IN THE SUPREME COURT OF THE UNITED STATES

-----:
:
DONALD PAUL HODEL, ACTING SECRE-:
TARY OF THE INTERIOR, ET AL.,:
:
:
Appellants, :
:
:
v. : No. 80-231
:
INDIANA ET AL. :
:
-----:

Washington, D. C.

Monday, February 23, 1981

The above-entitled matter came on for oral ar-
gument before the Supreme Court of the United States
at 2:01 o'clock p.m.

APPEARANCES:

PETER BUSCEMI, ESQ., Assistant to the Solicitor
General, U.S. Department of Justice, Washington,
D.C. 20530; on behalf of the Appellants.

G. DANIEL KELLY, JR., ESQ., 111 Monument Circle,
Indianapolis, Indiana 46204; on behalf of the
Appellees.

MR. CHIEF JUSTICE BURGER: We will proceed to hear arguments in the case of the Secretary v. Indiana.

Mr. Buscemi, I think you may proceed whenever you are ready.

ORAL ARGUMENT OF PETER BUSCEMI, ESQ.,

ON BEHALF OF THE APPELLANTS

MR. BUSCEMI: Mr. Chief Justice and may it please the Court:

This case is much the same as the Virginia case, and with respect to at least the Tenth Amendment and the Commerce Clause, I'm pretty much content to rely on what has already been said and what's said in the brief.

This case is here on direct appeal from the District Court for the Southern District of Indiana. The statutory provisions challenged here are different and far more numerous than those invalidated by the Virginia District Court, and I'd like to begin by describing briefly the portions of the Act that are at issue here.

The first group of statutory provisions are the so-called prime farmland provisions. Those are six subsections of the Act that impose special requirements where a mine operator proposes to undertake surface mining operations on lands that satisfy the Secretary of Agriculture's definition of prime farmland -- and this is something that tends to be

1 ignored in the District Court's consideration of the case and
2 in appellees' brief -- that historically have been used for
3 intensive agricultural purposes. So this is just not some
4 land that someone classifies as prime farmland on the basis
5 of a soil sample. This is land that has been used intensively
6 for agricultural purposes.

7 QUESTION: And it's your position that Congress
8 under the Commerce Clause can freeze that classification? If
9 it was once used as prime farmland, it's going to be prime
10 farmland?

11 MR. BUSCEMI: That's not what the statute does,
12 Mr. Justice Rehnquist. The statute only says that if surface
13 mining is undertaken on prime farmland, then before the permit
14 is issued the operator has to demonstrate that his techno-
15 logical capability to restore that land to equivalent or
16 higher levels of yield as non-mined prime farmland in the
17 surrounding area under equivalent levels of management.
18 So the statute simply says that if you've got prime farmland
19 and it's been used as prime farmland, and you propose to
20 surface mine it, when you finish you've got to put it back
21 into the same productive condition that it was in before.

22 QUESTION: And to keep it that way for five years?

23 MR. BUSCEMI: There is the provision that there
24 has to be revegetation and that revegetation has to exist for
25 a period of five years. There is some question about how the

1 Act is interpreted and applied in this respect. The Secre-
2 tary issued a regulation requiring the growing of row crops.
3 That regulation was invalidated by the District Court in the
4 District of Columbia. The Secretary has appealed that to the
5 D.C. Circuit, but of course there is no way of knowing right
6 now what the D.C. Circuit will do or whether the new Adminis-
7 tration will continue all of these policies, including this
8 one. So that, at least, as for right now, the row crop regu-
9 lation is not in effect and all we're talking about is revege-
10 tation.

11 Now, the operator will also have to show that he
12 can meet the soil reconstruction standards for prime farmland.
13 They require that the different topsoil layers be removed
14 separately and restored separately.

15 There are also a number of other generally applica-
16 ble provisions, that is, not applicable only to prime farmland,
17 that were challenged in the Indiana case and not in the
18 Virginia case. They include the general requirement that
19 topsoil be removed separately and the general requirement
20 for the submission of reclamation plans before the
21 beginning of surface mining. These plans are supposed to
22 tell the regulatory authority, whether it's a state authority
23 or the federal authority, what the premining use of the land
24 is, what the postmining proposed use is, and describe the
25 methods by which the postmining use will be achieved.

1 And finally there's a challenge in the Indiana case
2 to Sections 522(a), -(c), and -(d) of the Act, also not chal-
3 lenged in the Virginia case, that involve the establishment
4 of procedures for designating land as unsuitable for surface
5 mining. Section 522(e), which is the statute that prohibits
6 mining within specified areas of roads, schools, parks, and
7 churches, and so on, was also challenged in the Indiana case
8 as was the civil penalty provision.

9 Now, perhaps I can talk first, since I didn't reach
10 it in the other case, about the Just Compensation Clause
11 point. In this case, as in the Virginia case, our first posi-
12 tion is that the Just Compensation argument is premature here
13 because we're not focussing on any particular piece of land.
14 That makes the case different from the vast majority if not
15 all of the cases in which this Court has considered taking
16 challenges to state or federal regulatory actions.

17 Neither the plaintiffs in the Indiana case nor those
18 in the Virginia case have focussed on any particular piece of
19 property --

20 QUESTION: You mean that issue could be raised at a
21 later point by another litigant.

22 MR. BUSCEMI: Absolutely, Mr. Chief Justice. As
23 this Court said in *Agins v. Tiburon*, just last term, the
24 only issue here is whether the mere enactment of the statute
25 constitutes a taking, because we don't know how the statute

1 is going to apply to a particular piece of property. We can
2 evaluate the other beneficial uses that might be available to
3 the property owner.

4 QUESTION: But that is interpreting a California
5 statute where the California courts had held there was no such
6 thing as inverse condemnation. And as I understand, the
7 Tucker Act provides that there is inverse condemnation.

8 MR. BUSCEMI: Well, the Tucker Act certainly does
9 provide a monetary remedy for alleged violations of the
10 Constitution. Now whether the Tucker Act would give a remedy
11 to an individual landowner on the basis of a regulatory piece
12 of legislation like this is something that has not really
13 been addressed by the Court of Claims. There is one indica-
14 tion in the Eastport Shipping case that was cited in the
15 brief that perhaps the Court of Claims would think that the
16 Tucker Act jurisdiction does not go that far, but I completely
17 agree, Mr. Justice Rehnquist, that the availability of the
18 Tucker Act is a factor that should be considered by the Court
19 before addressing this Just Compensation Clause question be-
20 cause if the alleged taking of a particular piece of property
21 can be redressed through the providing of compensation, then
22 there's no constitutional violation, because the Just Compen-
23 sation Clause requires only compensation, it doesn't
24 prohibit --

25 QUESTION: Well, let me see if I understand that,

1 Mr. Buscemi. What you're suggesting is that if the Tucker Act
2 in just compensation cases reaches only eminent domain cases,
3 that is where the Government initiates the condemnation, if
4 that's all, then we do have a constitutional question.

5 Whereas if the Tucker Act reaches also so-called inverse con-
6 demnation, whether regulation or whatever it may be, in and
7 of itself, constitutes a taking and provides compensation,
8 then we don't reach the constitutional question?

9 MR. BUSCEMI: That's right. And I think that it's
10 important -- I mean, I think that that just --

11 QUESTION: Is that true also in the other case?

12 MR. BUSCEMI: Yes, it is. I mean, I think that just
13 supports the general notion that these taking questions ought
14 to be addressed in the context of the application of the sta-
15 tute to particular pieces of property rather than in the con-
16 text of the statute as a whole. Because we just don't know
17 how the statute is going to be applied in a particular circum-
18 stance.

19 Now, I do want to say in connection with the taking
20 argument in the Indiana case just a little bit about this
21 high levels of management business that is emphasized by the
22 district court, and also in the briefs of appellees. There's
23 nothing in the statute that talks about high levels of manage-
24 ment so far as restoration of prime farmland to productivity
25 levels obtained at high levels of management. That's something

1 that the district courts have injected into the case by saying
2 that we're going to define high levels of management as those
3 producing yields that are impossible to reach after surface
4 mining, and then concluding that the statute imposes an impos-
5 sible burden.

6 QUESTION: Well, the statute requires a comparison
7 with the ~~same~~ level of management as had heretofore
8 been given.

9 MR. BUSCEMI: That's right. Exactly.

10 QUESTION: And if, in the past, that level had been
11 a high level of management, then there's sense in what the
12 district court said, isn't there?

13 MR. BUSCEMI: That's certainly true, Mr. Justice
14 Stewart. But my point is only that the standard is not
15 high levels of management, as if that is something separate
16 and apart --

17 QUESTION: The equivalent level of management?

18 MR. BUSCEMI: That's exactly right.

19 QUESTION: At the same level of management.

20 MR. BUSCEMI: All it's saying is that --

21 QUESTION: But if the level anterior to the strip
22 mining has been a high level of management, then one must com-
23 pare what a high level of management would produce after the
24 strip mining. Correct?

25 MR. BUSCEMI: That's right. There's the question

1 of reestablishing the yields that would be obtained before
2 the surface mining began.

3 QUESTION: With the same level of management?

4 MR. BUSCEMI: That's right. And I think, by the
5 way, as we mention in our brief on page 34, Note 20, the
6 testimony of one of the plaintiffs in this case was that land
7 can be restored to its levels of productivity after surface
8 mining. This is the same kind of problem that exists
9 in the Virginia case on the taking question. The district
10 court in the Virginia case said that restoration approximating
11 the original contour is physically and economically impossi-
12 ble. Well, that just ignored the finding of Congress to
13 the contrary. And it ignored the evidence in the record to
14 the contrary, it ignored the Pennsylvania and the Ohio
15 experience.

16 Now, finally, in connection with the taking argu-
17 ment, I just want to call the Court's attention to the
18 analogy here to the nuisance cases or the noxious use cases.
19 This is a -- surface mining creates much of the same kind of
20 effect. This is not an economic enterprise that is totally
21 without its disadvantages to the surrounding community.
22 Congress has found that there are many disadvantages. And
23 in that respect it's very much like the brickyard in Hadacheck
24 or the cedar grove in Miller v. Schoene, or the brewery in
25 Mugler. All of these things have their value; there's no

1 question about that. But the Court has found that because of
2 the impact on the surrounding communities there is room for
3 regulation without a taking in the constitutional sense.

4 And I think that those cases are instructive in this context.

5 QUESTION: That goes to the taking argument and not
6 to the Commerce Clause argument?

7 MR. BUSCEMI: Yes, that's right. That's what I
8 was -- I didn't reach that in the Virginia case and I did
9 want to address it briefly.

10 QUESTION: I haven't read Mr. Conlon's letter in
11 full, but when he states that the coal industry is quite
12 capable, do you mean, is he saying it's physically possible
13 or economically feasible or both?

14 MR. BUSCEMI: Mr. Chief Justice, I thought he was
15 saying both, and I could be corrected on that, but we did
16 quote the sentence in his -- on page 110 of the Appendix.

17 QUESTION: Yes, I have that before me. Some parts
18 of it have an ambiguity in it.

19 MR. BUSCEMI: Well, I think that the -- you know,
20 that letter is instructive for another reason as well, because
21 it focuses on the debate that was in Congress with respect to
22 the prime farmlands. When Congress considered this, there
23 was a recommendation from the Administration that surface
24 mining be banned, or at least that a moratorium be declared
25 on surface mining on prime farmlands. And Congress decided

1 not to do that. And the reason it decided not to do it was
2 because its investigation indicated that the land could be
3 properly restored after surface mining was completed. And
4 that's why Congress chose to act in the way it did, rather
5 than the way that the Administration had requested. And I
6 think Mr. Conlon's letter is addressed to the moratorium
7 possibility.

8 QUESTION: As to the specific illustration he's
9 giving, it apparently -- he regards it as economically feasi-
10 ble. But I wondered -- you seem to be relying on that
11 as a general proposition.

12 MR. BUSCEMI: Well, but let me put it this way,
13 Mr. Chief Justice. Certainly the Congress thought that it was
14 feasible. And I don't believe that we have any indication
15 here that with respect to any particular piece of property
16 it is not feasible. I mean, there hasn't been -- to some
17 extent this statute may be a technology-forcing statute. We
18 don't yet know. It may be that thus far surface mined prime
19 farmland has not been restored. But Congress at least thought
20 that it could be restored to the equivalent levels of yield
21 and thus far that has not been shown to be incorrect with
22 respect to any particular piece of land.

23 QUESTION: Mr. Buscemi, could you help me on your
24 argument that the taking issue is raised prematurely and
25 we'd be better off to wait till a specific case arose involving a

1 specific parcel. I have some difficulty in thinking of a
2 hypothetical case in which the issue might arise, because you
3 surely couldn't sue in the Court of Claims under the Tucker
4 Act till the property had been taken. I don't suppose any
5 taking would occur if somebody just didn't use his farm.
6 How does the -- at what point would a taking in a specific
7 future case -- you say we should wait for a future case.

8 Tell me how you think it could arise and what would be taken?

9 MR. BUSCEMI: Well, Mr. Justice Stevens, I think
10 that perhaps the word premature implies a timing element
11 that's not the sole content of the argument. What we're
12 saying really is that if a particular mine operator has inves-
13 tigated the prospects for surface mining on his property and
14 has also investigated whatever variance procedures may be
15 available -- now if they're not, if they're not available --

16 QUESTION: Well, they're not, here.

17 MR. BUSCEMI: -- on the prime farms -- I'm talking
18 of the Virginia case -- and if he's further investigated the
19 possibility of restoring the land and he's concluded on the
20 basis of all of that information that it is either impossible
21 or impractical, and moreover he's concluded that there are
22 no other beneficial uses of this land, then it may be appro-
23 priate for him to come and say that, well, my property has
24 been taken. But --

25 QUESTION: It seems to me all prospective operators

1 would be in the same boat. They all have to restore the
2 land to agricultural condition.

3 MR. BUSCEMI: Well, but I think the application of
4 the statute may well vary from place to place. It may be --

5 QUESTION: Well, the only variance I think of is
6 where the postmining use might be, say, an airport, where
7 you wouldn't want to farm on it. But why couldn't he just
8 build the airport ahead of time? Then we get back to the --
9 I don't see the hypothetical case of the taking, frankly.

10 MR. BUSCEMI: Well, I think, Mr. Justice Stevens,
11 that one of the critical inquiries that the Court engages in
12 when it looks to see whether there has been a taking is to
13 look at the other uses for the property. And that's why we're
14 talking merely about the focus on a particular piece of pro-
15 perty rather than on the mere enactment --

16 QUESTION: But is it not true that by hypothesis
17 every parcel we're talking about would be one that is being
18 used for farming immediately before the mining occurred?

19 MR. BUSCEMI: Well, at least that historically has
20 had this intensive agricultural cultivation. Whether in the
21 immediate year or two before mining, I'm not sure that that's
22 necessarily the case.

23 QUESTION: I see.

24 MR. BUSCEMI: Regardless of of what it's being used
25 for at the time, there may be other beneficial uses that are

1 available for that land. I mean, the Court said in Andrus
2 v. Allard that you have to look at the entire bundle of
3 property rights, not just to a single strand. But if it
4 turns out that this land is usable not only for farming but
5 also for an airport and also for any number of other things,
6 that may well color the way the Court will look at a taking
7 question focused solely on the operation of the Surface
8 Mining Act.

9 QUESTION: Following up on Justice Stevens' ques-
10 tion, how do you treat a case such as Mahon v. Pennsylvania
11 Coal Company, in which Justice Holmes' opinion says the
12 regulation is unconstitutional because you've crossed the
13 boundary between regulation and taking? And it was an action
14 to have the regulation declared unconstitutional. But there
15 was no particular property involved, it was the statewide
16 regulation of the State of Pennsylvania.

17 MR. BUSCEMI: Well, but, Mr. Justice Rehnquist, I
18 think that that's a very good example of the point that I'm
19 trying to make. There was a particular piece of property in-
20 volved in that case. That was a case that was brought by a
21 particular property owner to prevent the homeowner from taking
22 advantage of the Pennsylvania state law. I don't know what
23 the relief was that was granted in that case, whether it was
24 an across-the-board injunction or whether it was an injunc-
25 tion strictly speaking that ran only to that one piece of land,

1 but in any event the critical point is that the challenge
2 was made in the context of a particular factual situation.
3 And I think that Mr. Justice Holmes' opinion for the Court
4 focused on the private relationship between the coal company
5 and the landowner. The Court was simply unwilling to allow
6 the landowner to rely on this intervening Pennsylvania state
7 law to get out from under the burden of his bargain that he
8 had struck on an arm's length basis. There was no suggestion
9 in Mahon that the Court disagreed with the general principle
10 stated by Mr. Justice Brandeis in his dissent, which I believe
11 was joined by several other Members of the Court.

12 And finally, with respect to Mahon, I'm not at all
13 sure that the -- at least, as to the Section 522(e) of the
14 Act, which is also part of this taking problem, the valid
15 existing rights provision in 522(e) might well have obviated
16 the Mahon problem if it were to arise under the Act in con-
17 nection with one of the prohibitions in 522(e). Now, that's
18 not true, of course, with respect to the prime farmlands,
19 because that's not subject to valid existing rights. But I
20 just do want to make that point.

21 Finally, I do want to address just briefly the
22 Due Process Clause challenges here. There are two of them.
23 The first one deals with the summary cessation order procedure
24 under 521(a)(2). Now, again, we begin with the same kind of
25 argument. No one in Indiana and perhaps one of the plaintiffs

1 in the Virginia case -- but that was not in the record at
2 trial -- but as far as we know from the record, certainly,
3 none of these people have ever been subjected to summary ces-
4 sation orders, or to the imposition of civil penalties. And
5 we think that under those circumstances the due process
6 challenge is premature and that I mean in a real timing sense,
7 rather that as far as focusing on a particular case. We just
8 haven't had these things apply to these plaintiffs yet.

9 In any event, we don't think that either the civil
10 penalty provisions in Section 518 or the summary cessation
11 orders deprive mine operators of due process. The only time
12 that a cessation order will be issued in a summary fashion be-
13 fore there's notice given and an opportunity for abatement
14 is when the inspector determines that there is a violation
15 of the Act or a violation of the permit condition that creates
16 an imminent danger to the health or safety of the public, or
17 is causing or can reasonably be expected to cause significant
18 imminent environmental harm to the land air or water resources.

19 Now, that standard, we suggest, is very similar
20 to standards that this Court has already upheld for summary
21 administrative action. And also other federal courts, such
22 as the Fourth Circuit, in Sink v. Morton, arose under the
23 Mine Safety and Health Act, but involves very similar standing.
24 Now, of course, the district court makes much of the fact
25 that some of these summary cessation orders may have been

1 issued to mine operators other than the plaintiffs erroneously
2 and in the first few months of the statute's effectiveness
3 I gather that there were a small number of erroneous summary
4 cessation orders. In fact, the one that was issued to
5 Paramount Mining Corporation, which is the plaintiff in the
6 Virginia case, was issued erroneously and it was reversed
7 approximately two months later when there was an administra-
8 tive hearing held. And in the interim there is no indication
9 whatever that there was any harm suffered by the company.
10 It was simply a question of whether they could dump spoil in
11 one area rather than another.

12 But, in any event, that's not the relevant inquiry,
13 and I just want to make that point clear. The question is not
14 whether inspectors may have made errors in particular cases,
15 but whether the whole process is deficient. We don't think
16 that it is, because Congress could legitimately decide that
17 when an on-site inspection reveals such an imminent danger to
18 the public or to the environment, something has to be done
19 about it beforehand. And then Congress has tried to protect
20 the rights of the mine operator by allowing him to seek tempo-
21 rary relief from the Secretary and requiring the Secretary
22 to react in five days, in that circumstance.

23 Now, with respect to the civil penalty provisions,
24 there are just a few points to be made. First of all, there
25 are no penalties that are finally imposed until after there

1 has been full administrative review of it.

2 QUESTION: Indirect, though. You have to pay the
3 penalty before you get the review.

4 MR. BUSCEMI: You have to pay the penalty only if
5 you wish to seek review of the amount of penalty.

6 QUESTION: This is the procedural due process issue?

7 MR. BUSCEMI: That is correct.

8 QUESTION: Is there any precedent for that particu-
9 lar procedure?

10 MR. BUSCEMI: Well, I don't know if there's precedent
11 for the particular procedure of paying a civil penalty under,
12 you know, one of these --

13 QUESTION: Before you get here.

14 MR. BUSCEMI: -- but there's certainly a depriva-
15 tion of property before a hearing.

16 QUESTION: Seizing property?

17 MR. BUSCEMI: Yes. And I think this is --

18 QUESTION: Seizing crops, for example.

19 MR. BUSCEMI: This is -- exactly. I think this
20 is analogous to to that.

21 QUESTION: But there's always some reason for an
22 immediate seizure of the property. There's no particular
23 reason for making the defendant pay his fine in advance,
24 is there? Just the security, that you're sure you get
25 the money, but that's not exactly --

1 MR. BUSCEMI: Exactly.

2 QUESTION: A very powerful argument, is it? I mean,
3 you're generally dealing with solvent people here.

4 MR. BUSCEMI: Well, Mr. Justice Stevens, I think
5 that when the Congress had found that under the Mine Safety
6 and Health Act there was a substantial difficulty in col-
7 lecting civil penalties from mine operators, and I think
8 that that's what pushed Congress into enacting the statute.
9 I think that the Secretary in interpreting and applying the
10 statute has found that generally speaking mine operators who
11 are willing to seek administrative review at all are mine
12 operators who are willing to pay the penalties, if adminis-
13 trative review ultimately results in their being found liable.

14 QUESTION: Well, they have to be willing in order
15 to seek administrative review. That is the point.

16 MR. BUSCEMI: Well, I don't think -- see, that's
17 the point, Mr. Justice Stewart, that's not true. They can
18 seek administrative review and obtain a full review of the
19 fact of the violation as the Secretary has been applying the
20 Act without paying any money in. That's the point that I
21 want to make.

22 QUESTION: No, but they lose -- they can't quarrel
23 about the amount.

24 MR. BUSCEMI: Well, that's true, but my point is
25 that the reason the Secretary has permitted this and has not

1 interpreted -- a large part of the reason the Secretary has
2 not insisted on payment under 518, even to obtain review of
3 the fact of the violation, is that the biggest problem that
4 the Secretaries of Interior and Labor have had under these
5 statutes in mine operation was more the process altogether
6 and not mine operators who come in seeking administrative
7 review and then try to refuse to pay. I mean, that is -- by
8 experience that's not been the problem.

9 QUESTION: You didn't fine anybody, though.

10 QUESTION: Is there an analogy to a supersedeas
11 bond in a regular trial court civil damages action where
12 you can appeal, but you have to post a bond in order to
13 prevent a levy on your property if you have lost as a defen-
14 dant?

15 MR. BUSCEMI: Well, I think that is analogous,
16 Mr. Justice Rehnquist. Here we have an interest-bearing
17 account. It's not as though the use of the money is being --

18 QUESTION: So it would be analogous if you had to
19 post a bond before you could file your answer. In other
20 words, you've got to --

21 MR. BUSCEMI: It's not as if they're losing the
22 use of the money during that time.

23 QUESTION: But you haven't had the -- as Justice
24 Stevens suggests, you haven't had the full hearing and then
25 tried to appeal.

1 MR. BUSCEMI: Well, that's true; that's true.
2 I reserve the remainder of my time for rebuttal.

3 MR. CHIEF JUSTICE BURGER: Mr. Kelly.

4 ORAL ARGUMENT OF G. DANIEL KELLY, JR., ESQ.,
5 ON BEHALF OF THE APPELLEES

6 QUESTION: Mr. Kelly, at some convenient point in
7 your argument will you address the question of what remedies
8 if any individual landowners would have, assuming the
9 Government wins this case? And assuming also an individual
10 landowner can prove that all beneficial use of his property
11 has been denied him by the enforcement of this statute?
12 You address it at your convenience. I just don't want it
13 overlooked.

14 MR. KELLY: Mr. Justice Powell, I will do that at
15 the end.

16 Chief Justice Burger, and may it please the Court:

17 I believe the Government has articulated the main
18 difference between the Indiana case and the Virginia case,
19 and that is that we encompass some 21 different or additional
20 subsections of the statute, and before getting into the Tenth
21 Amendment issue or the federalism issue I would like to go
22 into some further explanation of the various sections of the
23 statute that are involved under the Tenth Amendment as well
24 as the Commerce Clause.

25 We have divided those into four basic groups,

1 and the first group would be the prime farmland provisions.
2 And I don't think at this point that there is any doubt about
3 the effect of the prime farmland provisions.

4 The effects of the prime farmland provisions,
5 quite simply, are that at the conclusion of taking the coal
6 out of the ground you've got to put everything back in, in
7 three separate layers, and that land has to be farmed, mini-
8 mally, for five years. And as the district court in the
9 Star Coal Company case in Ohio found -- or in Iowa found, it
10 may even take 20 years of farming to get that land back to
11 the point of equivalent levels of yield under high levels of
12 management.

13 That term, high levels of management, as an
14 aside here, is found in the Act. "High levels of management"
15 were used by the Secretary. I don't think there's any doubt about
16 where it comes from. But in any event, prime farmland provi-
17 sions were intended by Congress to require a farming use and
18 allowed no other uses, no other variances. It was expressed
19 by at least three Senators on the floor of the Senate at the
20 time it was introduced. As a matter of fact, it was expressed
21 in the terms, we don't want any state bureaucrat to have the
22 discretion to allow some other land use. And that's how it
23 was expressed. And that's how it was put in the Act, and
24 that is the way it's going to be enforced either by the
25 Federal Government or by the states under the threat of the

1 Federal Government.

2 Now, the Government has said that this is the regu-
3 lation of private activity. But it seems to me that the
4 thrust goes far beyond private activity. It goes directly
5 into land use. And I think that under the Tenth Amendment
6 issue, at least, the initial question that must be decided is,
7 what is land use planning and activity insofar as the state
8 is concerned and in relationship to National League of Cities,
9 that's been heretofore decided? And to me, I think National
10 League of Cities was the beginning, at least, of defining
11 what is an area of sovereignty in which the Federal Govern-
12 ment cannot intrude that's going to be held to the states?
13 And it also started to state what it's not going to be.

14 And quite candidly with the Court, I don't think I
15 can say that land use planning is wholly a governmental ser-
16 vice, if you will, but I can certainly say it is not simply
17 the regulation of private activities relating directly to
18 Commerce.

19 QUESTION: National League of Cities depended upon
20 the fact that the subjects of the regulation were themselves
21 states, did it not? Is it the contention of Indiana here
22 that Indiana or its subsidiary municipal corporations own
23 prime farmland?

24 MR. KELLY: Mr. Justice Rehnquist, far be it from
25 me to say precisely what was said in there, but I think there

1 were two things that were important to the Court in NLC.
2 I think the first thing that was important was that there
3 was a direct command speaking to the state. I think the
4 second thing that was important was what it spoke about,
5 and maybe what it spoke about was more important than that it
6 actually did speak to the state. And I think land use
7 planning, if we are to make a comparison to the second
8 tier, if you will, of National League of Cities, I think it's
9 much more akin to that than anything else. I think land use
10 planning and control involves matters that transcend mere
11 economics and commerce. It goes to the very heart of what a
12 community's going to be like. And I think this Court has
13 said it on many different occasions, land use planning is an
14 instrument to create a quality of life and a character within
15 a community.

16 Now, if this power -- of the states, if you will;
17 it's used to do that -- it seems to me is equal to the
18 services that were relied upon, at least in part, in National
19 League of Cities to get the Court to where it got.

20 Now, to carry it one step further, I think within
21 the Tenth Amendment there is room -- and I think it is in the
22 intent, if you will, of the framers -- that the states not
23 only were to be a government to give governmental services.
24 The states -- if a state is going to be a government, it has
25 to have something more than the right to have employees to

1 run police departments and schools and hospitals. A state,
2 I believe, must have some independent sphere of governance.

3 I can't say that that is precisely what National
4 League of Cities said, but I think, if our constitutional
5 framework is to make any sense whatsoever, if the states are
6 to govern, if they're to have some degree of independence,
7 there must be then some independent sphere of government,
8 or governance, if you will.

9 I think the only real question remaining after
10 National League of Cities would be, how is that to be defined,
11 where are we to go with that? And I think that once an area
12 like land use planning comes before the Court and it has the
13 attributes that land use planning does, and that is that it
14 concerns matters that are so peculiar to each given community
15 they can only be determined by looking at a wide diversity of
16 climate, geography, geology, preferences, and character.
17 And when you are required to come to different policies based
18 on these peculiar matters that are so central locally, I think
19 that may well qualify as an independent sphere of governance.

20 I think as Chief Justice Burger's question at the
21 outset, as to what does the Tenth Amendment mean, I think it
22 has to mean that there is some sphere of governance left to
23 the states. And I think part of that has to be land use
24 planning and control. And I think once that issue and ques-
25 tion is resolved, I think the next problem is, where do we

1 go from there? Because we admit, in the State of Indiana,
2 and the coal companies admit, that there is in fact areas,
3 possibly, where land use planning might become tangentially in-
4 volved. We cannot take the position that it is always
5 separate and apart from the power of the Federal Government.

6 And we would propose that if this is a central right,
7 if you will, under the first ten Amendments, that the Court
8 simply go into the weighing and balancing process that it has
9 gone into in making these types of determinations in other
10 Amendment cases.

11 QUESTION: Mr. Kelly, let me push you with a ques-
12 tion on it. Supposing we had the problem of nuclear waste
13 disposal, could the Federal Government regulate the kinds of
14 land in which the nuclear waste may be deposited, and so
15 forth? You can't dump it in a lake, or something like that?

16 MR. KELLY: Well, I would certainly think that to
17 the extent that nuclear waste had a potential for an inter-
18 state spillover effect, from one state to another, that this
19 might be an area where the federal interest might indeed be
20 permanent.

21 QUESTION: Well, supposing Congress found in the
22 coal area that there's an interstate spillover? The facts
23 aren't very persuasive, I realize; you've done a very good job
24 on that. But supposing they had found that they wanted to
25 have a certain amount of minimum land preserved for

1 agricultural uses? And that would have an interstate spill-
2 over because the agricultural market is essentially an inter-
3 state market.

4 MR. KELLY: Well, I think even if there is a com-
5 pelling national interest here, at least under the Fourteenth
6 Amendment cases where you have a suspect class, there is still
7 the next level of inquiry, and that is, is there a less in-
8 trusive means of doing this? In other words, just finding a
9 paramount national interest in the sense of the Fourteenth
10 Amendment cases, as I would understand it, is not sufficient.
11 The Court would then have to focus on the nature and the means
12 that the Federal Government did use.

13 QUESTION: In other words, your land use planning
14 exception, or land use control, is something that the Federal
15 Government can invade only when there is no less intrusive
16 means of doing it? It's that kind of -- rather than an abso-
17 lute line?

18 MR. KELLY: I think so, Mr. Justice; yes. Defi-
19 nitely. I don't think there are any absolute lines, and I
20 think that's why I'm suggesting that the Court may want to
21 go into a Fourteenth Amendment type of analysis. I think it
22 does this in other Commerce Clause situations where the
23 Federal Government has not stepped in with regulations and a
24 state has stepped in and is regulated, in order to determine
25 whether or not that's an undue burden on interstate commerce.

1 The Court looks to the policy that the state is pursuing when
2 it does come into that area, and it balances whether or not
3 the benefits of the state policy are out of proportion or in
4 proportion to the burdens on interstate commerce that are
5 created by it. So I don't think the test that we're suggest-
6 ing is anything that's unfamiliar to this Court in the past,
7 and in fact, I think it's very consistent with it.

8 And insofar as weighing these facts, I would like
9 to go for a minute to the specific facts of the effects on the
10 State of Indiana with regard to the prime farmland provisions.
11 I think -- and I don't think there's any doubt about where
12 they came from -- I think the prime farmland provisions came
13 from land use policies, a land use conflict, if you will, in
14 the State of Illinois. I think you can trace right through
15 the Senate history.

16 And over there the State of Illinois has an abun-
17 dance of underground mineable reserves. Eighty percent of
18 their coal reserves are mineable by the underground method.
19 Indiana to date -- less than one percent of our actual coal
20 is mined by the underground method. We cannot mine coal in
21 Indiana by the underground method. We do not have the con-
22 flict between surface mine and prime farmland that's present
23 in the State of Illinois. And the State of Illinois dealt
24 with this problem. Although Senator Stevenson said he didn't
25 like the state bureaucrat having the discretion to do what

1 they were going to do in Illinois -- that is to say, whether
2 to use this prime farmland or not, Indiana doesn't have that
3 problem. But we have six counties in southern Indiana whose
4 whole way of life is wrapped up with coal mining. It has
5 come to life in the last ten years because of coal mining.

6 We have one county down there, 50 percent of its
7 tax revenues are directly related to surface coal mining.
8 That is related to land use. That is how integral land use
9 is to the character and quality of a community. It stands
10 based upon dictates from far away, people, Senators, who have
11 no idea what's going on in southern Indiana. They would no
12 more recognize a high wall in a four-foot seam of coal than
13 contour mining, and they really wouldn't know what it's all
14 about. But they do in southern Indiana, they deal with the
15 problem.

16 In fact, prior to the 1977 surface mining, our two-
17 way water quality study showed that surface mining in the
18 State of Indiana was not -- and I repeat, not contributing to
19 the interstate spillover.

20 QUESTION: Well, in past years there's been a good
21 deal of surface mining in the State of Illinois.

22 MR. KELLY: There certainly has, Your Honor. There
23 has, but insofar as surface mining in Illinois is concerned,
24 only about 50 percent of their coal is produced by surface
25 mining. Fifty percent is produced by underground mining.

1 QUESTION: Well, of course, statistically that
2 doesn't mean anything. They may have a lot more coal than
3 Indiana has.

4 MR. KELLY: I use that for the split, Your Honor,
5 in terms of the fact that 50 percent of their present produc-
6 tion is mined by underground coal, the underground method.
7 In Indiana less than one percent is mined by the underground
8 method.

9 QUESTION: And I say those statistics don't really
10 mean very much unless they're taken in the context of the
11 total production in each state. Go ahead.

12 MR. KELLY: I think also attention needs to be
13 focused upon Section 522 and the attempt by the Federal
14 Government to force the states to zone land as unsuitable for
15 surface mining. I have a very, very difficult time conceiving
16 of any relationship whatsoever of the zoning of land as being
17 unsuitable for surface mining and its connection to inter-
18 state commerce. Try as I might, I find it inconceivable that
19 there is any connection whatsoever.

20 Insofar as 522(e) and -(4) are concerned, they
21 don't deal with surface mining of coal. They deal with ~~surface~~
22 surface mining operations. We, the industry, can't even
23 drive a truck, if you will, within 300 feet of a cemetery.
24 Now what is the relationship to interstate commerce? Chief
25 Justice Burger asked about life. Counsel went to Darby.

1 But the justification in Darby was not the life. It had to
2 do with the unfair method of competition that the Court found.
3 It found a justifiable effect on interstate commerce to
4 protect tangentially the life.

5 There is no tangential or even indirect effect on
6 commerce that's protected by anything within Section 522.
7 And insofar as the approximate original contour provision
8 is concerned, with respect to the Commerce Clause, we cannot
9 find, I could not find, the district court could not find
10 anything within the entire history of this Act before the
11 Senate that would relate approximate original contour to any
12 adverse effect on interstate commerce, even if we went to
13 water pollution.

14 All of the justification, all of the justification
15 mentioned by the Senate, the House, went to water pollution
16 on steep slopes and mountain tops. It didn't have a thing to
17 do with water pollution on flat land. And in Indiana we have
18 areas that are not flat but they aren't steep slope. And be-
19 cause of the approximate original contour, insofar as land
20 use is concerned, we couldn't go out and build an airport on
21 that after we mined it. Approximate original contour would
22 restrict the land use of that, at least until after revegeta-
23 tion is completed. Either under the Commerce Clause or under
24 the Tenth Amendment, the original contour falls, either way.
25 With respect to the Fifth Amendment -- unless the

1 Court would have any questions at this point on either the
2 Commerce Clause arguments or the Tenth Amendment, I'll pro-
3 ceed to the Fifth.

4 Coming down to the Fifth Amendment, I think the
5 first question I'd like to deal with, and that is the Tucker
6 Act. In the case at bar, it is not at all certain that the
7 Federal Government is going to be the government that is using
8 or regulated by the prime farmland provisions, nor is it cer-
9 tain that they're going to be the regulatory agency under
10 522, so how can it be said that the Tucker Act is going to
11 be an adequate remedy? It may not even be the Federal Govern-
12 ment. It may be the State of Indiana.

13 And insofar as the question of the timeliness of the
14 remedy is concerned, I would suggest to the Court that if the
15 states who I believe and as the Indiana Legislature so found
16 -- which is entitled to some degree of presumption of ration-
17 ality -- it is being coerced into enacting these provisions
18 -- I think this Court would, ought to be concerned with whe-
19 ther this is going to be a taking and the state's going to
20 have to pay for it. How can the states evaluate whether or
21 not they want to enact 522 or the prime farmland provisions
22 when they don't know whether it's going to cost them \$1 or
23 \$50 million?

24 So, I would suggest to the Court that there is
25 strong public policy behind proceedings with a decision of

1 the taking issues, because the states are sitting back --
2 some of them have enacted statutes; they're submitting pro-
3 grams; they need to know. And if it is a taking, and a
4 wrongful taking, they may not want to have those provisions
5 be a part of their program because they may not be able to
6 afford it.

7 Insofar as the high level of management is con-
8 cerned, again --

9 QUESTION: Mr. Kelly, would you help me a little
10 more on the taking issue? What do you contend constitutes a
11 taking? Is it being required to restore the land to its
12 original use, or is it prohibiting mining in cases where you
13 could never restore it to original use?

14 MR. KELLY: Only insofar as prohibiting mining in
15 the Indiana case. We challenged, and the district court found
16 with respect to the prime farmland that it presents an uncon-
17 stitutional taking because of the high level of management
18 potential that we have to meet in restoring, and the fact
19 that we could not get a permit to do that because we couldn't
20 prove we could do it. So therefore we couldn't mine the coal.

21 QUESTION: Does that apply to all of the surface
22 mining, or just the certain parcels of land, or how widespread
23 is this defect in the statute?

24 MR. KELLY: Insofar as surface mining in Indiana is
25 concerned, we have -- and I think it's in Exhibit Three,

1 Mr. Justice Stevens, sets forth the nature of the surface
2 mineable reserves and the extent of the prime farmland.
3 Now, that shows it to be fairly extensive.

4 QUESTION: Is all the darkened part of that exhibit
5 prime farmland?

6 MR. KELLY: All of the dark green is 75 percent
7 prime farmland and the yellow is 25 percent prime farmland.

8 QUESTION: In the balance of the state that's not
9 shaded at all, is there no coal there? There's coal in
10 other parts of the -- ?

11 MR. KELLY: There is no coal.

12 QUESTION: There's no coal.

13 MR. KELLY: And I think that is something that's
14 quite obvious in terms of the lack of the land use concept in
15 Indiana. We have a map in here that shows where the prime
16 farmland is throughout the state, and we also have a map that
17 shows where it is overlying the coal, and I think the illus-
18 tration is quite dramatic in terms of the lack of the conflict
19 between prime farmland. The highest quality and the best
20 prime farmland, anyone from the State of Indiana knows, is
21 up north. And even what the Federal Government has labeled
22 as prime farmland down there, there isn't a farmer in the
23 State of Indiana that would call that prime farmland.

24 Prime farmland up north is \$4,500 an acre. You
25 can't find \$4,500-an-acre prime farmland in southern Indiana.

1 The six counties that account for 80 percent of the production
2 of coal account for four percent of the production of agri-
3 cultural products. There is no conflict down there.

4 But in any event, I've digressed a little bit away
5 from the taking, Mr. Justice Stevens, but I think the ~~primary~~
6 remedies question; and insofar as Mr. Justice Powell has
7 asked, I think I've addressed myself to that insofar as the
8 Tucker Act is concerned. Did that adequately respond to your
9 inquiry at the outset?

10 QUESTION: It may be as adequate as anybody can
11 inform me today, but I really don't understand what op-
12 portunities property owners will have if they can prove
13 later, assuming the Government wins, that they can prove later
14 that they have no beneficial interest left in their property
15 as a result of this Act.

16 MR. KELLY: I think that issue will --

17 QUESTION: Maybe the Solicitor General should ad-
18 dress that in the few minutes remaining to him.

19 MR. KELLY: I think I can only make one statement
20 in that regard, and that is that most coal companies in
21 Indiana own or lease only the coal. They may have surface
22 rights, and in other situations they may have an interest in
23 the coal as well as own the surface rights. Now, if I under-
24 stand the Court's cases to date, ranging from Penn Central
25 to the Mahon case, I don't think the Court has ever decided

1 that a sheer or mere destruction of the coal is not a taking
2 if you still own the surface. And I would think there would
3 be a very serious policy issue insofar as making that deci-
4 sion in this case would be concerned.

5 QUESTION: And I suppose, if a plaintiff claims
6 that his property has been taken by the government without
7 compensation, and if the government is the Federal Government,
8 as it is here, he can under the Tucker Act go into the Court
9 of Claims and make that claim, and claim for compensation for
10 the taking of his property, can't he, at any time?

11 MR. KELLY: Well, Mr. Justice Stewart, if the
12 Federal Government is doing it. But in this case --

13 QUESTION: Well, that becomes an issue in the case.

14 MR. KELLY: It could be. But I -- the Government
15 doesn't want to concede that they have the remedy.

16 QUESTION: Well, certainly, you have a constitutional
17 right to be compensated for property that is taken from you
18 by the Federal Government.

19 MR. KELLY: Well, that's certainly true, Mr. Justice
20 Stewart.

21 QUESTION: And I would think that it wouldn't take
22 too ingenious a lawyer to file such a complaint.

23 MR. KELLY: No, that's true. But I think there is
24 an irreparable harm beyond that. Let us say there isn't a
25 taking, and we go ahead and buy this land. Don't we have

1 irreparable harm because we bought the land, put the invest-
2 ment in, and if an 80 percent reduction of our \$12 million
3 isn't enough to get us to a taking, we certainly have suf-
4 fered irreparable harm. And the Tucker Act isn't going to
5 help us because there wasn't a taking. But we've been irre-
6 parably harmed because we've put our money in and we've lost
7 80 percent of \$12 million, let us say. Isn't that irrepara-
8 ble harm? Isn't that sufficient for a court to go ahead and
9 make a declaratory judgment at this point to save us, the
10 industry, if you will, from losing 80 percent of the cost
11 of what we're going to put our money in? Aren't we entitled
12 to know if it's going to be a taking? Do we have to gamble?

13 QUESTION: I suppose if you presume the statute is
14 constitutional, you shouldn't buy the land unless you think
15 you can make some money mining it, bearing the cost of re-
16 storing it to its original condition. You can make that deci-
17 sion before you spend the \$12 million.

18 MR. KELLY: My only answer to that would be, Your
19 Honor, if nine Members of this Court sometimes don't agree
20 on what is a taking, how can our clients as businessmen really
21 have --

22 QUESTION: But you're complaining if, even if there's
23 no taking, you say it should be unconstitutional, which is a
24 little different argument than that --

25 MR. KELLY: No, I don't think it ought to be

1 unconstitutional, even if there's no taking, Mr. Justice
2 Stevens. I think we're entitled to the remedy of a declara-
3 tory judgment at this point as to whether it is or it isn't,
4 because if it's not a taking and we don't have the right to
5 get our money back, we don't want to put our money into prime
6 farmland, under prime farmland, when we can't mine the coal.

7 QUESTION: Well, supposing that with respect to 90
8 percent of the mineable land in Indiana, it can be restored
9 and maybe five or ten percent cannot be. Is that a reason
10 for holding the whole statute unconstitutional, or for giving
11 a remedy in the five or ten percent of the cases?

12 MR. KELLY: I guess that's -- I guess I would state
13 it at this point that the statute would be unconstitutional
14 because the states at this point need to know that.

15 QUESTION: Well, don't you have to -- before you
16 mine, you want to get, you have to have a permit to open up
17 the mine. You have to demonstrate that you have the capabil-
18 ity of restoring --

19 MR. KELLY: The technological capability, yes,
20 Your Honor.

21 QUESTION: Yes. Suppose that you go in and you
22 say, I want a permit to mine, but I'll demonstrate to you
23 that I have no -- that this, I just can't do it, and if the
24 government denies you a permit, what it's saying to you is
25 that you cannot mine your coal.

1 MR. KELLY: That's true.

2 QUESTION: At least at that point you've been de-
3 prived of your mineral interest, you would say, I guess?

4 MR. KELLY: Right. That's true.

5 QUESTION: Have you done this with any particular
6 piece of property?

7 MR. KELLY: Insofar as the property is concerned,
8 at this point, our clients have not and in all probability
9 that is due to the grandfather clause that is present. The
10 grandfather clause will probably come to an end insofar as --

11 QUESTION: Well, you're doing the mining -- so far
12 you've been able to mine under the grandfather clause?

13 MR. KELLY: That's true, and there's a lot of liti-
14 gation over the extent and the meaning of the grandfather
15 clause, so that there is some type of preexisting property
16 right that is protected, but it's coming to a head very
17 quickly. Thank you, Mr. Chief Justice.

18 ORAL ARGUMENT OF PETER BUSCEMI, ESQ.,

19 ON BEHALF OF THE APPELLANTS -- REBUTTAL

20 QUESTION: Mr. Buscemi, do you agree that the
21 Tucker Act will be available to a private landowner who
22 claims a taking?

23 MR. BUSCEMI: I certainly agree, Mr. Justice Powell,
24 that a private landowner who claims a taking can bring a
25 Tucker Act suit in the Court of Claims. Now, whether the

1 Court of Claims will find that the Tucker Act jurisdiction
2 was intended to permit recovery on the basis of a regulatory
3 statute like this, or as Mr. Justice Rehnquist called earlier,
4 inverse condemnation, I'm not certain. I don't know whether
5 the Tucker Act jurisdiction has ever been invoked in a case
6 like that and has resulted in a monetary recovery.

7 As I say, in the Eastport Shipping case that we've
8 cited, the Court of Claims, I think, expressed some misgiv-
9 ings about that. I don't know what the court would do if
10 it were faced with the question, but I think that Mr. Justice
11 White's question to opposing counsel just now indicates what
12 the Government would see as the way in which this kind of
13 issue can be appropriately resolved, and that is if an indi-
14 vidual mine operator or prospective mine operator or landowner
15 applies for a permit to mine a certain kind of land, and he
16 maintains that he just does not have the capability to restore
17 it to its equivalent levels of yield --

18 QUESTION: Or he does his best to prove to the
19 Government and the Government says, you've failed to prove it,
20 no permit.

21 MR. BUSCEMI: Or he does his best and the Government
22 says he failed.

23 QUESTION: But in deciding this case, should we
24 assume that there may be an opportunity to litigate in the
25 event a private owner thinks his property has been taken?

1 MR. BUSCEMI: I think, Mr. Justice Powell, that you
2 can certainly assume that one of two things available to a
3 private owner, if he can establish that his property has been
4 taken: you can assume either that there is a Court of Claims
5 remedy under the Tucker Act for money damages, or that at
6 least with respect to a particular piece of property, that
7 there is a district court equitable remedy available in the
8 form of an injunction under the statute as applied to that
9 statute, and that's the problem that we encounter in this case.

10 QUESTION: Well, what happens in that case if he
11 doesn't want an injunction, he wants damages?

12 MR. BUSCEMI: Well, I think that right now, at
13 least, we're confronted with plaintiffs who would be very
14 happy with an injunction. That's exactly what they want.

15 QUESTION: Because then they can mine the coal?

16 MR. BUSCEMI: That's right. And that's presumably
17 all that they want. So I think that that's how we would envi-
18 sion the thing working.

19 QUESTION: Do you concede that if there are, say, in
20 95 percent of the cases the statute works fine, but five per-
21 cent of the cases they can prove they couldn't restore the
22 land to the original condition. Do you concede that that
23 would establish a taking?

24 MR. BUSCEMI: Absolutely not. But --

25 QUESTION: But -- so you'd say, they don't have

1 a remedy either?

2 MR. BUSCEMI: Well, I would say that they would not
3 win on the merits, but Mr. Justice Powell's question, I
4 thought, was what do they do and how do they go about it.

5 QUESTION: Why wouldn't they win on the merits, if
6 they could prove that in five percent of the cases it would
7 just be impossible to restore this land. And the court just
8 says, well, we agree with you, but Mr. Buscemi here says that
9 wouldn't be a taking.

10 MR. BUSCEMI: Well, I think that that statement is
11 correct under this Court's decisions. I think that it would
12 not be a taking.

13 QUESTION: And why wouldn't it be?

14 MR. BUSCEMI: Well, because I think that part of
15 Mr. Justice Powell's hypothetical was that no other benefi-
16 cial use would be available. I'm not so sure that that
17 would be the case, if they --

18 QUESTION: Well, then it can go on being used as
19 farmland?

20 MR. BUSCEMI: Well, under those circumstances I
21 would think that the Court would not find a taking.

22 QUESTION: Well, it makes their mineral interest
23 unusable.

24 MR. BUSCEMI: Well, the New York Landmark statute
25 made the thirty-foot house above Grand Central Station

1 unusable too, but the Court sustained that. And I think that
2 that is typical of the Court's approach in these taking
3 questions. It has looked at the entire bundle of of --

4 QUESTION: Well, I take it, then, you would say
5 that if the Federal Government had just passed a law that
6 said, there will be no more strip mining in Indiana -- well,
7 there will be no more strip mining under any prime farmlands
8 no matter what, with just a flat prohibition, the land re-
9 mains quite usable as prime farmland. You would just say
10 that's not a taking?

11 MR. BUSCEMI: I think that that would not be a
12 taking; yes.

13 QUESTION: Even if it's justifiable under
14 the Commerce Clause?

15 MR. BUSCEMI: The Commerce Clause question, as I
16 say, I will give essentially the same answer that I gave you
17 earlier, and that is that Congress would have to find that
18 that was a reasonable measure under the Commerce Clause. But
19 I think that my answer is that under the circumstances, and
20 what we already have seen in the legislative record, that
21 probably would be defended under the Commerce Clause. After
22 all, the very task force report that plaintiffs rely on and
23 the district court relied on has established that 21 million
24 acres of prime farmland is subject to surface mining. And
25 right now, of course, as it turns out, the problem has not

1 gotten to that dimension yet. We only have approximately
2 21-, 22,000 acres a year that are being mined. But I think
3 that the -- I'm sorry, did I say twenty -- ? It's seven
4 million acres, which is an area larger than the State of
5 Delaware. I think that's a substantial figure and I think
6 that Congress could rely on it under the Commerce Clause.

7 QUESTION: But some of these coal companies don't
8 own the farmland as farmland. They just own the minerals
9 under it, and certainly any such legislation as described
10 hypothetically by my brother White would take all of their
11 property, wouldn't it?

12 MR. BUSCEMI: That's true, and that's the situa-
13 tion that was presented to the Court in Pennsylvania Coal
14 v. Mahon. And if the Court had a situation like that and if
15 the Court further found that there was just no other way for
16 the mine operator, prospective mine operator to make use of
17 his property, then a taking might be found there. I'm not --
18 I just don't know.

19 QUESTION: And avoid an injunction issue
20 if there were an adequate remedy at law?

21 MR. BUSCEMI: That would depend on the adequacy of
22 the remedy at law.

23 QUESTION: Well, compensation would be adequate,
24 wouldn't it?

25 MR. BUSCEMI: In that event compensation would be

1 adequate. My hesitation is only because I do not know of any
2 Court of Claims case that has compensated a landowner for
3 federal action of this regulatory nature. If the compensa-
4 tion were available, there would be no equitable relief.

5 QUESTION: Mr. Buscemi, in Virginia, in southwest
6 Virginia where there are only steep hills but no farmland or
7 very little farmland, the district judge in the Virginia case
8 found that in many instances the land had no value whatever
9 under the administration of this Act, so that could conceiv-
10 ably be different from land in another state where an indi-
11 vidual or a company owned both the surface and the mineral
12 rights. He could continue to farm that land.

13 MR. BUSCEMI: That's correct. The Virginia situa-
14 tion --

15 QUESTION: In Virginia you could own a mountainside
16 that had no utility in the world other than to strip mine.

17 MR. BUSCEMI: That's correct. The Virginia situa-
18 tion may well present different geographical characteristics
19 but I should also point out, Mr. Justice Powell, that the
20 district court also found that if some of that land was
21 leveled off into benches, it went up to \$300,000 an acre.
22 So, I mean, there's a little bit of inconsistency there.

23 QUESTION: I've seen a few mountaintops taken off,
24 but not many.

25 MR. BUSCEMI: Thank you.

1 MR. CHIEF JUSTICE BURGER: Thank you, gentlemen.

2 The case is submitted.

3 (Whereupon, at 3:01 o'clock p.m., the case in the
4 above-described matter was submitted.)
