brief, and reads, in pertinent part, that if an expenditure
13 results in the creation of an asset, having a useful life,
14 which extends substantially beyond the close of the taxable
15 year, such an expenditure may not be deduc-
16 tible, or may be deductible only in part for the taxable year
17 in which made.

18 Perhaps it would be helpful if I point out why it
19 is that we capitalize anything. Why do we capitalize buildings?
20 Now---

21 Q Would you mind giving me the name of Justice
22 Blackmuns case?

23 A Yes, sir. It's General Bank Shares Cor-
24 poration against The Commissioner, 326, Fed.2nd, 712, and the
25 material that I quoted was at 716.

1 The reason why we require the capitalization of
2 anything, as I was saying, in our judgement, is that if you
3 didn't capitalize, you would be charging against the income of
4 a single year cost of an asset that was going to benefit a num-
5 ber of future years. In the case of a building, for example---

6 Q And a building will depreciate over its---

7 A As you recover---

8 Q ---useful life.

9 A As you recover its costs.

10 Q Land you don't depreciate and shares of
11 stock you don't depreciate.

12 A But I was---

13 Q ---a matter of your basis.

14 A Right. But the point is that we require
15 capitalization in the first instance because to charge the
16 whole thing off would destroy the income.

17 And I would suggest to this Court, Mr. Justice, that
18 we'd have precisely the same rules if there were no Section
19 263 in the Internal Revenue Code, because Section 446 of the
20 Internal Revenue Code requires that income be reported clearly,
21 and it seems to us that a clear reflection of income in the
22 case of a cost that's going to benefit future years and can
23 properly be described as an asset within the meaning of the
24 regulation that I have quoted, is one that should not be deduc-
25 ted currently.

1 Q I think perhaps all of my problems are
2 caused by your characterizing this as a capital expenditure.
3 You don't need to , you simply need to argue that it's not
4 deductible under 162 (a).

5 A Right, but we didn't refer to capital ex-
6 penditure in the sense of the statute, but in the sense use
7 by Mr. Justice Blackmun.

8 At all relevant times, Respondent has been a member
9 of the Federal Home Loan Bank of San Francisco, and has insured
10 its depositors accounts with the Insurance Corporation.

11 Prior to 1962, Respondent was required to own stock
12 in its Federal Home Loan Bank in an amount at least equal to
13 2% of its mortgage loans, and to maintain this percentage of
14 ownership.

15 Respondent has always capitalized its purchases of
16 such stock. Also prior to 1962, it was required to pay an
17 annual insurance premium to the Insurance Corporation of 1/12
18 of 1% of all insured accounts and creditor obligation

19 This expense, corresponding to the \$135,000 premium of
20 1963, has always been allowed as an ordinary and necessary busi-
21 ness expense by the commissioner.

22 In 1961, Congress changed these requirements, effective
23 January 1, 1962, This change resulted in the present litigation.
24 First, Congress reduced the stock ownership requirement in the
25 Federal Home Loan Bank from 2% to 1% of mortgage loans.

1 Second, it continued the regular annual premium re-
2 quirement of 1/12 of 1% of savings accounts and creditor ob-
3 ligations.

4 And third, it imposed a new requirement in Section
5 404 (d) that in certain years, each insured institution con-
6 tribute 2% of any increase in its savings accounts and creditor
7 obligations during the preceding year to the Insurance Corpor-
8 ation.

9 Congress thought that the additional contributions
10 required under Section 404 (d) would be about the same as the
11 larger stock purchases that would have been made under the
12 prior act.

13 Indeed, if a savings and loan association has to
14 purchase any stock to meet the lower 1% requirement, its ob-
15 ligation under Section 404 (d) is reduced by that amount.

16 Regular insurance premiums recieved by the Insurance
17 Corporation are part of its gross income to the extent that
18 the Corporation does not use them to meet its current expenses
19 and losses, they are transferred to the Insurance Corporations
20 primary reserve, which the Corporation is directed to establish
21 in the National Housing Act.

22 That reserve contains its cumulative net income and
23 is available to meet losses if income of any year is insuffic -
24 ient. Section 404 (d) contributions, on the other hand, ones that
25 are here in dispute, are not considered part of the insurance

1 companies' gross income and are not added to its primary reserve.

2 They are transferred directly to the Insurance Cor-
3 porations' secondary reserve, which the Insurance Corporation
4 also is directed to establish in the National Housing Act.

5 Unlike the primary reserve, this secondary reserve is not freely
6 available to meet expenses and losses of the current year. It
7 may be used only to meet losses and only if all of the Corpor-
8 ations other accounts are first exhausted.

9 Once Respondent makes a regular annual premium payment
10 that payment is lost to it. The premium obligates the Corporation
11 only to provide insurance coverage for the current year.

12 On the other hand, the contributions to the Corpor-
13 ations secondary reserve create a beneficial interest in that
14 reserve. This interest is evidenced by annual statements which
15 the Insurance Corporation sends to each insured institution,
16 each year, advising it of its then current share of the second-
17 ary reserve.

18 Respondents share of the reserve amounted to nearly
19 \$5 million, as of the end of 1967. This share consists not
20 only of the contribution made by the insured institution but
21 also includes an annual return on investment at a rate equal
22 to the return earned by the Corporation on its investments.

23 Q Now that is credited to the individuals
24 account.

25 A That's right, Mr. Justice. The rate is av-

1 eraged 3 to 4½% annually, roughly.

2 Q Now are the 4 (d) payments annual or are
3 they terminated when the reserve gets to be a certain amount?

4 A If you could hold off, I'm just coming to
5 that. This is a rather complicated background, as you know---

6 Q Yes.

7 A ---and I'm trying to give the picture---

8 Q All right.

9 A ---in the way I think will make it simplest
10 to the Court.

11 Q I'm sorry.

12 A Although an insured institutions interest
13 in the secondary reserve is not generally transferrable, an
14 association may transfer its share in a merger, consolidation,
15 or other similar transaction. Moreover, an association is en-
16 titled to a cash refund of its share, if it withdraws from the
17 Federal Insurance system, or if it goes into voluntary or in-
18 voluntary liquidation.

19 I come now to consider how an associations share in
20 a secondary reserve is built up and how it is used to pay re-
21 gular annual insurance premiums.

22 Contributions to the secondary reserve, the ones that
23 are here in dispute, must be made until the primary and se-
24 condary reserves together equal 2% of all savings accounts and
25 creditor obligations of all insured institutions. When that point

1 is reached, the obligation to make secondary reserve contri-
2 butions is temporarily suspended.

3 While it remains suspended, an associations share in
4 a secondary reserve is used to pay its regular annual insurance
5 premium. This reduces its share in the secondary reserve.

6 Now if a particular savings and loan association
7 has no remaining share in the secondary reserve, while the on-
8 ligation to make contributions to the secondary reserve is
9 generally suspended, it pays its annual insurance premium in
10 cash.

11 The use of shares in the secondary reserve to discharge
12 the regular annual insurance premiums continues until the total
13 of the primary and secondary reserves falls below $1 \frac{3}{4} \%$ of
14 all insured accounts and creditor obligations.

15 Q Mr. Zinn, when the secondary reserve is so
16 used to pay insurance premiums, does the S & L then get a
17 deduction, at that point?

18 A Yes, Mr.---

19 Q ---for the amount used?

20 A For the amount that is taken out of the
21 secondary reserve and transferred to the primary reserve to pay
22 the regular annual premium for that year.

23 Q That's my question.

24 Q (immediately following) Just like if they
25 paid the premium in cash.

1 A Exactly, because they don't have to pay
2 it in cash when they pay it out of their share of the secondary
3 reserve.

4 That's why I stress the point. If a particular as-
5 sociation doesn't have any share in the secondary reserve, it's
6 going to have to come up with the money in cash instead of that
7 share.

8 Q But the termination of the use of the
9 secondary reserve to pay premiums isn't keyed to individual
10 companies, it's keyed to the total of primary and secondary
11 reserves.

12 A That's for the general obligation, but each
13 individual company is stuck with it's own secondary reserve.
14 For example, if you have---

15 Q I understand; if the primary and secondary
16 reserve remain above 1 3/4% and some companies secondary re-
17 serve is zero, then it has to pay.

18 A It has to come up with the money, right.

19 Contributions to the secondary reserve are renewed
20 as I have said, when the total of the two reserves falls below
21 1 3/4%. At that time, and until the total again reaches 2%,
22 contributions to the secondary reserve must be made.

23 Contributions to the Secondary reserve are permanently
24 terminated when the primary reserve alone reaches the 2% level.
25 Regular insurance premiums must be paid annually, either in cash,

1 or through use of an associations share in the secondary re-
2 serve until the primary reserve alone reaches 2% of all insured
3 accounts and creditor obligations, of all insured institutions.

4 When it does, any association whose full share in the
5 secondary reserve has not been used to pay regular premiums,
6 is entitled to a cash refund of its remaining share. Thereafter,
7 regular premiums must be paid whenever the primary reserve
8 falls below the 2% level.

9 All that this Court needs to understand about this
10 complicated arrangement is, that in some years, like 1963, an
11 association will be making regular premium payments in cash,
12 and also contributing to the secondary reserve in cash. In
13 other years, for example this year, it will make no cash pay-
14 ments, and its regular annual premium will be paid out of its
15 share of the secondary reserve.

16 I think the matter can be further clarified if we look
17 at what has actually happened since 1962 when this scheme went
18 into effect. From 1962 through 1969, Respondent paid regular
19 premiums in cash and also made contributions to the secondary
20 reserve.

21 In its view it is entitled to two deductions in each
22 of those years. We say that only the regular annual premium is
23 deductible. By the end of 1969, the total of the primary and
24 secondary reserves reached the 2% level. Consequently, the ob-
25 ligation to make payments to the secondary reserve was suspended,

1 and Respondents regular annual premium was paid out of its
2 share of the secondary reserve in 1970.

3 It will continue to be paid out of the secondary
4 reserve this year, and for the next several years. Respondents
5 position is that no deduction should be allowed during these
6 years. We say that a deduction should be allowed for the regular
7 annual premium.

8 In short, under Respondents method, deductions for
9 insurance coverage would be hunched in the years in which it
10 makes contributions to the secondary reserve. Under our method
11 the cost of the insurance would be spread over the entire
12 period by allowing a deduction each year for the regular an-
13 nual premium, irrespective of whether it is paid in cash, or
14 out of an associations share of the secondary reserve.

15 The tax court upheld the governments position in a
16 unanimous review decision, that these payments into the secon-
17 dary reserve constituted capital outlays, if I may use that
18 word.

19 The Ninth Circuit reversed in a two to one decision.
20 As I have said before our position here is based on the Trea-
21 sury Regulations that I quoted, and these regulations are not
22 challenged by the Respondent, they are not cited by the Res-
23 pondent in their brief, and they require that the government
24 show two requirements.

25 First, that an asset has been created, and second,

1 that that asset has a useful life extending beyond the close
2 of the taxable year.

3 Now we think this is shown by the undisputed facts
4 in this case.

5 Q Where do I find that regulation that you
6 were reading?

7 A On page 41 of our brief Mr. Justice, roughly
8 half way down. We say that Respondent acquired an asset because
9 it had an identifiable interest in the secondary reserve, evi-
10 denced by the annual statements furnished by the Insurance
11 Corporation. It is something that Respondent owns. It is
12 transferrable, in limited circumstances, to another. It earns
13 interest each year, based on the interest earned by the In-
14 surance Corporation.

15 And it has real value, which would be recognized, for
16 example, if Respondents parent corporation were to sell its
17 stock in Respondent to another.

18 We think it is clear that the buyer would pay more
19 for Respondents stock than it would for the stock of another
20 savings and loan association that was in all other respects,
21 similarly situated to Respondent, except that it had no interest
22 in the secondary reserve.

23 We also believe it is clear that Respondents secondary
24 reserve interest will provide a future benefit to Respondent,
25 and thus that it has a useful life extending beyond the close

1 of the taxable year. If Respondent remains in business, that
2 benefit will inure to it in the form of future insurance cover-
3 age. If it merges with another association, its parent will
4 benefit from its share in the secondary reserve by recieving
5 additional shares of stock in the surviving corporation. If
6 Respondent leaves the Federal Insurance system or goes out
7 of business, it will get a cash rebate of its share in the
8 secondary reserve.

9 If any amount remains in the secondary reserve, when
10 the primary reserve alone reaches the 2% level, that amount
11 will be refunded to Respondent in cash.

12 In short, Respondent will get a benefit from its
13 share in the secondary reserve in one form or another, in fu-
14 ture years.

15 I should like to reserve my remaining time for re-
16 buttal.

17 Q Just one question. There is a bit of a fuss
18 in your brief about that Weber Paper Company brief, our case,
19 I don't find it cited by your opposition here in their brief
20 and s take it that they're not relying on it. Do you have any
21 further comment on that case at all---

22 A No---

23 Q ---other than---

24 A No further comment other than what we said
25 in our footnote.

1 Q All right. Mr. Bennion?

2 Q (immediately following, by another Justice)

3 Which, I take it, you don't think the case is properly de-
4 cided.

5 A And whether or not so, Mr. Justice, not
6 applicable in these circumstances.

7 ARGUMENT OF ADAM Y. BENNION, ESQ.

8 ON BEHALF OF RESPONDENT

9 MR. BENNION: Mr. Chief Justice, and may
10 it please the Court.

11 We are certainly in agreement with the government
12 here that this question not to turn upon what the payments
13 in question really are or were. It is the taxpayers position
14 that in essence the payments were primarily insurance pre-
15 miums, and constituted ordinary and necessary business ex-
16 penses.

17 To go back to 1961 when the legislation in question
18 was introduced, each association was required to pay an in-
19 surance premium of 1/12 of 1% of the savings accounts and cre-
20 ditors obligations. I will not keep repeating creditors obli-
21 gations, but I refer to them by including them in savings ac-
22 counts.

23 Had the savings and loan industry remained static,
24 those insurance premiums of 1/12 of 1% would have produced
25 a 2% reserve in approximately 24 years, but of course, with

1 the tremendous growth of the savings and loan associations, to
2 continue to collect only 1/12 of 1% did not keep pace with the
3 ultimate insurance risk which the statute has imposed on the
4 F.S.L.I.C.

5 And therefore, Congress, when it introduced the Act
6 in question, stated in both of the committee reports that there
7 was general agreement that the some action should be taken to
8 build up the Corporations reserves at a faster rate after
9 pointing out the extent to which they had declined.

10 And therefore the legislation took the form of con-
11 tinuing the premium of 1/12 of 1% but the additional element
12 that was then introduced was that if any association had an
13 increase in its savings deposits it would have to pay this ad-
14 ditional premium of 2% of the amount of the increase.

15 And to us it is significant that this is right in
16 line with the element of a premium for insurance. It's an
17 attempt to measure the cost of protection by the increased risk
18 that the insurance company is put to.

19 For example, in our particular case, Lincolns savings
20 accounts at the beginning of 1962 amounted to approximately
21 \$90 million, and they increased during 1962 to over \$135 million
22 with the result that the potential insurance risk of the F.S.L.
23 I.C. which it was obliged by law to insure, was increased by
24 \$44 million.

25 And to us the essence of what Congress required was

1 that because of the additional insurance risk thus imposed upon
2 the F.S.L.I.C., there should be paid a 2% of that increase
3 as a premium.

4 Not a premium to take effect 10 years later when there
5 might be a bookkeeping entry transferring an amount from a
6 secondary reserve to a primary reserve, but an insurance risk
7 that was assumed immediately in 1962 because of the increased
8 savings accounts of Lincoln Savings and Loan Association.

9 So therefore, it seems to us that basically the
10 nature and the substance of what we paid was a premium measured
11 directly to the increased insurance risk assumed by the F.S.L.I.
12 C. and therefore it meets basically the criteria of an ordin-
13 ary expense.

14 On the other hand there undoubtedly may have been
15 associations which experienced no increase in their savings
16 deposits. As to such an association there would have been no
17 increased insurance risk assumed by the F.S.L.I.C.

18 There would have been no increased premium paid by
19 such an association. Which to us gives further illustration of
20 the fact that this really was in essence the payment for in-
21 surance risks.

22 Q Mr. Bennion, are you then making an ad hoc
23 approach to the taxpayers concern? You seem to draw a distine-
24 tion between one whose deposits had increased substantially and
25 one whose deposits had not increased substantially. Do I under-

1 tand you to imply, I don't think you said it flatly, that for
2 the latter one there would be no deduction?

3 A That is true, Your Honor, because there
4 would be no payment due. In other words, if an association did
5 not increase its deposits it would pay nothing more than the
6 original 1/12 of 1%. It would not pay this 2% and therefore,
7 having paid nothing, if of course, could be entitled to no
8 deduction.

9 The government has argued that by this approach---

10 Q Let me carry on one more issue. What, then,
11 is the statutory approach in setting out both 404(b) and 404 (d),
12 why do you think they're separated?

13 A This would have to be my own personal op-
14 inion because I cannot climb into the minds of Congress, but I
15 think it was primarily a device to bring about fairness. The
16 plan of the insurance statute from the very beginning has been
17 that there will come a time when the reserves reach a certain
18 point when all payment of insurance premiums will be suspended.

19 Under the original Act it was 5% and then it was
20 reduced to 2%. So there had been inherent in every payment, in
21 every premium the possibility of a future benefit, when that
22 reserve reached that point.

23 Now I personally think that the reason they adopted
24 this complicated formula and said we'll charge the growing as-
25 sociations an additional 2%, was that when the combined primary

1 and secondary reserves should reach 2% and therefore there should
2 be a suspension of payments, under the Congressional determina-
3 tion that 2% was high enough to cover the risk.

4 That early suspension would be available only to the
5 growing associations which had paid this additional premium,
6 whereas, if you had an association which had paid no secondary
7 premiums and there fore had no secondary account, there would
8 be nothing to transfer on their account and therefore they
9 would have to continue to pay the 1/12 of 1% premium until the
10 primary premium by itself got to be 2%.

11 And I believe that that is the only reason for this
12 exceedingly technical and complicated formula which was set
13 up just as a matter of fairness and I think it is fair. I think
14 that the associations that have been growing and have been
15 building up this fund and paying insurance, when the 2% was
16 arrived at which Congress thought was sufficient, that's fine.
17 Let's give these associations a little bit of surcease while
18 the others who have not been contributing will continue until
19 all of the funds are transferred over to the primary reserve.

20 Q As I understood you to say, and as I under-
21 stand the law, the Section 404 (d) payments are to be made
22 only by institutions whose depository increases.

23 A That is correct.

24 Q If they're not increasing there are no 404
25 (d) payments to be made.

1 A That's correct.

2 Now from a practical standpoint, the government has
3 referred to this transfer of a part of the Lincolns account from
4 the secondary reserve to the primary reserve as an event which
5 should give rise to a deduction at that time and also which
6 prevents a distortion of income.

7 I'd like to just call your attention to what seems to
8 me to be a true distortion of income. Under the governments
9 theory, and as the government says this transfer started as far
10 as Lincoln is concerned, in 1970. Under the governments theory
11 the original payment of this \$800,000 although it was completely
12 beyond the control of the taxpayer, and in our view had gone
13 for insurance, is set up on the taxpayers books as an asset.

14 Now in 1970, when the whole industry reserve gets up
15 to 2% and instead of having to pay the original 1/12 of 1%,
16 the taxpayer has the benefit of having transferred, let's say
17 \$500,000 from the secondary reserve to the primary reserve.
18 This has the effect on the financial status of the taxpayer,
19 of telling the public that its net worth has now decreased to
20 \$500,000.

21 And yet from a practical standpoint the day before
22 that transfer was made and the day after it was made, we had
23 exactly the same net worth as far as anybody could tell from th
24 the outside it's worth exactly what it was, and yet under the
25 governments treatment you show a decrease in net worth of a half

1 a million dollars.

2 Q Yes but there will be a half a million dol-
3 lars less expense that would normally be recorded as an ex-
4 penditure.

5 A No, Your Honor, because under the govern-
6 ments theory the expense is allowable in that year even though
7 no payment is due.

8 Q Why---

9 A If I understood Your Honors point. But it---

10 Q Well, I know, but you actually haven't put
11 put any money for it.

12 A that is correct.

13 Q Well, in another year you would have had
14 to actually deplete the resources of the company by a half a
15 million dollars.

16 A It seems to---

17 Q So you just end up with the same asset
18 value, I would think.

19 A No, I think,---

20 Q In a different account, but I think it would
21 end up the same way.

22 A The way it has worked out as the accountants
23 have worked it out for us is that if by deducting, in other words
24 by writing off this asset out of the secondary reserve which
25 appears as an asset on the balance sheet---

1 Q That is reducing the 886 by 500,000?

2 A Yes.

3 Q This is the way your accountants would
4 handle it?

5 A Yes, this is the way the government would
6 handle it, and this is the way we are required to do it by our
7 regulatory agency.

8 Q In other words the asset which had appeared
9 at 886 would now appear at 386?

10 A That's right.

11 Q Well what about the half million that is
12 now a deductible expense? By reason of the transfer--what happens
13 to that?

14 A It's just allowed as a deduction.

15 Q But tariffs would have been paid up for
16 those premiums, otherwise, or still is in your cash register.

17 A Well, that's true, Your Honor.

18 Q Well, so it's a washout, isn't it?

19 A I wish I were a better accountant, but the
20 way our accountants have explained it---

21 Q Well wouldn't it work out that way because
22 if your cash balance had shown 2½ million dollars but you had
23 had to pay out a half million, your cash balance would be 2
24 million. Plus 886. So now it's 2 million 5 hundred plus 386, isn't
25 it? So it's exactly the same thing. Isn't it?

1 A I must say that sounds right, Your Honor.

2 Q It sounds reasonable anyway, doesn't it?

3 A Yes, sir. Now the government has placed
4 stress upon this question on the fact that the secondary return
5 earns a rate of return which the statute requires the F.S.L.I.C.
6 to credit to the secondary accounts.

7 And it is true that the law does require such a cre-
8 dit, we have gone through in our brief the presentation in the
9 committee hearings by one of the savings and loan people who
10 was unhappy that this return was not going to be paid in cash
11 but nothing happened with that.

12 And from the standpoint of the taxpayer, it is seen
13 to us that this so-called return is really an illusory thing.
14 It is credited to---

15 Q What's it supposed to realized from?

16 A The F.S.L.I.C., Your Honor, has invested
17 most of its asset money in government bonds and by and large its
18 income consists of the returns.

19 Q So that this means that if your contribu-
20 tions were a half a million dollars to the secondary reserve,
21 and the secondary reserve had earned enough so that that half
22 million now becomes \$525,000, is that it?

23 A Yes.

24 Q Now do you have to return the \$25,000 as
25 income?

1 A Not in the year ---, Your HOnor, actually
2 what happens is the F.S.L.I.C. does not earmark its bonds as
3 between primary and secondary, it reports all of its investment
4 income as income and then it deducts from that whatever return
5 is credited to the secondary---

6 Q Does that \$886,000 on your balance sheet in-
7 clude any increment in the secondary reserve by reason of---

8 A No. The 886 is just dolely the amount we
9 paid in the year 1963. The account has subsequently been cre-
10 dited with this increment.

11 Q I see.

12 A But the, and so the amount as credited to
13 the secondary is then split up into the various savings and
14 loans in accordance with their respective accounts.

15 Now the revenue ruling which was passed upon by the
16 Internal Revenue Service on this whole question, held that the
17 secondary premium payments were dnot deductible because of all
18 of these limitations and possibilities of refund and what not.
19 Then they ruled on the question of whether these credits of
20 income would be taxable as income and the revenue ruling holds
21 that no, that the income is not subject to taxpayers demands
22 and is so fettered with conditions that it is not recieved
23 either actually or constructively.

24 So the ruling is that the return is not taxable at
25 the time it's credited but it will be taxable, become taxable,

1 when and if there are transfers made from the secondary reserve
2 to the primary reserve.

3 Now---

4 Q Well, let's see. If you have \$500,000 and
5 it earns \$100,000 so that now it's \$600,000 and your annual
6 premium is \$100,000, and they're suspended because it's paid
7 out of the secondary account, after you've got the \$500,000
8 that's your investment. Then the sixth year the increment is
9 used to pay your premium, in that year do you get the increment
10 as a deduction and also have to return the increment as income?

11 Q (immediately following) It's a washout.

12 A It's a washout.

13 Q You know, this isn't complicated, is it?

14 A It's really nothing, the Ninth Circuit when
15 we finished our argument there asked us if next time we wouldn't
16 bring a complicated case.

17 Q Yes.

18 A I'll tell you, the complication arising out
19 of what has just been mentioned here is tremendous. Actually,
20 the industry is facing this exact situation right now where, in
21 1970, there were transfers made out of the secondary, and the
22 associations don't know what was transferred, whether they're
23 contributions, whether the income, and therefore, my recol-
24 lection is that the only instructions that they have so far
25 is that the F.S.L.I.C. is to treat it the way you want it.

1 But it is true that as far as the income is concerned,
2 it seems to me that it would be a wash transaction. The income
3 would become taxable, and it would be deductible because ap-
4 plied on this obligation. But the whole business of crediting
5 this return, forgetting for a moment the possibility of refunds
6 on termination or liquidation, really is of no great moment.

7 The amount that's credited from the primary reserve
8 to the secondary reserve simply increases the secondary and de-
9 creases the primary, and yet any benefit to be derived by any
10 taxpayer depends upon when the combined primary and secondary
11 reserves reach 2%, so that the mere fact that one has increased
12 and the other decreased really is not that significant.

13 One of the final arguments of the government and in
14 this respect reliance was placed primarily on an argument which
15 the tax court of the United States developed, and that is that
16 the legislative history of this statute proves that the pay-
17 ment is not an insurance premium, it was intended as a capital
18 investment, in the F.S.L.I.C.

19 We have searched the legislative history and can find
20 nothing in support of this argument. The tax code even said that
21 the secondary reserve and the stock of the Federal Home Loan
22 Bank Board were fungible, which to us indicated a failure to
23 grasp the completely different functions of the two agencies.

24 The Federal Home Loan Bank Board is a credit organ-
25 ization and an association buys stock in that Board and thereby

1 becomes entitled to borrow funds. On the other hand, the FSLIC
2 is solely an insurance company and is concerned solely with
3 insuring the accounts of the savings depositors of the FSLIC.

4 The only reference between the two in Congress was
5 that in order to lighten the financial burden on taxpayers that
6 had to pay the additional 2% insurance premium, the amount re-
7 quired to be paid in for the bank stock was reduced from 2 to 1%
8 because as Congress said, there was general agreement that the
9 bank was overcapitalized, whereas the insurance company greatly
10 needed to expand its insurance reserves.

11 There is no connection whatsoever in function or
12 purpose of the two payments and we think that the fundamental
13 fallacy of the tax court here was this point that this was in
14 the nature of capital because it was fungible with the bank
15 stock. You see, there's absolutely no basis for that.

16 If it please the Court, I think that that covers most
17 of our arguments, other than those that we have set forth in
18 our briefs and this is a complicated thing. We certainly agree
19 with the government that the essence of these payments should
20 govern whether they are deductible or not. We think that the
21 government concedes that they were necessary expenses, we think
22 the facts show that they are ordinary in that all those faced
23 in a similar situation paid them, and we do not believe that
24 there was any element of a capital expenditure or a capital
25 investment involved here. I think that the Ninth Circuit Court

1 of Appeals should be affirmed.

2 Q Thank you, Mr. Bennion. Mr. Zinn, you have
3 about five minutes.

4 REBUTTAL ARGUMENT OF MATTHEW J. ZINN, ESQ.

5 ON BEHALF OF PETITIONER

6 MR. ZINN: Thank you , Mr. Chief Justice.

7 A few brief points. I think one of the difficulties
8 in addition to the mathematical difficulties in this case is
9 the fact that Respondent was required to both pay the regular
10 annual premium in 1963 and also to come up with the additional
11 money that would go into the secondary reserve, and this aspect
12 of compulsion is one that goes through a lot of tax cases and
13 a statement from this Court regarding its significance would
14 be most welcome.

15 I should like to put a hypothetical to the Court,
16 which raises---

17 Q Excuse me. Now what was the governments
18 position as to the 1/12 ---

19 A Oh, that's---

20 Q And what about the other one, paid the same
21 year?

22 A Paid the same year, no that is not deductible,
23 that is a capital outlay.

24 Q Yes. You figure it should be treated as
25 prepaid insurance premiums?

1 A Not quite---

2 Q Not quite?

3 A Just almost. The tax court has elaborated
4 in great detail why it could not be considered ---

5 Q And in the year when the secondary reserve
6 is resorted to for premium payments there are no payments in ---

7 A Well, no cash payments, but they still are
8 obligated to pay the regular premium.

9 Q Well, I know, but there are no payments
10 into the secondary reserve.

11 A That's right. They're suspended.

12 Q So that any payments into the secondary
13 reserve are never used to pay any kind of a current expense?

14 A That's correct. It's used to pay the future
15 premium.

16 Now this question of compulsion as we said I think is
17 very important and I'd like to put a simple hypothetical to the
18 Court to demonstrate what our position is.

19 Let us suppose there have been a lot of fires in a
20 particular area and a local ordinance is passed requiring each
21 business in that locality to obtain each year from the local
22 fire department a certificate of fire safety. Let's suppose in
23 order to obtain that certificate of fire safety, guards have to
24 be posted on the business premises each night and also a modern,
25 up to date sprinkler system has to be installed on the premises.

1 I would suggest that although the salaries of the
2 guards are ordinary and necessary business expenses, that this
3 Court would held unanimously that the cost of the sprinkler
4 system is a capital expenditure, this time within the meaning
5 of Section 263. Even though, if I may quote from the Respondents
6 brief, the purpose of making both expenditures is the same, the
7 compulsion of making both expenditures is the same, and the
8 consequence of not making both expenditures is the same.

9 Q Your point is, I gather, your suggestion is
10 that whether or not these expenditures are compelled has nothing
11 to do with the issue---

12 A Precisely, and the expression of this Court
13 on that issue I think would do a great deal to resolve a whole
14 lot of tax cases that are now pending.

15 Q Does anyone seriously raise any question
16 that the cost of the sprinkler system would be amortized over its
17 useful life? It

18 A It seems to us, Mr. Chief Justice, that
19 Respondents argument here, principle argument in its brief,
20 which they did not elaborate this afternoon is that it had to
21 pay the Section 404 (d) payments under the National Housing Act.
22 It had to pay them, that's what the Ninth Circuit said, that's
23 why they held adversely to the government. And we say that the
24 fact that you had to pay them isn't any more significant in the
25 resolution of this case than the fact that you're required to

1 put in the sprinkler system.

2 The question is, whether you have an asset within
3 the meaning of those regulations, with a useful life extending
4 substantially beyond the close of the taxable year. And that
5 question is the same whether it be a sprinkler system or the
6 contributions to the secondary reserve that are involved here.

7 Q Since you put a hypothetical to us, let
8 me put one to you, if I can, Mr. Zinn. Suppose that in this
9 insurance scheme you had a formula that fixed the amount to
10 be paid---

11 A Each year?

12 Q Each year, and then, based on actual ex-
13 perience, each year there was a refund. Now I realize that
14 mathematically it would be a little difficult to do that
15 each year, but suppose it could come. You would say, then,
16 that the dividend would reduce the total expenditure?

17 A Right. The hypothetical you put is very
18 similar to a ruling relating to the Federal Deposit Insurance
19 Corporation which is cited in both briefs and which we think
20 is not relevant. Under that ruling, the banks would pay a pre-
21 mium each year, and would get back any excess in the following
22 year. And the question was whether that was an ordinary and
23 necessary business expense and the Internal Revenue Service
24 ruled that it was.

25 The reason that it ruled that it was, was this: the

1 only reason the money wasn't paid back at the end of the same
2 year was that the FDIC couldn't go and make all the computations
3 to figure out how much was going to be needed to cover the
4 expenses and losses of that year.

5 You didn't have an asset with the useful life exten-
6 ding substantially beyond the close of the year. The refund
7 was made within a few months of the succeeding year. And as I
8 say, we rely on this regulation which we think squarely fits
9 this case.

10 I see that I'm out of time.

11 Q Thank you, Mr. Zinn, thank you, Mr. Bennion,
12 the case is submitted.
