Washington, D. C.

Tuesday, February 24, 1981

The above-entitled matters came on for oral argument before the Supreme Court of the United States at 11:56 o'clock a.m.

APPEARANCES:

MILTON B. CONFORD, ESQ., Wilentz, Goldman & Spitzer,
900 Route 9, Woodbridge, New Jersey 07095; on
behalf of the non-federal Petitioners in Nos.
79-1711, 79-1754 & 79-1760.

1 APPEARANCES (Continued):

2 ALAN I. HOROWITZ, ESQ., Assistant to the Attorney
3 General, U.S. Department of Justice, Washington,
4 D.C. 20530; on behalf of the federal parties as
Petitioners in No. 80-12 and as Respondents in
Nos. 79-1711, 79-1754 & 79-1760.

5 ROBERT P. CORBIN, ESQ., German, Gallagher & Murtagh,
6 Suite 3100, 1818 Market Street, Philadelphia,
7 Pennsylvania 19103; on behalf of the Respondents
other than federal.

MR. CHIEF JUSTICE BURGER: We will hear arguments next in Middlesex County Sewerage Authority v. the National Sea Clammers.

Mr. Conford, I think you may proceed whenever you are ready.

ORAL ARGUMENT OF MILTON B. CONFORD, ESQ.,

ON BEHALF OF THE PETITIONERS

IN NOS. 79-1711, 79-1754 & 79-1760

MR. CONFORD: Mr. Chief Justice and may it please the Court:

This action present important questions as to the consequences of the adoption of recent comprehensive water pollution legislation. One of these statutes, commonly known as the Clean Water Act, adopted in 1972 is an extensive revision of previous federal water pollution legislation. The second statute involved, commonly known as the Ocean Dumping Act, adopted in 1972, and also amended in 1977.

This is an action brought by an association of fishermen claiming to have been injured by pollution of the ocean by some six or seven New Jersey sewerage agencies and several New York agencies, all public agencies.

The action of the plaintiff is couched in several counts, the major one, based upon violation of these statutes. The District Court of New Jersey granted summary

1 judgment to the defendants based upon jurisdictional and sub-
2 stantive grounds. The Court of Appeals for the 3rd Circuit
3 reversed, and remanded for trial. Three issues evolved from
4 the differences of opinion between the district court and
5 the court of appeals, which this Court has certified for con-
6 sideration today.

7 These are, first, whether there was an implied
8 private remedy flowing from these statutes. Secondly, whether
9 private parties' plaintiffs have standing to invoke the
10 federal common law nuisance remedy declared by this Court
11 in Illinois v. Milwaukee. And third, whether if there is
12 such status for a private action it has been preempted by
13 the Clean Water Act and the Ocean Dumping Act in relation
14 to the complaint in this case.

15 In view of the time constraints that I am under in
16 this matter, I propose with the Court's leave to address the
17 second and third issues, on which I am opposed both by the
18 Solicitor General and the respondents. The Solicitor General
19 supports us only on the first issue, that concerning whether
20 there was an implied cause of action.

21 QUESTION: He agrees with you that there is not?

22 MR. CONFORD: He agrees with us that there is not.

23 QUESTION: In which event the case is over?

24 MR. CONFORD: The case? No. If there is no im-
25 plied cause of action there may be a federal common law

1 nuisance action.

2 QUESTION: I see. Yes.

3 QUESTION: But he disagrees with you on that?

4 MR. CONFORD: That is right. I turn to the second
5 issue, which will be found to share a common rationale with
6 the third issue as I develop it. That is, whether this Court
7 should today declare that there is an across-the-board remedy
8 available to anybody based on common law nuisance. An in-
9 quiry into that question cannot be approached without
10 a consideration of the context of the comprehensive statutes
11 as they now exist. In short the issue is, should this Court
12 now declare that there is a broad-based, across-the-board,
13 available-to-anybody, federal cause of action for nuisance
14 in the context of the simultaneous existence of these com-
15 prehensive regulatory water pollution statutes? I submit that
16 a consideration of the traditional, well-known bases for the
17 Court enunciating federal common law should dictate that such
18 a cause of action should not exist.

19 MR. CHIEF JUSTICE BURGER: We'll resume there at
20 1 o'clock on that point.

21 (Recess)

22 MR. CHIEF JUSTICE BURGER: Mr. Conford, you may
23 continue.

24 MR. CONFORD: Mr. Chief Justice, and may it please
25 the Court:

1 I should supplement what I said before the recess
2 by indicating that all of the sewerage agencies in this case
3 possessed United States EPA permits, both for the sewage
4 effluent and the sewage sludge dumping which are complained
5 of in this action.

6 Now, as I said before the recess, our conception
7 of the applicability of federal common law should be approached
8 in the context of the presently existing situation, not that
9 which existed when this Court last decided this question in
10 Illinois v. Milwaukee. What we are now confronted with is
11 the question of whether federal common law should exist on
12 an across-the-board basis in the context of the comprehensive
13 regulatory mechanism which is constituted both by the Clean
14 Water Act and the Ocean Dumping Act.

15 Our study of the occasions for declaring federal
16 common law as declared by this Court lead us to the conclusion
17 that there is no appropriate occasion now to declare federal
18 common law of the extent demanded by the plaintiffs in this
19 case. One illustration of traditional application of federal
20 common law is where a state is a party to an action, either
21 a state against another state or a state against citizens of
22 another state. In that situation, based upon the Constitu-
23 tion, there being no statute applicable this Court by neces-
24 sity has had to declare federal common law.

25 QUESTION: Well, is this an argument, Judge Conford?

1 In light of the statutes, there's just no room for that.

2 MR. CONFORD: What I'm trying to do, Justice
3 Brennan, is to indicate that of the generally accepted cri-
4 teria for applying federal common law, none is appropriate to
5 the present situation.

6 QUESTION: Without regard to others? In any event,
7 where there's a statute that regulates the subject matter.

8 MR. CONFORD: Where there's a statute?

9 QUESTION: A federal statute.

10 MR. CONFORD: Where there's a federal statute?

11 QUESTION: That displaces any room for federal
12 common law.

13 MR. CONFORD: Except to the extent that it is
14 thought necessary to supply statutory interstices. We main-
15 tain that in this case not only is there not the situation
16 of a state party, but there is no occasion for applying
17 interstices. What we have here is clearly not a situation
18 of interstitial law. We have an alternate rival system
19 attempted to be set forth: to wit, the federal common law of
20 nuisance, under which a judge, as Justice Douglas said in the
21 Milwaukee case, operates according to no fixed rules but he
22 is the chancellor, exercising his informed judgment as to
23 what should be.

24 QUESTION: Well, then that was said in the context
25 -- or put it another way, was that said in the context of

1 a private party suit?

2 MR. CONFORD: No, it was said in the context of a
3 state party suit. And that's why I say it is not applicable
4 here.

5 QUESTION: Which began as an original jurisdiction
6 case.

7 MR. CONFORD: Exactly. And the Court, in an effort
8 to serve its policy of not taking original jurisdiction,
9 labored to find an alternate basis for jurisdiction because
10 of its felt need that a state affected by pollution coming
11 from another state ought to be afforded a remedy.

12 Now, another common basis for applying federal com-
13 mon law or creating federal common law is when there is im-
14 plicated a distinct federal policy, sometimes statutory and
15 sometimes not, but the necessity of supplying uniformity so
16 that the same rule applies in all circumstances, whether
17 federal or state. We submit that that criterion for the
18 creation of federal common law equally does not exist here.

19 QUESTION: Would that be illustrated by the Lincoln
20 Mills kind of case?

21 MR. CONFORD: Yes. That was the determination that
22 there should be an action to enforce an agreement to arbi-
23 trate.

24 QUESTION: And that it should be --

25 MR. CONFORD: Applied uniformly, whether --

1 QUESTION: Uniformly; nationally applicable.

2 MR. CONFORD: Nationally, whether the problem arose
3 either in state or federal system.

4 QUESTION: Right.

5 MR. CONFORD: Now, clearly, that does not apply
6 here, the objective of uniformity. When you have two sys-
7 tems, one, federal nuisance law and the other, a regulated
8 statutory system, it's the opposite of uniformity. Depending
9 upon the plaintiff's choice to go tort law or go statutory
10 law, you can have two entirely different results. And even
11 in the tort situation itself, there is a built-in factor
12 against uniformity, because two federal district court judges
13 hearing approximately the same kind of a nuisance case could
14 arrive at different subjective judgments as to whether the
15 conduct of the defendant was reasonable. So we submit,
16 there again, there is no uniformity purpose in setting up
17 these remedies side by side.

18 I can't think of any other appropriate federal law
19 basis that would be applicable to these situations. I think
20 having negated those which are generally understood and
21 generally applicable, it must follow that it is not appro-
22 priate to create the federal common law remedy which our
23 adversaries advocate.

24 Now, that leads me to the issue of preemption.
25 We have an unusual type of preemption here. It is not

1 federal statute against state statute. It is federal statute
2 against federal common law. For this purpose I assume for
3 the sake of the argument that there would be a federal across-
4 the-board common law remedy. The applicable rule in this
5 situation is illustrated by Arizona v. California, in which
6 this Court held that notwithstanding the fact that the Court
7 had created a common law of equitable apportionment of waters
8 in an interstate stream, nevertheless, when the Congress
9 adopted specific legislation reallocating the distribution
10 of the waters of the Colorado River, that settled the question
11 and it supplanted federal common law of equitable apportion-
12 ment of water.

13 QUESTION: The word, then, is either supplanted,
14 displaced, whatever it is --

15 MR. CONFORD: Whatever it is --

16 QUESTION: But it's not preemption, because pre-
17 emption is reserved usually, as you said, to state and
18 federal controversies.

19 MR. CONFORD: But it's a type of preemption, and
20 this Court has certified --

21 QUESTION: Well, maybe it would be easier to under-
22 stand if we didn't use the word, preemption.

23 MR. CONFORD: Well, I think this Court certified
24 the question in those terms, because Justice Douglas sug-
25 gested in the Milwaukee case that a time might come when

1 comprehensive federal water pollution legislation might
2 preempt the common law. I agree with you that conceptually
3 it is not preemption, it's displacement, because Congress has
4 the last word. If Congress decides that the law should be
5 thus and so and it is contrary to pre-existing federal common
6 law, that's it, and --

7 QUESTION: It's just like a superseding statute.

8 MR. CONFORD: Exactly. And we maintain that that
9 is the situation here. Now, central to this inquiry is a
10 question of, does the reorganization of the federal water
11 pollution act, is it of a scope which should cause a different
12 approach than that which existed when the rudimentary water
13 pollution statute existed prior to 1972?

14 This Court has been instructed on that question by
15 the very able opinion of Judge Tone in the 7th Circuit, in
16 the Illinois-Milwaukee case which you heard in December, which
17 contains a very comprehensive discussion of the differences
18 between the rudimentary water pollution statute as it existed
19 prior to 1972 and as it exists now. But I think the best and
20 most pithy summary of what Congress intended to do and what
21 Congress thought of the old statute is a quotation from the
22 Senate Public Works Committee report on the 1972 amendments.

23 And here's what they said: "Water pollution
24 control in the past has been all too often sporadic, incon-
25 sistent, and improvised on an ad hoc basis." They said,

1 "Our major purpose in adopting this legislation is to estab-
2 lish a comprehensive, long-range policy for the elimination
3 of water pollution, making it clear to industry and munici-
4 palities alike what the water pollution performance will be
5 expected of them during the coming decade."

6 That states it better than I possibly could.

7 QUESTION: Before you finish with your argument,
8 will you explain your position with regard to the savings
9 clauses?

10 MR. CONFORD: Yes, I'll be glad to do that now.
11 I was going to do it later.

12 The question is, does the savings clause in both
13 of these statutes operate to compel the adoption of the
14 previously existing federal common law of nuisance? I say it
15 does not. In the first place, the reference is to statutes
16 and common law. In my judgment the legislature did not
17 actually mean federal common law when it said common law.
18 When Congress talks about common law, ordinarily I think they
19 mean state common law, general common law. Secondly --

20 QUESTION: Well, isn't that true throughout the law?
21 Common law without any adjectives means -- does not embrace
22 federal common law.

23 MR. CONFORD: You mean, whether it does?

24 QUESTION: Does not.

25 MR. CONFORD: It does not? That's my opinion.

1 Secondly, the argument that it means federal common
2 law is hardly realistic in the light of the fact that the
3 concept concerning federal common law in the water pollution
4 area was only developed by this Court in 1972. This legisla-
5 tion was going through the legislature and had adopted this
6 language before the Court spoke in 1972 in Illinois v.
7 Milwaukee.

8 And, thirdly, if it were to be accepted for the
9 sake of argument that it did mean federal common law, that
10 then puts the ball back in this Court's jurisdiction, because
11 it is for this Court to say what is appropriate federal common
12 law in that context. And for the reasons which I have already
13 developed indicating why federal common law in this area would
14 be inappropriate, that takes care of the savings clause, I
15 believe, completely.

16 Now, what they did mean by the savings clause, in
17 my judgment, was state statutes and state common law. For ex-
18 ample, the Water Pollution Act specifically invites states to
19 participate by adopting more stringent regulations, by setting
20 up area-wide water quality standards, and New Jersey, in fact,
21 has adopted legislation along both of these lines. New Jersey
22 adopted in 1977 both a water pollution control act consistent
23 with the federal act, and an area --

24 QUESTION: I gather the test, whether the state
25 rule, whether it's statutory or judicial, may operate, depends

1 on whether it's more stringent than the federal regulations.

2 MR. CONFORD: Exactly. But you could have state
3 common law. For example, there could be a state nuisance
4 action, there could be a state trespass action --

5 QUESTION: If it held up to a higher standard than
6 the federal statute?

7 MR. CONFORD: The New Jersey courts could adopt
8 the standards contained in the statute and in the regulations
9 as appropriate standards for conduct in common law actions.

10 QUESTION: Or still more stringent?

11 MR. CONFORD: They would have to be more stringent
12 as far as pollution permits are concerned, but they could, in
13 this case, fill in interstices in the federal regulations.
14 If there were a specific situation based upon water quality
15 of a particular body of water that EPA had not regulated, the
16 State of New Jersey could do so. And those standards would
17 apply in a New Jersey state court common law action.

18 QUESTION: But are you saying that the state common
19 law could only apply in an interstitial sense? What about a
20 case in which the state seeks to impose a common law rule that is
21 directly governed -- say, the federal permit says, ten parts
22 and the state common law rule says --

23 MR. CONFORD: If it were inconsistent --

24 QUESTION: More strict? More strict? If you comply
25 with both, by complying with state --

1 MR. CONFORD: It is permitted to be more stringent.
2 The statute expressly permits it to be more strict.

3 QUESTION: Even though it's the state common law?

4 MR. CONFORD: State common law would come along if
5 there were an action for trespass, an action for negligence,
6 an action for nuisance based on water pollution.

7 QUESTION: It would not be a defense to the state
8 common law action if there was compliance with a federal
9 permit?

10 MR. CONFORD: I think so. I think so. The state
11 statute could not supersede, could not be inconsistent with
12 the federal statute or federal regulations except to the
13 extent that a permit could be more stringent. The state
14 could require a more stringent regulation, because the Clean
15 Water Act expressly permits that.

16 Now, our adversaries would argue that there should
17 not be preemption in the loose sense that I've been using the
18 term preemption for the reason that all that the Clean Water
19 Act and the Ocean Dumping Act purport to do is to set stan-
20 dards but not to affirmatively, but not to constitute an
21 affirmative policy which would be impervious to a common law
22 action.

23 QUESTION: Are you suggesting, from what you say,
24 is it possible that each of the coastal states could have a
25 standard more stringent than the federal with respect to

1 offshore?

2 MR. CONFORD: Only as to their territorial waters.

3 QUESTION: Inside? Not the offshore?

4 MR. CONFORD: Inside; not the ocean.

5 QUESTION: That's three-mile limit, isn't it, along
6 the coast?

7 MR. CONFORD: I believe so, three miles from the
8 shoreline. Evidence of the fact that Congress intended to
9 give agencies involved in this situation, whether industrial
10 or public, time and reasonable standards, not perfection, is
11 evidenced by the fact that the Clean Water Act contains a
12 very numerous set of time regulations. Certain things have
13 to be done 180 days after the statute is adopted, certain
14 things have to be done 300 days later. By 1977 the public
15 sewerage agencies must achieve secondary treatment. By 1983
16 they must achieve what is described as the best practicable
17 waste treatment technology over the life of the works.
18 In the case of certain industrial pollutants that are particu-
19 larly harmful -- I'm now paraphrasing -- Congress has said
20 that there should be obtained the best available technology
21 achievable to result in reasonable progress to elimination of
22 pollution.

23 I therefore suggest that there is an affirmative
24 congressional policy not only to permit these agencies to
25 meet these standards, but to be given time. Congress realized

1 that a pollution situation which has developed for decades
2 couldn't be solved overnight, that it was necessary to apply
3 time stages in which these agencies could achieve the goal of
4 approaching a pollution-free situation.

5 MR. CHIEF JUSTICE BURGER: You're now into your
6 colleague's time.

7 MR. CONFORD: Thank you, Mr. Chief Justice.

8 MR. CHIEF JUSTICE BURGER: Mr. Horowitz?

9 ORAL ARGUMENT OF ALAN I. HOROWITZ, ESQ.,

10 ON BEHALF OF THE FEDERAL PARTIES: PETITIONERS IN

11 NO. 80-12; RESPONDENTS IN NOS. 79-1711, 79-1754 & 79-1760

12 MR. HOROWITZ: Mr. Chief Justice, and may it please
13 the Court:

14 I would first like to address the issue of the exis-
15 tence of an implied private right of action under the Clean
16 Water and the Ocean Dumping Acts. On this issue, the federal
17 petitioners urge that the judgment of the Court of Appeals be
18 reversed.

19 The Court of Appeals held that a private right of
20 action should be implied under both of these statutes, apart
21 from the citizen's suit provisions, thus enabling the respon-
22 dents, because they allege economic injury from pollution, to
23 bring this lawsuit both for injunctive and monetary relief
24 and against both the dischargers of pollution and the
25 Government agencies responsible for administering these

1 statutes. The standards for determining whether violations
2 of a regulatory statute might form the basis for an implied
3 private right of action are by now well-established by this
4 Court.

5 The fundamental inquiry is into the congressional
6 intent. And, as this Court noted in the Transamerica cases,
7 when Congress explicitly provides one remedy for violations
8 of a statute, it is strong evidence that it did not intend
9 that another private remedy be implied. In this case there
10 can be little doubt regarding Congress's intent. Both stat-
11 utes contain detailed provisions authorizing suits by private
12 parties as an aid to enforcement of the statutes. These
13 provisions are modeled on a prototype enacted in the Clean
14 Air Act Amendments of 1970 after extensive congressional
15 debate.

16 I will focus here on the specific citizen suit provi-
17 sion of the Clean Water Act. I believe a similar analysis is
18 applicable to the analogous provision under the Ocean Dumping
19 Act. Section 505 of the Clean Water Act authorizes a citi-
20 zen suit only in certain specified circumstances. A citizen
21 may sue any discharger who is violating an effluent limitation
22 established under the Act or a related order of the Adminis-
23 trator of EPA. The district courts have jurisdiction in such
24 suits to enforce the limitation and to assess the civil penal-
25 ties against the violator. A citizen may also sue the

1 Administrator himself to compel him to perform a mandatory
2 duty under the statute. Moreover, the Act establishes certain
3 specific procedural limitations on this action. These relate
4 to notice that must be given to EPA prior to suit, to absten-
5 tion from suit when the Government is pursuing its own en-
6 forcement remedies, and to venue.

7 There is simply no evidence nor any reason to be-
8 lieve that Congress intended to create by implication yet an-
9 other private cause of action for claims that cannot be
10 brought under the citizen suit provision, as plaintiffs' claims
11 in this case concededly were not brought under the citizen
12 suit provision.

13 The savings clause to which respondents point as
14 authority for this implied right of action means simply what
15 it says. Preexisting statutory rights and common law reme-
16 dies are preserved. Thus, in these statutes, Congress's in-
17 tent is clear. Congress carefully considered the extent to
18 which it wished to create a private right of action, and it
19 intended to create only the right that it specified.

20 Now, in our brief we have also discussed the other
21 Cort v. Ash factors and I will mention here only that, for
22 reasons explained there, it also counsels against the implica-
23 tion of a private right of action. I would like to note here,
24 however, that a refusal to imply the private right of action
25 sought by the respondents is quite consistent with the

1 purposes of these statutes.

2 The primary reason for the enactment of the Clean
3 Water Act as well as the Ocean Dumping Act was to place cer-
4 tain federal limitations on effluent discharges into our
5 nation's waters, and to provide for enforcement of these limi-
6 tations. Congress carved out a role in this scheme for citi-
7 zen participation but only as an aid to enforcement, for which
8 the primary responsibility rests with the Federal Government.
9 Congress did not deal specifically in these statutes with
10 remedies to compensate individuals for pollution damage that
11 they suffer except to note that the Act did not take away any
12 existing remedies. Thus no private right of action to com-
13 pensate the plaintiffs need be implied. Other remedies which
14 were preserved by the savings clause are their recourse for
15 the adverse effect of pollution that they suffer.

16 QUESTION: Mr. Horowitz, before you leave the
17 savings clause, you construe it as applying only to preexisting
18 remedies. Was there a previous -- prior to the enactment of
19 the statute was there a remedy for violating an effluent
20 standard? Isn't that a concept that was created by the
21 statute?

22 MR. HOROWITZ: Well, I think the simplest explana-
23 tion of that language in the statute is that the citizen suit
24 provisions specifically refer to suits to enforce effluent
25 limitations. That is the only type of suit that one might

1 have thought would have been preempted by that language.. Therefore
2 it seems to me reasonable that Congress used the words
3 "effluent limitation" again in the savings clause, just to
4 make it clear it's referring back to the original language
5 in the citizen suit provisions. Now, certainly --

6 QUESTION: Is it your position that the savings
7 clause did no more than preserve previously existing rights
8 of action, whatever they may have been, if any?

9 MR. HOROWITZ: That's right.

10 QUESTION: Or that it had, it preserved some sort
11 of private rights of actions, depending upon this very
12 statute?

13 MR. HOROWITZ: Well, we don't think it -- it did
14 not create any new causes of action.

15 QUESTION: The savings clause didn't, certainly?

16 MR. HOROWITZ: The savings clause didn't; right.
17 But it intended to --

18 QUESTION: Preserve preexisting causes, if any?

19 MR. HOROTITZ: -- preserve every single action that
20 had existed before. In other words, to make clear that the
21 citizen suit provision was establishing a new private action
22 limited to those --

23 QUESTION: Well, then, wasn't -- isn't Mr. Justice
24 Stevens correct in suggesting that until this statute came
25 along there was no such right of action? Even conceivably.

1 MR. HOROWITZ: The citizen suit provision refers to
2 any other relief, it doesn't refer only to effluent limita-
3 tions. It does refer to the phrase "effluent limitation" --

4 QUESTION: It does.

5 MR. HOROWITZ: -- but it said -- I don't think
6 there were these effluent limitations prior to the enactment
7 of the Clean Water Act.

8 QUESTION: There weren't; there were not. The
9 concept didn't exist, did it?

10 MR. HOROWITZ: No, the concept didn't exist; that's
11 correct. So that's right.

12 QUESTION: Well, you're referring to a nuisance
13 suit, common law nuisance claim that's preserved? What is
14 preserved? Would you give us some concrete illustrations?

15 MR. HOROWITZ: Well, certainly, the common law nui-
16 sance remedy was preserved; also any remedy relating to water
17 pollution under any other statute. States that --

18 QUESTION: That's where you and Mr. Conford part
19 company, at that point?

20 MR. HOROWITZ: As far as the federal common law,
21 that's correct.

22 QUESTION: Was there a common law nuisance right
23 of action in a federal court with no diversity --

24 MR. HOROWITZ: Yes, the Illinois v. Milwaukee case
25 was decided prior to the passage of the statute --

1 QUESTION: Yes, I know, but the state was a plain-
2 tiff there. I'm talking about --

3 MR. HOROWITZ: The state was the plaintiff.

4 QUESTION: A private nuisance action. Was there
5 any such thing? Do you know of any? Can you cite us any?

6 MR. HOROWITZ: No. Because the Illinois v. Milwau-
7 kee case was only decided a couple of months before it so
8 far as I know.

9 QUESTION: Which was the state, the state was the
10 plaintiff there.

11 MR. HOROWITZ: As far as I know, no private party
12 had sought to invoke that decision prior to the enactment of
13 this Act.

14 QUESTION: Well, then, what was there to save?
15 What federal rule --

16 MR. HOROWITZ: Well, Congress was just making it
17 clear that they were saving whatever there was to save.

18 QUESTION: Whatever existed.

19 QUESTION: Well, isn't there some truth to what
20 Judge Conford said that the court more or less cast about for
21 a reason to give the State of Illinois another forum in which
22 to try its case than this one, by saying that federal common
23 law was available?

24 MR. HOROWITZ: Well, the court gave many explana-
25 tions for why it was implying common law. It didn't say

1 that this was to be applied, to be restricted only to cases
2 that could otherwise be brought under the original jurisdic-
3 tion, and the reason for finding the federal common law of
4 nuisance was because of the overriding federal interest in
5 interstate pollution; I mean, controlling interstate pollu-
6 tion. I don't know what the court's reasoning was, but
7 they didn't say that they were doing it solely to divest
8 themselves of original jurisdiction in that case.

9 The State of New York has argued in its brief that
10 the federal common law of nuisance should be restricted to
11 cases that could otherwise be brought under this Court's
12 original jurisdiction, but I don't think there's any basis
13 for that and I don't think that the reasons that the court
14 gave in Illinois v. Milwaukee support that contention.

15 I guess I'm starting to get into the second issue
16 here, and if I can just, if I could respond one more time to
17 Mr. Justice Stevens' question: I don't think that that was
18 the best way to draft the savings clause, but I don't think
19 that the fact that they used the word "effluent" -- there is
20 a rational explanation for their use of the words "effluent
21 limitation."

22 QUESTION: Well, the rational explanation being
23 that if there is another remedy created under this statute to
24 enforce an effluent limitation, we don't want to tamper with
25 that remedy. And you're saying, yes, but the only other

1 remedy under this statute is the citizen suit provision;
2 there's no implied remedy.

3 MR. HOROWITZ: It just seems inconceivable that in
4 in enacting this detailed citizen remedy that Congress in-
5 tended to imply some other remedy without saying so, and by
6 doing it in this very mystical fashion, using the word
7 "effluent limitation" in the savings clause.

8 QUESTION: But if you don't read it that way, that
9 language is clearly superfluous. It would mean the same
10 thing if you just took out "effluent standard limitations."

11 MR. HOROWITZ: The clause is drafted as broadly as
12 possible. Congress just wanted to make it clear that they
13 weren't taking away any other remedies. Now, but -- there
14 may be some superfluities.

15 QUESTION: Although that doesn't answer the question
16 about what remedies existed, if any.

17 MR. HOROWITZ: Right. Now -- well, let me get to
18 that now, I guess.

19 On the issue of the federal common law of nuisance,
20 federal petitioners urge affirmance of the Court of Appeals
21 decision. Now, in Illinois v. Milwaukee, this Court recog-
22 nized the applicability of the federal common law of nuisance
23 to problems of interstate pollution because of the overriding
24 federal interest. Putting aside for one moment the question
25 of whether that's since been preempted by Congress, the

1 question here is whether that remedy is available to private
2 parties, or whether it's to be restricted to a state, the con-
3 text in which it was previously before the Court.

4 Extensive water pollution does not respect state
5 boundaries as it travels through the water. Now, the Court
6 gave several examples of previous decisions where it had
7 noted that interstate pollution, both air and water, was an
8 area that touched upon a federal interest and required
9 implication of a federal remedy. In the words of Judge
10 Friendly, "The interstate nature of the controversy here
11 makes it inappropriate that the law of either state should
12 govern." Now, given the existence of this federal common law,
13 there is no reason why it should not be made available to
14 private parties. This Court specifically noted in the Milwau-
15 kee case that the existence of a common law in that case
16 was not the consequence of the fact that the plaintiff was a
17 state. The interest in uniformity and difficulties in
18 applying state law equally support the application of federal
19 common law whether the plaintiff is the United States or a
20 private party.

21 QUESTION: And will you tell me again what the
22 basis of federal jurisdiction is?

23 MR. HOROWITZ: The basis of federal jurisdiction is
24 under Section 1331(a), because there's a federal common law.
25 The reason for the implication of the federal common law

1 is the need for a uniform standard to apply to an incident of
2 interstate pollution, as pollution crosses individual state
3 boundaries.

4 QUESTION: So a federal court has jurisdiction of a
5 common law nuisance cause of action because of 1331?

6 MR. HOROWITZ: Right. It presents a federal ques-
7 tion, the federal question being under the federal common law
8 of nuisance.

9 QUESTION: And this is only because this is an
10 interstate nuisance?

11 MR. HOROWITZ: Yes. Well --

12 QUESTION: Otherwise you'd overrule Erie v. Tompkins,
13 wouldn't you?

14 MR. HOROWITZ: Well, I'm not seeking to overrule
15 Erie v. Tompkins. There may be federal interests, for
16 example, the United States as a plaintiff, that may be
17 with or -- as an intrastate --

18 QUESTION: But that wouldn't be 1331 jurisdiction?

19 MR. HOROWITZ: Well, no.

20 QUESTION: That would be the other jurisdic-
21 tional statutes --

22 MR. HOROWITZ: Certainly, where a private party
23 brings a suit and there's no interstate effects, we agree
24 that the federal common law of nuisance does not apply.

25 QUESTION: And a federal court would not have

1 jurisdiction, would it?

2 MR. HOROWITZ: No, because there's no federal
3 question. The federal common law of nuisance does not apply.
4 So a suit could not be brought in the federal court, it would
5 be restricted to a state remedy.

6 Now, I'd like to make a couple points on the pre-
7 emption argument which Judge Conford has focussed on. First
8 of all, it is abundantly clear from these statutes that there
9 was no intent to preempt the common law of nuisance, neither
10 the Clean Water Act nor the Ocean Dumping Act. This is clear
11 both from the legislative history and from the savings
12 clause, and in the Clean Water Act the legislative history
13 specifically referred to actions that have been brought under
14 the federal common law of nuisance.

15 Now, the other bases that are ordinarily looked at
16 for this Court for preemption, at least in the state context,
17 also do not apply here. There is no conflict between the
18 federal common law of nuisance remedy and these statutes.

19 Similarly, the fact that --

20 QUESTION: Why do you say that, when the federal
21 statute provides for effluent limitations and specific permits
22 and so forth, and a federal nuisance remedy could simply in-
23 volve a single federal judge saying, well, I don't think the
24 EPA or whoever it is that administers the effluent permits
25 acted with sufficient stringency here. I'm going to reduce

1 the effluent limit.

2 MR. HOROWITZ: Well, I think that's -- considering
3 the preemption clause I think it's important to draw a dis-
4 tinction between whether a cause of action for nuisance
5 exists at all and what standards are to be applied on the
6 merits in determining whether there's a nuisance. Now, this
7 Court said in Milwaukee that the standards established under
8 the federal acts will be highly relevant to determining
9 whether a nuisance exists.

10 Now, if there's a permit -- and I should point out
11 that in this case the complaint alleges that the discharges
12 were in violation of permits, so there really is no defense
13 at all because of the permit. If there's a permit, then
14 that permit is relevant in determining whether there is a nui-
15 sance to the extent of what EPA considered in issuing the
16 permit. Now, what --

17 QUESTION: Do you think that the federal judge
18 could go beyond the permit and say, well, this permit allows
19 too much effluent and under the common law of nuisance I'm
20 going to say it's only half as much?

21 MR. HOROWITZ: Unless he found some deficiency in
22 what EPA did, I wouldn't --

23 QUESTION: Well, isn't there a statutory review
24 provision for EPA that a person dissatisfied by the permit
25 issued can appeal EPA's actions?

1 MR. HOROWITZ: Yes. But there are gaps in the
2 statute. The Clean Water Act does not control every kind of
3 discharge. There are certain conditions listed in our brief
4 in the Milwaukee case, but there are certain aspects of
5 discharges that were not covered by --

6 QUESTION: Just one question, if I may, before you
7 sit down. On this matter of uniformity that you seem to
8 press, taking Mr. Justice Rehnquist's illustration: one
9 district judge has imposed a more stringent standard; the
10 one in the next district might go the other way. Is that
11 not so? Another district judge in the same circuit? And
12 until the circuit settled it, you'd have no uniformity.

13 MR. HOROWITZ: Well, perhaps there's a little con-
14 fusion here. The choices, as I understand it, the municipal
15 petitioners are not arguing that there is no nuisance remedy,
16 the question is whether there is a federal remedy or whether
17 the plaintiffs must resort to a state remedy. So if the
18 goal of uniformity is advanced by having a federal remedy, in
19 a case like this where you have pollution and pollution
20 effects in two different states as well as in the ocean, if
21 there's a federal remedy, this can all be resolved by one
22 judge in one court in one action. If there are state remedies
23 there will have to be a suit in New York, I suppose, a suit in
24 New Jersey, possibly a suit in federal court. And the result
25 may be three different determinations by three different

1 standards, all to the same conduct. So, in that sense,
2 I think the uniformity rationale is much better served by
3 federal action.

4 QUESTION: You wouldn't have any uniformity until
5 finally all of these cases would work their way through the
6 circuits by conflicts up to this Court. You may have two,
7 three, five years before you'd have any uniformity in this
8 field. Is that what you're saying?

9 MR. HOROWITZ: Well, you would have uniformity in a
10 particular -- as far as a particular pollution incident. Now,
11 it's possible that you would have a different standard applied
12 in some suit in the State of Washington and in some suit in
13 the State of Florida, but the Clean Water Act itself takes
14 account of that sort of disparity. It entitles states to
15 have their own more stringent limitations. Thank you.

16 MR. CHIEF JUSTICE BURGER: Thank you. Mr. Corbin.

17 ORAL ARGUMENT OF ROBERT P. CORBIN, ESQ.,

18 ON BEHALF OF THE RESPONDENTS

19 NATIONAL SEA CLAMMERS ASSOCIATION ET AL.

20 MR. CORBIN: Mr. Chief Justice, and may it please
21 the Court:

22 A brief review of the factual background of this case
23 that is submitted is helpful to a full consideration of the
24 significant environmental issues present.

25 My clients are the National Sea Clammers Association.

1 and Mr. Gosta Lovgren, individuals who are commercial fisher-
2 men and ply their trade in the waters of the Atlantic Ocean
3 immediately adjacent to the State of New Jersey. During the
4 summer of 1976 there occurred what may be described as a
5 rapid and massive growth of algae in the geographic area
6 ranging from the southwest portion of Long Island to a point
7 approximately due east of the southern tip of the State of
8 New Jersey.

9 Specifically, what we complain about is that when
10 this massive algal bloom died, it settled on the ocean floor
11 creating a condition of oxygen deficiency or anoxia in and
12 about the waters on the ocean floor. As a result, there was
13 a tremendous amount of death and destruction to the marine
14 and other life of the ocean, and particularly with respect
15 to the ocean bottom dwellers who were not equipped to escape
16 the blighted area.

17 The impact of this algal bloom was especially dele-
18 terious since July is the normal spawning season, so it had
19 an impact not only on the existing stocks of fish and shell-
20 fish but future stocks of marine life in and about the
21 blighted area. As a result of this the commercial fishing/
22 clamming-related industries were virtually destroyed.

23 In their complaint we have alleged that this algal
24 bloom resulted from two differing types of conduct. It was
25 first alleged that the City of New York and various other

1 New York and New Jersey municipalities discharge sewage
2 sludge and other waste materials, many of which are highly
3 toxic, into the Hudson River and New York Harbor where it is
4 then carried out into the Atlantic Ocean.

5 The second and somewhat different aspect of the
6 causal part of this problem arises from the fact that various
7 municipalities ostensibly under the aegis of the Army Corps
8 of Engineers directly dump similar materials, including very
9 highly toxic substances, directly into the Atlantic Ocean
10 where it was actually transported out by boat and by barge.

11 Of the three issues that this Court designated to
12 entertain argument on, we first present argument with respect
13 to our position that the federal common law of nuisance has
14 not been preempted since this Court's first recognition of
15 that remedy in the leading decision of *Illinois v. City of*
16 *Milwaukee*.

17 As we have indicated in our brief, there are at
18 least three arguments which we maintain compel the conclusion
19 that the federal common law of nuisance not only continues but
20 is available for my clients in this case. First, an analysis
21 of the two statutes, of the two environmental statutes with
22 which we are involved. The Federal Water Pollution Control
23 Act and its amendments, and the Marine Protection Research
24 and Sanctuaries Act indicate that where Congress has chosen
25 to preempt an area either entirely or partially, it has done

1 so expressly. To cite but two examples.

2 First, under the Federal Water Pollution Control
3 Act, as I believe Judge Conford has already noted, the Federal
4 Water Pollution Control Act has preempted the authority of
5 a state, of any municipality within the state, or of any
6 similar agency from adopting or enforcing -- yes, sir? --
7 from adopting or enforcing any effluent standard or limita-
8 tion less stringent than that adopted pursuant to the author-
9 ity of the federal statutes.

10 QUESTION: But can't that be read as simply preempt-
11 ing, federal law preempting state law and not necessarily
12 precluding federal law preempting preexisting federal common
13 law?

14 MR. CORBIN: I don't think so, Your Honor. I be-
15 lieve they would have been much more explicit. I would fur-
16 ther suggest that that provision of the Federal Water Pollu-
17 tion Control Act must also be read in conjunction with the
18 savings clause of that statute, which I believe is even
19 clearer statutory language to this Court that they did not
20 intend to preempt the rights and remedies that already existed
21 at the time that the savings clause was enacted.

22 I would also submit that there is nothing in the
23 savings clause which indicates, other than perhaps the mis-
24 nomer which has been attached to it, to suggest that that only
25 reserved rights and remedies which existed as of the time it

1 was enacted, as opposed to the rights and remedies which would
2 grow out of a developing state or federal common law of nui-
3 sance or in other environmental areas --

4 QUESTION: Well, but, in the Illinois v. City of
5 Milwaukee, the court was quite specific about stating that
6 perhaps eventually federal common law would be superseded by
7 a federal statute too.

8 MR. CORBIN: I would certainly concede, Your Honor,
9 that that argument was made, but with respect, we would submit
10 that if that time is ever going to come, it certainly hasn't
11 come now. I think at the time the federal environmental
12 statutes were enacted, at least a part of the congressional
13 purpose and design was the recognition that the previously
14 existing statutes were inadequate in a number of respects,
15 not the least of which was the fact that whereas the previous
16 emphasis for environmental protection was thrust upon the
17 states, it was determined that for whatever reason the states
18 were simply not carrying out those dictates.

19 I think that a careful reading of the provisions
20 of the two statutes, the Clean Water Act and amendments, and
21 the Ocean Dumping Act, indicates that the approach currently
22 taken by Congress is to afford a full panoply of federal
23 protection, but that that protection to be provided is not
24 antagonistic but rather will be coextensive with the avail-
25 ability of private enforcement, particularly in the context

1 of this suit where you have individuals who are not just
2 claiming that the water that was polluted smelled bad, that
3 they couldn't fish or boat or enjoy other recreational activi-
4 ties normally attendant with the Atlantic Ocean. These men's
5 businesses were destroyed.

6 QUESTION: Well, why didn't Congress simply endorse
7 the common law of nuisance rather than provide for a whole
8 series of effluent limitations and that sort of thing, and
9 the EPA issues specific permits, and the Army Corps of
10 Engineers to permit dumping, and allow review of each of
11 those actions in federal courts?

12 MR. CORBIN: I would submit, respectfully, Your
13 Honor, that indeed Congress did endorse precisely that,
14 namely, the continued availability of the private damage
15 remedy where damages can be shown. We have cited in our
16 brief from the 1972 Senate report which considered the
17 Federal Water Pollution Control Act and clearly and unambig-
18 uously indicated that the private damage remedy remains where
19 damages could be shown, as indeed we maintain our clients can
20 show. And they also indicated that compliance with the re-
21 quirements of the Act would not be a defense to a common law
22 action for damages.

23 So, I think, as I attempted to indicate earlier,
24 Congress declared, took a completely different approach from
25 the earlier approach. Yes, there would be a full panoply,

1 a comprehensive regulatory and statutory framework. Far from
2 viewing the continued existence of a private remedy as being
3 antagonistic to that, as I believe my opponent has suggested,
4 Congress chose to permit that as a welcome conflict, if
5 indeed there was a conflict.

6 QUESTION: Well, at the time that was formulated in
7 Congress, had there been any cases affirming the existence of
8 a private action for damages for nuisance in a federal court
9 invoking independent federal jurisdiction of it?

10 MR. CORBIN: To my knowledge, Your Honor, there
11 had been no such cases at that time. But we would submit
12 that the savings clause cannot be read to mean that it only
13 preserves rights which existed as of the date of its enact-
14 ment. There is simply nothing to suggest that this Court
15 today, in 1981, in evaluating our case, must determine what
16 rights and remedies if any my clients had in 1972 when the
17 statute was enacted, when there is nothing in the statutory
18 language or in the legislative history that indicate that
19 there was a time lock on a court's analysis as to --

20 QUESTION: Except for the misnomer, "savings clause,"
21 and you say it's a misnomer?

22 MR. CORBIN: Exactly.

23 QUESTION: A savings clause ordinarily is just that,
24 a time lock, isn't it?

25 MR. CORBIN: I would agree that if it was a true

1 savings clause it would be that. Unfortunately, that mis-
2 nomer, as I have phrased it, has been attached and, I believe,
3 incorrectly.

4 QUESTION: Until this case, have there been inde-
5 pendent actions by private parties for damages for nuisances
6 invoking federal jurisdiction?

7 MR. CORBIN: Yes, there have, Your Honor. We cited
8 one in our brief, if I may, the Byram River decision.
9 Yes, Your Honor, the Byram River v. Village of Port Chester,
10 a Southern District of New York decision from 1975. I might
11 also add that --

12 QUESTION: Did that invoke federal jurisdiction
13 under 1331?

14 MR. CORBIN: Yes, Your Honor. They held that
15 standing to sue under --

16 QUESTION: It wasn't a diversity case?

17 MR. CORBIN: No, Your Honor. The specific juris-
18 diction for the district court was under the federal common
19 law of nuisance.

20 QUESTION: So, it was thought, there held to involve
21 a federal question?

22 MR. CORBIN: That's correct, Your Honor. I believe
23 I was proceeding into the second point of our argument,
24 namely, that the clauses -- I hesitate to use the word
25 "savings clauses," but for want of a better phrase at that

1 time, if I may be permitted to use that, the savings clauses
2 themselves and the legislative history, specifically the
3 Senate report accompanying the Federal Water Pollution Con-
4 trol Act Amendment of 1972, we submit clearly and unambig-
5 uously indicates that, yes, in a sense, these were savings
6 clauses, because they most certainly preserved all rights
7 and remedies existing as of the date the statute was enacted.

8 However, they do not have, as Mr. Justice Rehnquist
9 has suggested, a time lock to preclude the continued avail-
10 ability of new rights and remedies which might be developed
11 in the future by judge-made law under the federal common law
12 of nuisance.

13 QUESTION: Isn't that an assumption, that Congress
14 was buying a pig in a poke?

15 MR. CORBIN: I would not believe that to be the
16 case, sir, particularly if one remembers the history of the
17 development of this statute. The previous statute was, I
18 believe, woefully inadequate both with respect to the scope
19 of area covered as well as the inadequate remedies which were
20 provided. Indeed, that was one of the very reasons cited by
21 this Court in its decision in Illinois v. City of Milwaukee
22 where there was not even a mandatory conciliation or arbitra-
23 tion type provision with respect to disputes over interstate
24 pollution.

25 QUESTION: Well, in your Byram River case, supposing

1 there had been an effluent permit granted, and the district
2 court said, we think EPA was just all off base here, and
3 therefore we're going to cut the amount of effluent in half.
4 Now, do you think that Congress welcomed that sort of con-
5 flict when it adopted the Water Pollution Control Act?

6 MR. CORBIN: Yes, I do, sir, and I would submit
7 that that so-called conflict, we certainly recognize it as a
8 real one, but would submit that the conflict of that nature
9 already exists and indeed my opponent urges that it continue
10 to exist. We submit that there is no greater conflict or
11 potential conflict with respect to what we are asking than
12 the situation exists under Illinois v. City of Milwaukee where
13 in your example, if I may borrow it, sir, the judge says,
14 well, I can't award damages, but I'm going to order you to
15 completely stop dumping, and therefore be limited to injunc-
16 tive relief. I believe that that capability, that potential
17 for conflict, is indeed welcome.

18 To cite but another example, that under the Federal
19 Water Pollution Control Act the states are free to adopt more
20 stringent limitations, effluent limitations, than are pre-
21 scribed, if at all, under the federal statute.

22 QUESTION: Well, what is the person who has the
23 effluent permit supposed to do when the district judge tells
24 him, no, you can only do half of what the EPA has told you
25 you can do?

1 MR. CORBIN: Well, before that question is reached,
2 sir, I believe that there is a further safeguard for that
3 person, and that is particularly with respect to the standards
4 to be applied to determine whether something is in violation
5 of the federal common law of nuisance or, indeed, constitutes
6 a public nuisance. Though we don't believe it's necessary for
7 this Court to reach the issue, we would certainly be satis-
8 fied if this Court were to adopt the standard suggested by
9 the 3rd Circuit which, as you know, was the restatement of
10 torts, definition of a public nuisance.

11 Not only must the existence of the public nuisance
12 be determined, but the comments, the official comments to
13 that restatement provision suggest that where, as our oppo-
14 nents have suggested, there is a comprehensive legislative
15 or regulatory framework which has been imposed to prescribe
16 or regulate a given conduct, the courts are especially loath
17 to describe the conduct regulated as being a violation of a
18 common law. So I do not see that there would be any particu-
19 lar difficulty with a federal judge being confronted with
20 that situation.

21 We will frankly concede that we have, even if this
22 Court were to affirm the findings of the 3rd Circuit, my
23 clients have a difficult road ahead of them in terms of the
24 evidentiary burdens to be overcome. We would only ask that we
25 be given the opportunity to meet those burdens at trial.

1 One other comment which I wish to address with
2 respect to the continued need for the federal common law of
3 nuisance. As my opponent has indicated previously, the state
4 authority to regulate to the extent to which it exists at
5 all on the Atlantic Ocean goes no further out than the three-
6 mile limit.

7 We have alleged in our complaint a situation where
8 there is a certain degree of pollution within that three-
9 mile limit, but there is also a certain degree of pollution
10 from this algal bloom in the next area going geographically
11 from the shore, and that is in the 12-mile-limit area.

12 We submit that the only law which can apply in that
13 area within the 12-mile limit in which the states do not have
14 any authority to regulate has to be the federal common law of
15 nuisance, and indeed the geographic area, or at least a por-
16 tion thereof, which was affected is precisely one of the
17 remaining interstices in which the federal common law must
18 apply.

19 QUESTION: Mr. Corbin, may I just ask -- I under-
20 stand your common law theory, but your statutory theory, your
21 implied cause of action theory, do you allege that the
22 defendants violated the effluent limitation?

23 MR. CORBIN: Yes, we do, Your Honor. We -- our
24 thrust is twofold. Contrary to the assertions in some of the
25 briefs, it has never been established as a matter of record,

1 and indeed we intend to plead, as we have alleged, that
2 permits under both statutes, the dumping permits under the
3 Ocean Dumping Act and the permits to discharge the sewage
4 and sludge, that those dumping and discharging activities
5 were in violation of permits which were issued as well as
6 the rules and regulations under which the permits are issued.

7 QUESTION: Are you still able to make those claims
8 by giving the 60-day notice?

9 MR. CORBIN: Without giving the 60 days, or --

10 QUESTION: No, with, giving, say you did it, you
11 gave notice today? Could you still make those claims?

12 MR. CORBIN: I believe we could. However, we may --

13 QUESTION: Why couldn't we have avoided the whole
14 implied cause of action issue by having you give notice a
15 couple of years ago?

16 MR. CORBIN: Well, the difficulty with that, Your
17 Honor, as we argued unsuccessfully to the district court,
18 somewhat more successfully to the 3rd Circuit -- as Your Honor
19 may recall, the 3rd Circuit indicated that could have been an
20 alternate basis to support our federal statutory claims.
21 We filed our complaint in January of '77. The conduct
22 about which we complain, and its effect, was over by the fall
23 of 1977. It was rather futile to request an end to the
24 activity that had already destroyed the fishing industry
25 off the coast of New Jersey.

1 QUESTION: Oh, I see, and your 60-day -- that claim
2 would not be a damage claim, would it?

3 MR. CORBIN: That's correct, sir. And, I may also
4 add that neither of the two statutes permitted private damage
5 claims.

6 Contrary to the assertions of Judge Conford that
7 what we were seeking is a broad and far-ranging sort of
8 relief, the relief which we request and which we submit we
9 are entitled to under the federal common law of nuisance is
10 going to involve a relatively small class of individuals.

11 We request this Court not to adopt the narrow and
12 overly restrictive reading of the rationale of this Court's
13 1972 decision of Illinois v. City of Milwaukee. As that
14 Court indicated, it was not merely the character of the par-
15 ties, the fact that a plaintiff was suing a sovereign entity
16 not within its own jurisdiction, that led the Court to apply
17 the federal common law of nuisance.

18 The Court held there, and we maintain that holding
19 is applicable here, that where there are, such as here, an
20 involvement of an interstate waterway, particularly a situa-
21 tion where there is truly an interstice, or actually, a
22 vacuum, with respect to the non-application of any other law
23 other than the federal common law of nuisance, that certainly
24 the rationale of the City of Milwaukee decision remains.

25 I believe my time has ended, unless there are

any questions. Thank you.

MR. CHIEF JUSTICE BURGER: Judge Conford, do you have anything further?

MR. CONFORD: Nothing further, sir; thank you.

MR. CHIEF JUSTICE BURGER: Very well. Thank you, gentlemen. The case is submitted.

(Whereupon, at 1:34 o'clock p.m., the case in the above-entitled matter was submitted.)
