IN THE SUPREME COURT OF THE UNITED STATES

- - - - -x
UNITED STATES, :
Petitioner :
v. : No. 81-1222
GENERIX DRUG CORPORATION ET AL. :

Washington, D.C.
Wednesday, November 3, 1982

The above-entitled matter came on for oral argument
before the Supreme Court of the United States at
1:01 p.m.

APPEARANCES:

JERROLD J. GANZFRIED, ESQ., Office of the Solicitor
General, Department of Justice, Washington, D.C.; on
behalf of Petitioner.

MRS. ROBYN GREENE, ESQ., Miami, Florida; on behalf of
Respondent.

P_R_O_C_E_E_D_I_N_G_S

CHIEF JUSTICE BURGER: Mr. Ganzfried, you may proceed whenever you're ready.

ORAL ARGUMENT OF JERROLD J. GANZFRIED, ESQ.,
ON BEHALF OF THE PETITIONER

MR. WASSERSTROM: Thank you. Mr. Chief Justice and may it please the Court:

This case presents an important question under the federal Food, Drug and Cosmetic Act that will have a profound effect on the public health. The Court of Appeals' decision permits the sale without FDA approval of a large category of prescription medicines known as generic drugs. Such products purport to be interchangeable with preexisting or pioneer drugs for treating serious and life-threatening diseases, but they are not identical to the pioneers and they may in fact be unsafe and ineffective.

By way of background, I should explain that drugs are composed active ingredients, which are intended to have a therapeutic effect on the patient, and inactive ingredients, which are not intended to have a therapeutic effect. The inactive ingredients, however, play an important role. They may comprise 90 to 99 percent of a product and they often have a significant impact on how the active ingredient does its

1 job.

2 For example, the inactive ingredients
3 influence how much active ingredient reaches the
4 bloodstream and how quickly this occurs. So even if two
5 drugs have the same active ingredient, we cannot assume
6 that they will have the same results. The inactive
7 ingredients may slow down or block the action of the
8 active ingredient altogether, so it's as if the patient
9 took no medication at all. For a patient who's taking a
10 drug to control high blood pressure, such as most of the
11 drugs involved in this case were, this means he runs the
12 risk of heart attach or stroke.

13 On the other hand, the inactive ingredients
14 can speed up or increase the effect of the active
15 ingredient, and this is perhaps most apparent in time
16 release drugs, where the result can be a dumping of
17 active ingredients too quickly into the bloodstream,
18 causing toxicity, overdose and other adverse side
19 effects. It's as if in that case the patient has taken
20 two or three or ten times the appropriate dosage.

21 By the same token, different manufacturing
22 methods can also affect how the drug works. If the drug
23 is packed too densely or too loosely into the tablet,
24 the patient may suffer from wholly unintended
25 reactions.

1 These differences are vitally important for
2 generic drugs. These drugs are offered as substitutes
3 for preexisting products whose effects and proper
4 dosages are well known. But unless the generic actually
5 performs the same way the pioneer does, the substitution
6 may be dangerous.

7 Because the generic company does not know the
8 full composition or manufacturing methods of the
9 pioneer, the only way to be assured that the copy and
10 the pioneer will in fact work the same way is by testing
11 one against the other. If they perform in a similar
12 way, they are considered to be bioequivalent and
13 substitution will not affect the patient. But if they
14 do not work the same way, then substitution poses a real
15 danger.

16 In this case, the district court found that
17 the products Respondent sold were not tested and were
18 not generally recognized by experts as safe and
19 effective for their intended uses, and that was all the
20 Government needed to show for Respondents to be
21 enjoined.

22 But the Eleventh Circuit held that these
23 untested drugs could be sold with no scrutiny
24 whatsoever. The court wrongly concluded that the Act's
25 use of the term "drug" refers only to active ingredients

1 and not to the real life drugs that doctors prescribe,
2 pharmacists dispense, and patients ingest, that is drugs
3 as products.

4 As a result, the court has discarded the
5 carefully crafted statutory scheme that assures that all
6 drugs available for consumption by the public are in
7 advance determined by experts to be safe and effective.
8 And this holding creates a mammoth exception that would
9 allow untested prescription drugs to reach the public
10 simply because a manufacturer wants to sell them.

11 QUESTION: May I ask two questions. First,
12 you don't adopt the position of the district court, do
13 you?

14 MR. GANZFRIED: As to what the Government
15 needed to show?

16 QUESTION: Yes.

17 MR. GANZFRIED: No.

18 QUESTION: They were wrong, too?

19 MR. GANZFRIED: That's correct. The district
20 court tried to adopt a middle ground.

21 QUESTION: Your position is, even if there's
22 no evidence of dangerousness, that the statute still
23 applies?

24 MR. GANZFRIED: In essence, that's right.

25 QUESTION: And also, your position, if you

1 read the statute literally, would apply to over the
2 counter drugs, too?

3 MR. GANZFRIED: Our position would apply to
4 over the counter drugs, and the FDA treats over the
5 counter drugs in a manner that's consistent with the
6 statute.

7 QUESTION: Well, but it doesn't require a new
8 drug application every time you put a different coating
9 on a piece of aspirin.

10 MR. GANZFRIED: Well, two things as to over
11 the counter drugs. First of all, none of the drugs
12 involved in this case are over the counter drugs.

13 Second, what the FDA has done in the over the
14 counter drug monograph system is to determine practical
15 working definitions in advance of general recognition.

16 QUESTION: They just don't read the statute
17 literally. They just say they don't really have to
18 enforce it?

19 MR. GANZFRIED: They read it literally, but
20 they understand that in looking at what an expert would
21 need as the requisite evidence of safety for an over the
22 counter drug, which, keep in mind, is not as potent, not
23 as toxic, and has a much wider range in which it can be
24 used effectively before you reach overdose situations.

25 QUESTION: Well, some of them can be pretty

1 dangerous, I think, over the counter drugs; can't they?

2 MR. GANZFRIED: They can be, and in fact the
3 FDA does have regulations relating to inactive
4 ingredients of certain over the counter drugs. The
5 important thing is that in both cases, the prescription
6 and over the counter drugs, the FDA looks at products,
7 and it is the product that must meet the standards, not
8 simply the active ingredient.

9 QUESTION: Mr. Ganzfried, isn't what the FDA
10 does with over the counter drugs, though, somewhat
11 similar to the test that the district court would have
12 employed, where it said if there is no reasonable
13 possibility that the differences between the excipients
14 will make the product less safe and effective than the
15 recognized product, it would be approved?

16 MR. GANZFRIED: Well, I think they --

17 QUESTION: As a practical matter, is that what
18 the FDA --

19 MR. GANZFRIED: I'm trying to think that
20 through. It's possible that the results may be the
21 same, but I think what has happened is very different.
22 First of all, we are dealing in this case with
23 prescription drugs. And although the district court did
24 apply the wrong standard, it did find that the
25 Government had shown that there was a reasonable

1 likelihood that Respondent's drugs were unsafe and
2 ineffective, and that they presented no evidence to
3 rebut that.

4 QUESTION: Right. But I take it both the
5 Government and the Respondents do not support the
6 district court test for the prescription drugs?

7 MR. GANZFRIED: The Government does not. My
8 understanding is that the Respondents do not, either.

9 QUESTION: What is the definitional line
10 between prescription drugs and over the counter drugs?

11 MR. GANZFRIED: The definitional line is that
12 if the finding is made by the Food and Drug
13 Administration that a particular drug product has
14 sufficient risks or side effects attendant to it that it
15 cannot be sold without a doctor's prescription and under
16 a doctor's care, those drugs require prescriptions. For
17 drug products that are ordinarily used for minor and
18 self-limiting illnesses, where there is a very broad
19 range in which a product can be used effectively before
20 you reach any dangerous levels --

21 QUESTION: Do you mean aspirin and bufferin
22 and so forth?

23 MR. GANZFRIED: Those are over the counter
24 drugs.

25 QUESTION: Well, supposing I decided I'm going

1 to go ahead and manufacture something called "Ufferin,"
2 which is just like aspirin only it's buffered a little
3 bit differently than bufferin is. Is there some way I
4 can tell whether I have to apply for a new drug
5 application?

6 MR. GANZFRIED: Well, if it complies with an
7 over the counter drug monograph -- and I'm assuming in
8 that case that you're describing some kind of an
9 analgesic -- you would have to check the over the
10 counter drug monograph which defines in advance what the
11 general expert recognition would be, tells you what
12 active products must be in it, what suitable inactive
13 products must be in it, and what dosages are allowable.
14 And if you satisfy that standard, then it could be
15 marketed as an over the counter drug.

16 Now, my understanding is that at the present
17 time the analgesic monograph has not yet been
18 completed. But that is in the works as part of the
19 overall over the counter drug review system.

20 QUESTION: Does the statute draw a distinction
21 between over the counter drugs and prescription drugs?

22 MR. GANZFRIED: In the definition of drug it
23 does not. In other provisions of the statute it does,
24 where it imposes certain restrictions on drugs that can
25 be sold only by prescription.

1 QUESTION: On some drugs that can be purchased
2 over the counter there is a printed disclaimer or
3 warning, "Not to be used except under the direction of a
4 physician." Now, is that just a case where the
5 manufacturer is being ultracautious, or is that
6 required?

7 MR. GANZFRIED: Well, I don't know about the
8 specific case, but ordinarily in the over the counter
9 drug situation the understanding is that information can
10 be provided to the patient that will be understood by a
11 layman. So that if you do have the sort of package
12 insert that you've described along with an over the
13 counter drug, then presumably it either conforms to what
14 the monograph describes as what the packet insert should
15 be for the over the counter drug or it --

16 QUESTION: But that warning is not something
17 that is required by the FDA, is that right?

18 MR. GANZFRIED: Some warnings are, and some a
19 manufacturer would add, I assume as a matter of prudence
20 in particular cases.

21 I'd like to explain why the decision below
22 should be reversed, by touching on the statutory
23 language and the legislative history, and then turning
24 to the strong public policy arguments that also mandate
25 reversal.

1 The Court of Appeals went astray from the very
2 first step of its analysis by ignoring crucial portions
3 of the definition of the word "drug." Section 321(g)(1)
4 has a four-part definition. If you satisfy any one
5 part, you have a drug.

6 Now let me draw your attention to subsection
7 (B), which defines a drug as "an article intended for
8 use in the diagnosis, cure, mitigation, treatment or
9 prevention of disease."

10 QUESTION: Counsel, Respondents say that the
11 word "article" as used in the definition is a word of
12 art and refers only to items that are the subject of
13 monographs, and would you deal with that in your
14 discussion?

15 MR. GANZFRIED: In a word, it's nonsense. As
16 this Court said in Bacto-Unidisk, the statute is to be
17 read as broadly as its literal language indicates and
18 not narrowly to accord with any particular medical or
19 scientific definition. So in terms of the way this
20 Court has read the statute, that argument is not
21 correct.

22 QUESTION: And what about the legislative
23 history?

24 MR. GANZFRIED: In terms of the legislative
25 history and the use of the word "article" in these

1 formularies that are the reference point, the
2 formularies in fact have monographs of drug products,
3 dosage forms, and finished products. So the argument is
4 not correct.

5 It would also not make any sense --

6 QUESTION: Does it mean something different in
7 the different subsections, in your view?

8 MR. GANZFRIED: No, it doesn't. In any of the
9 subsections, an "article" can refer to an active
10 ingredient, but never to an active ingredient alone. It
11 can refer to active ingredient and the final drug
12 product.

13 QUESTION: In your view who has the burden of
14 proof in determining whether a drug product is a new
15 drug?

16 MR. GANZFRIED: As these cases have come
17 along, the Government has assumed the burden, in an
18 injunction action such as this, of proving that a drug
19 is not generally recognized by experts as safe and
20 effective.

21 QUESTION: Are you willing to adhere to that
22 position?

23 MR. GANZFRIED: Excuse me?

24 QUESTION: Are you willing to adhere to that
25 position, or should the burden be on the manufacturer?

1 MR. GANZFRIED: I think there are good
2 arguments as to why the burden should be on the
3 manufacturer, because the statute puts it on the
4 manufacturer in the first instance by requiring him to
5 get the NDA. But as a matter of history and practice,
6 the Food and Drug Administration has sought to meet that
7 burden in the cases. We're not asking anything
8 different from this Court.

9 QUESTION: I take it the Administration has
10 not been consistent over the years in its position?

11 MR. GANZFRIED: Well, the fact of the matter
12 is that the Food and Drug Administration has been
13 consistent on the critical issue that's involved in this
14 case, and that is whether the FDA has regarded the words
15 "drug" and "new drug" as referring to products. From
16 the very first regulations that the FDA issued under the
17 statute in 1938, it said that differences in inactive
18 ingredients may cause a drug to be a new drug, and that
19 regulation has remained substantially unchanged to the
20 present.

21 Respondents point to certain practices, some
22 of which are no longer in effect --

23 QUESTION: But for 30 years it issued these
24 "no new drug" letters.

25 MR. GANZFRIED: "Not new drug" letters, that's

1 correct.

2 QUESTION: And you think that's consistent
3 with --

4 MR. GANZFRIED: It stopped in 1968.

5 It is consistent in the sense that, first of
6 all, it provided notice to the FDA that a drug was
7 proposed to be marketed, and such notice is not going to
8 take place under the Court of Appeals' decision.

9 Second, it was clear that the FDA, even in
10 issuing these advisory opinions, was looking at products
11 because on occasion it rejected the sale of so-called
12 generic products that were copies of the active
13 ingredients of products already on the market.

14 And third, that practice, which as I said was
15 terminated in 1968 when all the "not new drug" letters
16 were revoked, was in place at a time when the burgeoning
17 generic drug industry was significantly smaller than it
18 is today. Through the 1960's most of the states had
19 anti-substitution laws, so that if a brand name drug was
20 prescribed it had to be dispensed. You could not
21 substitute a generic.

22 Around the end of the 1960's and into the
23 1970's, the states had shifted their position, in large
24 part because the 1962 amendments to the Act that we're
25 concerned with here called for effectiveness to be

1 demonstrated before a drug could be sold. And in
2 reliance on that, in reliance on the fact that the Food
3 and Drug Administration was going to be reviewing in
4 advance products that were going to be on the market,
5 the states have moved to the current regime of drug
6 substitution where generics can be substituted when the
7 brand name has been indicated but the doctor allows
8 substitution.

9 And that points up one of the major problems
10 in this case. Unless the generics are subject to FDA
11 scrutiny, the doctor is not going to know what product
12 his patient is actually getting. He's not going to know
13 how the inactive ingredients may differ, he's not going
14 to know how the manufacturing methods may differ. The
15 patient may end up with results that are altogether
16 different from what the doctor intended. And because
17 the doctor doesn't what drug --

18 QUESTION: Well, if he doesn't know why
19 shouldn't he write his prescription for the pioneer
20 drug?

21 MR. GANZFRIED: The fact of the matter is, he
22 will. And that was what the testimony in this case was,
23 that doctors, as they had experience with generic drugs
24 that simply failed to do what they purported to do and
25 found that when they shifted their patients back to the

1 brand name drugs that the situations were remedied --
2 and that is exactly what is going to happen. The
3 generic drug industry is going, and the demand for
4 generic drugs is, as the amicus briefs indicate, going
5 to evaporate if there can be no assurance for doctors,
6 pharmacists and patients that they're actually getting
7 the drugs that they think they're getting.

8 The other difficulty is that the doctor may
9 never know that there was a problem with the drug, in
10 the case of a progressive disease --

11 QUESTION: Well, isn't it up to him to know?
12 He certainly assumes that risk with a prescription
13 drug.

14 MR. GANZFRIED: He should know, but he often
15 will not know.

16 QUESTION: Well, he can prescribe and on the
17 prescription write "no substitution."

18 MR. GANZFRIED: He can do that.

19 QUESTION: And they often do.

20 MR. GANZFRIED: And they often do, and they
21 are doing it more and more as the problems with generic
22 drugs are becoming more apparent.

23 QUESTION: What is left of the exemption
24 provision if your view prevails? Certainly when the
25 statute was written it appeared as though Congress

1 thought that certain articles that would be drugs, which
2 were widely accepted in the field as being equivalent,
3 would not require the NDA's. And under your view that
4 kind of an exemption would just disappear, would it
5 not?

6 MR. GANZFRIED: No, it wouldn't. It wouldn't
7 for the reasons that this Court described in Hynson. A
8 drug would come on the market, to take one example,
9 subject to an approved NDA, new drug application. At
10 some point after there has been significant experience
11 with that drug and enough published in the literature so
12 that that drug comes to have general recognition, it
13 will no longer be actively regulated as a new drug.

14 And perhaps I should say something here that
15 addresses a problem in the Court of Appeals' opinion. I
16 think there was the assumption in the Court of Appeals
17 that once FDA approves an application the drug is no
18 longer a new drug. In fact, the drug is a new drug and
19 is actively regulated as a new drug, including
20 requirements that the manufacturer report to the FDA
21 subsequent evidence of adverse reactions.

22 Now, once there has been material usage and
23 material time and enough expert recognition to have
24 general recognition of the drug, it will no longer be in
25 a category of new drugs.

1 QUESTION: But it takes what, 13 years to
2 reach that stage?

3 MR. GANZFRIED: No, no, no. I think the 13
4 years figure that you use is something that Respondents
5 argue as the time it takes from the first concoction of
6 a drug in the laboratory up through the time that you
7 get approval from the Food and Drug Administration.
8 That's not the time period that would be involved for
9 generic drugs, because the FDA has implemented
10 procedures to expedite and simplify the process of
11 getting approval.

12 In fact, there have been recent regulations by
13 the FDA in the Federal Register of October 11th, and the
14 Food and Drug Administration is making great progress
15 towards simplifying the process so that it will be a
16 much quicker one. As I recall, the evidence in terms of
17 those regulations is that it may take approximately two
18 years for an application to be approved from the time it
19 is submitted and filed with the FDA to the time that it
20 is approved. But the active regulation as a new drug
21 would continue thereafter.

22 Now, the portion of the statutory definition
23 of the word "drug" that I referred to, subsection (B),
24 is something that the Court of Appeals ignored
25 altogether, and its finding that only the active

1 ingredients are covered finds no support in the
2 statutory language.

3 The Court of Appeals' error is even clearer
4 when viewed in the full context of the Act. Congress
5 passed this Act in 1938 in the wake of the Elixir
6 Sulfanilamide tragedy, in which more than 100 people
7 were killed by an unsafe inactive ingredient in a drug
8 that had the same active ingredient as another product
9 that had been used safely for years. The Act was passed
10 to ensure that such incidents never be repeated.

11 The Congress went about this task with great
12 care. It established a statutory scheme that we've
13 discussed in some detail already. Under this scheme all
14 drugs would be subject to expert scrutiny before they
15 could be sold. And the cornerstone of this legislation
16 is the NDA process.

17 Now, I should add that in the statute Congress
18 specifically identified the information that was to be
19 supplied in an NDA, and that included, in addition to
20 evidence of testing to establish a drug's safety, all
21 the ingredients in the drug must be listed and the
22 precise methods of manufacture supplied. So it's clear
23 that from the very start Congress expressed its concern
24 for inactive ingredients and manufacturing methods, as
25 well it should have after the Elixir Sulfanilamide

1 situation.

2 Now, Congress amended the Act in 1962
3 following the Thalidomide tragedy in Europe. At that
4 time it expressed its approval of FDA's efforts in
5 keeping Thalidomide off the market, and it expanded the
6 Act's protection of the public by adding the standard of
7 drug effectiveness, so that now a manufacturer must
8 demonstrate by substantial evidence that its product is
9 both safe and effective for its intended use before it
10 can be sold. And there was no indication in 1962, or
11 1938 for that matter, of any Congressional intent to
12 weaken FDA's power to keep unapproved drugs off the
13 market.

14 Aside from the preclearance program, the Act
15 also provides other means for ensuring that drugs, once
16 on the market, perform as they are supposed to. While
17 these misbranding and adulteration provisions are
18 important enforcement tools, they address only products
19 already being sold and are not a substitute for
20 premarket review, nor were they intended to be such a
21 substitute, as again the Elixir Sulfanilamide history
22 shows.

23 That drug was in fact seized as misbranded,
24 but the experience led Congress to conclude that such
25 after the fact remedies alone were not enough.

1 Now, in totally exempting the generic drugs
2 from the NDA process the Court of Appeals said that they
3 may be sold even though they're not tested, as was the
4 case with the drugs in this case. And under the
5 decision below, because there will not be an approved
6 NDA for these products, they are also exempt from other
7 safeguards.

8 Among these is the requirement I mentioned
9 before, that the NDA holder report subsequent evidence
10 of adverse reactions under Section 355(j). When
11 circumstances warrant, the agency may withdraw its
12 approval and in that event the drug may no longer be
13 sold.

14 This exemption that the Court of Appeals
15 created was unintended by Congress, and in reaching the
16 conclusion it did the Court of Appeals acted in a manner
17 that was contrary to the way this Court has consistently
18 interpreted the Act. Dotterweich, Bacto-Unidisk,
19 Rutherford, Hynson, and the Park case in 1975 teach us
20 that the Act is to be read broadly and its exceptions
21 narrowly, in order to give full effect to Congress'
22 effort to protect the public.

23 I mentioned also the FDA experience of 40
24 years, the question I had before as to whether we've
25 changed our mind. We explained in our brief why on the

1 critical issue in this case we haven't changed our
2 mind.

3 If Respondents contention is right that there
4 has been some agency vacillation, what we are doing now
5 is returning to where we were in 1938. We are not
6 coming up with something new. And we are recognizing
7 that the Congressional intent to incorporate ongoing
8 medical and scientific research, which today leaves no
9 doubt and is undisputed that differences in inactive
10 ingredients and manufacturing methods often can cause
11 differences in the way the products react -- taking all
12 of this into consideration, the fact is that we're
13 consistent on the main issue, and if in fact we've
14 changed our mind, then as this Court said in the 1978
15 NLRB versus Iron Workers case, the agency is certainly
16 entitled to change its mind and its interpretation
17 should still stand so long as it's a defensible
18 interpretation of the statute, as this one certainly
19 is.

20 QUESTION: May I ask one other question. What
21 is the FDA's position with respect to a pioneer drug
22 that changes an inactive ingredient? Say they change
23 from the pill from green to blue or something.

24 MR. GANZFRIED: An approved pioneer drug --

25 QUESTION: Must it file an NDA?

1 MR. GANZFRIED: It must file. It could be a
2 supplement, depending on how drastic the change might
3 be. It could be a supplement, it could be an
4 amendment.

5 QUESTION: Say they just change the coating on
6 it.

7 MR. GANZFRIED: But the fact is that the
8 manufacturer is making a change in the product that's
9 been approved.

10 QUESTION: And he must file a new drug
11 application?

12 MR. GANZFRIED: Or an amendment or a
13 supplement.

14 QUESTION: Well, it wouldn't be an amendment.
15 It would be a new drug if you change it from blue to
16 green.

17 MR. GANZFRIED: It could be.

18 QUESTION: Well, it could be or would be,
19 under your view?

20 MR. GANZFRIED: If you change the inactive
21 ingredient --

22 QUESTION: Yes.

23 MR. GANZFRIED: -- he has a new drug.

24 QUESTION: And so he would be required, the
25 pioneer drug company, would be required to file an NDA?

1 MR. GANZFRIED: It could be an ANDA or one of
2 the other.

3 QUESTION: But at least he has to --

4 MR. GANZFRIED: He would have to file
5 something to notify the FDA, because he's no longer
6 manufacturing the product that had been approved.

7 QUESTION: No matter how minor the change in
8 the inactive ingredient might be?

9 MR. GANZFRIED: That's correct.

10 QUESTION: Counsel, if the generic is a
11 bioequivalent of an approved pioneer, is the situation
12 any different?

13 QUESTION: The legal situation is not, but
14 that is something for the FDA to determine after there
15 have been tests and a submission made. It is not
16 something that the manufacturers are in a position to
17 determine absent conducting bioequivalence tests. And
18 all we're saying is that if they -- basically what we're
19 saying in this case is that they should be -- we're
20 asking them to do what they hold themselves out as
21 doing.

22 If in fact the drugs are bioequivalent,
23 they're going to be approved and they're going to be on
24 the market. But if they're not, then that's where the
25 problem exists, and those are the drugs that Congress

1 intended should not be on the market. FDA is the only
2 agency Congress created for this purpose and is the only
3 central clearing house for this information that can
4 possibly make those conclusions.

5 QUESTION: It's the only agency Congress has
6 created, but are there not some state agencies that on
7 occasion are even more careful in their administration
8 than the FDA? I'm thinking of over the counter drugs.
9 In some states, some that are not bothered by the FDA
10 are prohibited by state law.

11 MR. GANZFRIED: If I can eliminate the word
12 "careful" from the question, there certainly are state
13 regulatory authorities and in some cases they may have
14 limitations that FDA does not. But the fact is that the
15 states do not have any premarket clearance system.

16 QUESTION: After all, though, aspirin is not
17 harmless.

18 MR. GANZFRIED: When used properly, it should
19 not be. That's the problem. None of these drugs are
20 harmless. They have to be used properly and their
21 effects have to be known, and they have to be known in
22 advance.

23 I'd like to reserve my remaining time for
24 rebuttal.

25 CHIEF JUSTICE BURGER: You may lower the

1 lactern if you'd like, Mrs. Greene. You had a tall
2 predecessor.

3 Mrs. Greene.

4 ORAL ARGUMENT OF ROBYN GREENE, ESQ.

5 ON BEHALF OF RESPONDENTS

6 MRS. GREENE: Mr. Chief Justice, may it please
7 the Court:

8 This case does not involve the issue of
9 whether premarket approval of generic products would
10 make those products safer. The issue is whether generic
11 drug products, both prescription and nonprescription,
12 which contain active ingredients which are generally
13 recognized as safe and effective are new drugs requiring
14 premarket clearance from the FDA before they're sold.

15 The issue of prescription-nonprescription
16 drugs is very important here, and it wasn't until this
17 case got into this Court that the Government suddenly
18 took the position that only prescription drugs were
19 involved. In the complaint which was filed against my
20 client, the Government sought to enjoin the distribution
21 of all unapproved drugs. When the case was argued in
22 front of the Court of Appeals, the issue of over the
23 counter drugs was raised and discussed before the
24 court.

25 It was only when the Government filed its

1 petition in this case that it suddenly claimed that the
2 issue was only prescription drugs, and it was joined by
3 amicus curiae, The Proprietary Association, which
4 represents the various groups which make over the
5 counter products.

6 The Government's reason for trying to narrow
7 this case is obvious. As this Court has recognized in
8 its prior decisions, there are in excess of half a
9 million over the counter products currently on the
10 market. It is simply impossible for the FDA to approve
11 new drug applications for every over the counter drug,
12 and in fact FDA does not require over the counter
13 products to have new drug approvals, although the
14 statute in question does not distinguish between over
15 the counter and prescription drugs.

16 In this case both the language of the statute
17 and the very, very clear legislative history show
18 conclusively that Congress has never intended that each
19 and every prescription and nonprescription drug product
20 obtain premarket approval from the FDA before it is
21 sold. Congress has rejected licensing of products on at
22 least three separate occasions, beginning in the
23 1930's.

24 The original Food and Drug Act was passed in
25 1906 and during the early 1930's Congress began to

1 re-examine it. Very few of the early drafts of bills
2 before Congress contained any language about premarket
3 clearance. However, there was one such bill and that
4 was submitted by Representative Coffee, who seemed to be
5 kind of a Ralph Nader of his time. He was a very
6 liberal man.

7 His bill was called the Consumer Union Bill.
8 He believed it was in the interest of consumers to have
9 product by product licensing. And his bill specifically
10 provided -- he used very specific language -- each
11 product must get a license. Congress didn't want to
12 hear from Representative Coffee at that time and his
13 bill died.

14 The Elixir Sulfanilamide incident occurred,
15 and at that point there was a great hue and cry to have
16 some form of premarket clearance. The Government has
17 argued in this case that simply because premarket
18 clearance came after the Elixir Sulfanilamide incident,
19 that therefore the premarket clearance that was passed
20 must have been product by product licensing.

21 It's a non sequitur and it's simply belied by
22 the legislative history, which we cited extensively in
23 our brief. Representative Coffee and other people got
24 up repeatedly in the legislative history and said, the
25 bill that we have before us that is going to be passed

1 is not a product licensing provision, we are rejecting
2 product licensing. And it's just clear that the type of
3 bill that Representative Coffee wanted, product by
4 product licensing, was decisively rejected by Congress.

5 The Government has claimed that we have cited
6 snippets of the legislative history in our brief. We
7 have devoted at least five full pages to going through
8 portions of the Congressional Record, and it is much
9 more than a snippet that we rely on.

10 The second time the issue came up in front of
11 Congress was in the 1960's. In the 1960's Senator
12 Kefauver wanted product by product licensing. He
13 submitted a bill which provided "that there would be
14 licenses for the maintenance of establishments for the
15 propagation or manufacture or preparation of products
16 described in subsection (a) of this section." And the
17 products for which a license is desired must meet
18 standards designed to ensure the continued chemical
19 structure, strength, quality, purity, safety and
20 efficacy of such products.

21 Senator Kefauver presented this bill to
22 Congress and it eventually passed, but in a much
23 modified form. The factory licensing provisions which
24 were contained in the bill originally remained. The
25 product licensing provisions were taken out. And this

1 was in the 1960's.

2 Now, the Court I think is correct in saying
3 that the FDA's position has been anything but
4 consistent. For at least 30 years it said that what my
5 client was doing, namely selling unapproved generics,
6 which they are not doing any more, as we have pointed
7 out in our suggestion of mootness -- they took the
8 position that it was perfectly proper. And when the FDA
9 last came to this Court in a case involving a similar
10 issue involving generic drugs in the 1970's, it argued
11 before this Court that when it withdrew an approval, a
12 new drug approval for a pioneer drug, that that would
13 automatically require that all unapproved generic drugs
14 be removed from the market.

15 In the 1970's, this Court recognized in the
16 Hynson decision and other decisions that all of the
17 generics it was talking about had never received
18 approval from the FDA. It's stated in the opinions.

19 The Government never argued that these
20 products were not legally on the market because they did
21 not have new drug approvals. Instead, it argued that
22 the withdrawal of the new drug approval for the pioneer
23 automatically resulted in a determination that the
24 generics could not be sold.

25 So the FDA's position that it has been

1 consistent is simply incorrect, and the FDA's actual
2 change in position came about some time in the
3 mid-70's. After the FDA had changed its position
4 approximately in the mid-1970's, the Third Circuit
5 decided the first of the cases which involves the issue
6 here, the Lannett case.

7 QUESTION: Mrs. Greene, was the FDA's change
8 of position which you described as having taken place in
9 the mid-70's evidenced by any decision or statement, or
10 was it simply something that those in the industry could
11 tell was happening?

12 MRS. GREENE: Well, I think the Government is
13 correct in saying that they always had the regulation on
14 the book, but I think it reflected more in the agency's
15 practice than in anything that was said or done. They
16 started to file injunction actions and sue people trying
17 to get the generics off the market.

18 QUESTION: Whereas previous to 1975 they had
19 never done that?

20 MRS. GREENE: Not to the best of my knowledge,
21 not in a reported decision. Maybe a little bit earlier,
22 there may have been several cases that may not have
23 reached the appellate court level earlier to that, but
24 I'm not aware of earlier decisions involving the generic
25 issue.

1 QUESTION: But apart from the time, the year,
2 you say that there was a noticeable and sharp change in
3 policy some time in the late 1960's or 1970's?

4 MRS. GREENE: I think probably the change
5 occurred between 1968 when the FDA stopped issuing the
6 "not new drug" opinion letters and the mid-1970's. The
7 stopping of the issuance of the "not new drug" letters
8 was an official policy that could be pointed to.

9 But the Lannett case is the first case of an
10 appellate court that reflected the FDA's new position in
11 terms of generics. After Lannett was decided, the FDA
12 went to Congress again in the late 1970's and it told
13 Congress, it said, the Third Circuit has decided that
14 generics do not need premarket approval and we think the
15 Lannett decision is wrong.

16 And the FDA at that point put before Congress
17 several bills, among them Senate Bill 1075, which would
18 have legitimized every single thing that FDA was doing.
19 It would have done away with the new drug provisions.
20 It would have adopted an over the counter monograph
21 system. It would have legitimized the abbreviated new
22 drug approval process.

23 QUESTION: Is it possible that Congress didn't
24 act because they thought it wasn't necessary to act?

25 MRS. GREENE: That is a possibility. But I

1 think that the rejection of Senate Bill 1075, viewed
2 together with Congress' specific rejection of premarket
3 licensing in 1938 and 1962, shows that Congress just
4 didn't want premarket licensing. That rejection of the
5 statute alone in 1979 I agree would not be
6 determinative. But I think if it's viewed in the
7 historical context from the thirties through the sixties
8 to the late seventies, it shows a definite pattern on
9 the part of Congress.

10 QUESTION: What do you call the requirement to
11 have a clearance on new drugs? Is that some kind of a
12 premarket licensing system? There are some kind of
13 drugs, I suppose, that need preclearance, don't they?

14 MRS. GREENE: New drugs.

15 QUESTION: Yes. What do you call that?

16 MRS. GREENE: Well, I think that what Congress
17 had in mind when it passed the statute --

18 QUESTION: What is that? Is that a limited
19 premarket, market licensing system, drug licensing
20 system, product licensing system?

21 MRS. GREENE: It is not a product licensing
22 system. What Congress had in mind is that, for example,
23 a manufacturer will develop a brand-new chemical
24 entity. It will go out, it will test it, it will
25 perform investigations.

1 QUESTION: And then --

2 MRS. GREENE: And then it will --

3 QUESTION: Perhaps approve it for marketing.

4 MRS. GREENE: Then it will decide whether the
5 product is a good product to sell, and if it thinks it's
6 effective and safe and useful and the company can make
7 money it will then go to the FDA and it will seek a new
8 drug approval for that particular product.

9 QUESTION: Well, isn't that a kind of
10 licensing?

11 MRS. GREENE: Well, it is not really a
12 license. It is an approval to sell.

13 QUESTION: Well, what was it you think the
14 Congress was rejecting in the legislative history that
15 you referred to?

16 MRS. GREENE: Well, I think what Congress was
17 rejecting was the idea that each and every product had
18 to go for an NDA, because after the product gets on the
19 market in terms of an NDA 99 percent of all products,
20 both in the 1930's and today, are patented. The company
21 which has the original patent is permitted to put the
22 product on the market for a period of 17 years. It may
23 issue licenses to several other manufacturers to
24 distribute that product, but the product stays on the
25 market for 17 years in more or less of a monopoly

1 situation.

2 At the end of 17 years when the patent
3 expires, other companies then are free to come in and
4 duplicate the product. After the 17 years some
5 products, some active ingredients that have been sold,
6 are then generally recognized as safe and effective and
7 can be sold without premarket clearance.

8 Other products, for example a product like
9 Oraflex, which was on the market for a year, even though
10 it had FDA approval certainly no one would recognize it
11 as being particularly safe today, and in fact it has
12 been taken off the market.

13 So the 17-year patent period is a period of
14 time during which the community of experts can formulate
15 opinions about whether the active ingredient that is
16 being sold is generally recognized as safe and
17 effective. And I think that if the statutory scheme is
18 viewed in that way it makes a tremendous amount of
19 sense.

20 The bioavailability and bioequivalence
21 concerns that the Government raises were dealt with by
22 Congress very specifically in the statute that exists
23 through the adulteration requirements. It is -- under
24 the Act as it has existed since the 1930's, a
25 manufacturer is not allowed to sell a product if its

1 strength, quality or purity falls below compendial
2 standards as recognized in the United States
3 Pharmacopoeia or the National Formulary, both of which
4 are expressly mentioned as guidelines in the statute.

5 If one opens the United States Pharmacopoeia
6 and the National Formulary, one finds mainly definitions
7 of drug substances, and the drug substances are listed
8 and underneath it will give the percentage of the active
9 ingredient that should be found in the product that is
10 sold, and there are disintegration requirements.

11 The Formulary and the Pharmacopoeia both in
12 the 1930's and in the 1980's would not tell a
13 neighborhood pharmacist or a manufacturer exactly how to
14 fabricate a product. Rather, they would set standards,
15 tolerances within which the products had to be made in
16 order to comply with compendial standards.

17 QUESTION: Mrs. Greene, your opponent says --
18 I haven't looked, of course, at the original documents
19 -- but says that these compendia do also contain some
20 drug products as well as active ingredients. Is that
21 correct?

22 MRS. GREENE: The compendia do not contain any
23 drug products at all.

24 QUESTION: Not by trade name, but is
25 everything in there limited to active ingredients,

1 according to your submission?

2 MRS. GREENE: What they do contain -- if you
3 go back to the 1935 Pharmacopoeia which Congress had
4 before it, most of the items that are listed in the
5 Pharmacopoeia are drug substances.

6 QUESTION: Well, but "most" seems to imply
7 that there are some that are not.

8 MRS. GREENE: Well, I was getting to that.
9 The second thing that the Pharmacopoeia in the 1930's
10 had, they had items called official preparations. And
11 the Pharmacopoeia was more or less at that point like a
12 cookbook for the neighborhood pharmacist for how he
13 would fabricate --

14 QUESTION: Well, would some of those
15 preparations include inactive ingredients?

16 MRS. GREENE: The recipe that is in the
17 Pharmacopoeia would include inactive ingredients. But
18 at the beginning of the 1935 Pharmacopoeia, in the
19 portion we've cited in our brief, it said that
20 pharmacists could substitute a suitable diluant or
21 excipient for the inactive ingredients which were
22 mentioned in the recipe that was put in the
23 Pharmacopoeia.

24 QUESTION: Is there anything similar to the
25 Pharmacopoeia, any other book similar to that?

1 MRS. GREENE: Well, the two works referred to
2 in the statute are the United States Pharmacopoeia and
3 the National Formulary, both of which are similar.

4 QUESTION: They're two separate?

5 MRS. GREENE: They used to be. In the 1930's
6 they were separate competitors. In the seventies USP
7 bought the National Formulary and changed its function
8 slightly.

9 But in no event is any item listed in the
10 Pharmacopoeia or the National Formulary a drug product.
11 Instead --

12 QUESTION: Well, but you said they did list
13 some recipes that the pharmacist might use, which would
14 include both active and inactive ingredients.

15 MRS. GREENE: With the provision that they
16 could substitute --

17 QUESTION: That you can substitute the
18 equivalent. But the mere fact that they are listed in
19 there seems to me to be contrary to your basic
20 argument.

21 MRS. GREENE: Well, I don't think it's
22 contrary. I think that in terms of the use of the word
23 "articles" in the statute, Congress defined a drug as an
24 article, articles are things listed in the
25 Pharmacopoeia. And for example, the National Formulary,

1 which is mentioned in the statute today, only lists drug
2 substances.

3 Obviously there's a kind of dynamism involved,
4 because the Pharmacopoeia and the Formulary referred to
5 in the statute have changed over a number of years. But
6 the one thing that is definitely not mentioned is drug
7 products, and that's why I think it's important, to the
8 extent that there is an ambiguity in the word
9 "articles," to look at the legislative history in
10 determining exactly what Congress meant when it used the
11 term "articles."

12 QUESTION: Mrs. Greene, in Code Section
13 321(g)(1)(D) it also says that "drug" means "articles
14 intended for use as a component of any article specified
15 in clauses (A), (B) or (C) of the paragraph. Doesn't
16 that indicate that all of these excipients are covered?

17 MRS. GREENE: Well, I think -- but the statute
18 still uses the word "article," and the Government has
19 claimed that "article" should be used in its broad
20 generic sense and not in any way related to its use in
21 the Pharmacopoeia and the Formulary. If in fact
22 "article" means items in the Pharmacopoeia or the
23 Formulary, it should mean the same thing all the way
24 through the statute, and it shouldn't be changed in that
25 part of the statute.

1 There are various items recognized in the
2 Pharmacopoeia which are combinations of active
3 ingredients and are specifically listed as combinations
4 in the Pharmacopoeia.

5 I think that at a minimum the Government has
6 tried to take the position partially that the statute is
7 unambiguous and that this Court should not look at the
8 legislative history. It's our position in our brief
9 that the statute at best is ambiguous and that any
10 ambiguities in terms of the word "articles" should be
11 resolved by reference to the legislative history.

12 I think in resolving the issue of what the
13 word "articles" means, one useful thing that I did, I
14 went through the entire statute and I looked at the word
15 "drug," and every time it said "drug" I substituted
16 "active ingredient" versus "product" in order to
17 determine which interpretation made more sense. 90
18 percent of the time it didn't make any difference at
19 all.

20 But in a couple of situations it did make a
21 very large difference, and if I can just find the one
22 place where it was absolutely most erratic, Section
23 502(i) of the Act says: "A drug or device shall be
24 deemed to be misbranded if it is an imitation of another
25 drug."

1 Now, if we take the word "product," which is
2 what the Government says "drug" means, and substitute it
3 into the Act, that portion of the Act would then mean a
4 product shall be deemed to be misbranded if it is an
5 imitation of another product. Well, of course all
6 generic drugs are imitations of other drugs, and if you
7 use the word "product" in this part of the Act it would
8 effectively outlaw the entire generic drug industry.

9 And by substituting in other parts of the
10 statute it's clear that Congress could not have intended
11 the word "drug" to be "product," but rather it meant the
12 active ingredient or combination of active ingredients
13 in the product. And I think again and again in going
14 through the legislative history, Congress has stated
15 that it is relying on the adulteration provisions and
16 adherence to compendial standards to bring -- I'm
17 sorry.

18 QUESTION: Mrs. Greene, in the section that
19 requires a new drug application to be filed, doesn't it
20 require that they list the inactive ingredients of the
21 drug?

22 MRS. GREENE: Yes, it does.

23 QUESTION: So doesn't that have to be broader
24 than the active ingredients, in that section at least?

25 QUESTION: In that section of the Act. I

1 think when you are dealing with the original pioneer
2 drug that is first going on the market, that the testing
3 and the items that are required are definitely more
4 extensive than what is required after a product has been
5 on the market for 17 years and achieved a certain amount
6 of general recognition. I think before the FDA wants
7 something that is brand new on the market it wants to
8 take every possible precaution to make sure that a
9 disaster will not happen, although even the FDA's
10 efforts do not prevent disasters from happening in all
11 instances.

24

25

1 I think that --

2 QUESTION: Do I detect that you are about
3 through, Mrs. Greene?

4 MRS. GREENE: Just about, but --

5 QUESTION: Well; I have a -- I thought I would
6 just ask you if you thought the Court was quite wrong in
7 rejecting your suggestion of mootness.

8 MRS. GREENE: Yes, I did.

9 QUESTION: And do you think it is even more
10 moot today than before, if that's possible?

11 MRS. GREENE: Well, the government and I are
12 debating on how moot it is, because there was a
13 warehouse full of drugs in Miami, most of which should
14 have been destroyed, but the marshal can't destroy the
15 drugs because he can't burn them, because it would
16 pollute the air, and he can't bury them because it
17 violates the Toxic Waste Disposal Act.

18 (General laughter.)

19 QUESTION: You know that if we had accepted
20 your suggestion, you would have lost your favorable
21 judgment. We would have vacated it.

22 MRS. GREENE: Yes. We pointed that out in
23 our --

24 QUESTION: Exactly. You did.

25 MRS. GREENE: What basically happened, and the

1 government has ascribed all manner of bad motives to us,
2 when this issue came to the public forefront, in the
3 media, there were some very unfavorable reports on
4 national television. As a practical matter, it became
5 almost impossible for someone like my client to sell
6 unapproved generic drug products, and my client was not
7 necessarily interested in the legal issue. My client
8 was interested in his business.

9 So, he just stopped selling unapproved drugs.
10 We told the government we would consent to the entry of
11 an injunction against us to prevent us from selling
12 unapproved drugs, since we weren't doing it any more,
13 and we didn't plan to do it in the future.

14 QUESTION: Are you still of that persuasion?

15 MRS. GREENE: Yes, and really the only
16 difference that the government pointed out, it suggested
17 that we had to recall everything that we had sold in the
18 past. In our suggestion of mootness, we pointed out
19 that under the cases, most of the cases that exist
20 today, the FDA did not have the power to recall.

21 QUESTION: And haven't all the drugs that had
22 been distributed expired in there?

23 MRS. GREENE: We believe that most of them
24 have expired.

25 QUESTION: Most of them.

1 MRS. GREENE: We thought that all of them
2 had. It is possible -- there are a lot involved. The
3 government claims that there are perhaps three bottles
4 in Oklahoma that have not expired. We haven't really
5 resolved that issue, but we still do believe the case is
6 moot, and that any problems along those lines would best
7 be resolved by the trial judge on some type of a remand.

8 In fact, I checked with my client last night.
9 They are not selling unapproved drugs as of today, and
10 do not intend to.

11 QUESTION: Does this mean that the position of
12 your client and perhaps a substantial segment of the
13 industry is that the approval by the government actually
14 enhances the marketability of the generic drug?

15 MRS. GREENE: There is no question about it,
16 and I think that is reflected in the transcript in this
17 case. The government witness, Dr. Palmer, was asked
18 whether certain drugs were generally recognized as safe
19 and effective, and he said they were, and when asked
20 why, he said, because they have FDA approval. He said,
21 whenever anything has FDA approval, I recognize it as
22 being safe and effective. If it is not approved by the
23 FDA, I do not recognize it as being safe and effective.

24 And I think that the government is correct in
25 a way in saying that a lot of doctors do not have

1 intricate knowledge of pharmacology. They look at the
2 FDA approval as a stamp of approval.

3 QUESTION: So your client isn't out of the
4 generic drug business. It is just that your client will
5 present them for approval.

6 MRS. GREENE: Well, my client will not. My
7 client is merely a distributor of products manufactured
8 by other people, and there are a great many
9 manufacturers on the market who make approved products,
10 and in light of the adverse publicity and the difficulty
11 of selling the products, and the potential exposure
12 under products liability laws, there is simply no reason
13 to continue in the practice.

14 Now, the government wanted us to confess
15 error, which we will not do, because we think that the
16 Fifth Circuit was absolutely correct, but what is
17 correct legally and what is correct from a business
18 point of view --

19 QUESTION: Is two different things.

20 MRS. GREENE: Correct.

21 QUESTION: Apart from the particular articles
22 in dispute in this case, your client no longer has a
23 financial interest in winning this case.

24 MRS. GREENE: No. The last remaining vestige
25 of financial interest was --

1 QUESTION: Is your lawyer's fee.

2 (General laughter.)

3 QUESTION: You won't collect that from the
4 government, though.

5 MRS. GREENE: -- were the drugs that were in
6 the warehouse. The injunction case was never
7 consolidated with the seizure case, and we received an
8 order requiring the government to allow us to take the
9 drugs out of the warehouse in Miami, and this Court
10 stayed that order requiring the return of the property,
11 and during the passage of time, at least 90 and probably
12 100 percent of the shelf lives of the products have
13 expired. That was our last remaining financial
14 interest. And we really have none today. But my client
15 said, why do I have to come to this Court, and I said,
16 as long as I am your lawyer, you are not going to not
17 file a brief, you have to come to this Court.

18 We think the Fifth Circuit was absolutely
19 correct from a legal point of view, and the government
20 may be entirely right in saying that the scheme that
21 they have now with the monograph system and the
22 abbreviated new drug applications is an ideal statutory
23 scheme, but unfortunately, it is not the statutory
24 scheme that Congress passed in 1938 and amended in 1962.

25 It is a statutory scheme which Congress

1 expressly rejected in 1979, and as good as it may be,
2 perhaps if I were the legislature, I would have passed
3 Senate Bill 1075. It did get through the Senate, and it
4 was rejected by the House. It is not the statutory
5 scheme that we have today.

6 We think that the Fifth Circuit was right for
7 the reasons stated in our brief, and that its decision
8 should be affirmed.

9 CHIEF JUSTICE BURGER: Do you have anything
10 further, Mr. Ganzfried?

11 ORAL ARGUMENT OF JERROLD J. GANZFRIED, ESQ.,
12 ON BEHALF OF THE PETITIONER - REBUTTAL

13 MR. GANZFRIED: Yes, just briefly.

14 QUESTION: Could you address the distinction,
15 if there is one, under the Act between over the counter
16 and prescription drugs?

17 MR. GANZFRIED: Yes, there is a statutory
18 provision that does provide the distinction. It is 21
19 USC 535(b)(1), that describes the situations in which a
20 drug would have to be sold only under a doctor's
21 prescription. Basically, as I said earlier,
22 prescription drugs are used for --

23 QUESTION: Well, does this case involve only
24 prescription drugs?

25 MR. GANZFRIED: It certainly does. The only

1 drugs that were at issue --

2 QUESTION: Is that the position of the
3 government all through the case?

4 MR. GANZFRIED: That is absolutely correct.
5 The only drugs referred to in the complaint and the
6 request for preliminary injunction were prescription
7 drugs. The only drugs discussed at the hearing on the
8 preliminary injunction were prescription drugs.

9 QUESTION: So you think there is a statutory
10 basis for treating the two categories differently?

11 MR. GANZFRIED: There is a statutory basis for
12 treating them differently.

13 QUESTION: But the definition is the same, is
14 it not?

15 MR. GANZFRIED: The definition is the same,
16 that's correct.

17 QUESTION: In the statute.

18 MR. GANZFRIED: That's correct, but there is
19 this other provision in Section 353 that does set out a
20 basis for recognizing that prescription drugs used for
21 serious and life-threatening diseases are something
22 other than drugs that can be sold over the counter and
23 used by laymen.

24 QUESTION: But just recognizing there is a
25 difference is all. If your position is vindicated as a

1 statutory matter, there would be nothing to prevent the
2 FDA from tomorrow adopting a regulation saying, we are
3 going to require premarket clearancing of all new over
4 the counter drugs.

5 QUESTION: As a matter of fact, I would think
6 that would be -- somebody could easily argue that they
7 would have to.

8 MR. GANZFRIED: Well, if that were the case,
9 and I disagree with it, it would be something that we
10 would have to take up at that time. It is not this
11 case, and it never has been this case.

12 QUESTION: Well, but it might be the
13 consequence of this case, if we read the statute the way
14 you do.

15 MR. GANZFRIED: I don't agree, but if there
16 will be another case, then so be it.

17 QUESTION: May I ask this? Supposing we did
18 conclude that the case was moot on the basis of what has
19 been said, and we vacated the judgment of the court of
20 appeals. What adverse consequence to the government, if
21 any, would follow from that?

22 MR. GANZFRIED: The adverse consequences is
23 that this industry of unapproved generic drugs is in
24 large part a creature of dictum in the Linette
25 decision. It was cited and discussed broadly in the

1 merchandising materials that Respondents put out, and
2 that are in the record in this case. It spawned an
3 industry. It was dictum from which the Third Circuit
4 has arguably withdrawn in its review in the Pharmadyne
5 case.

6 The fact is that without the FDA there to
7 review these drugs before they reach the market, they
8 are going to reach the market. We have the situation,
9 and I refer you to Paragraph 15 of --

10 QUESTION: You can still -- you could just get
11 after somebody else.

12 MR. GANZFRIED: Well, we may not know about
13 them

14 QUESTION: Well, how did you find out about
15 this one?

16 MR. GANZFRIED: Well, one of the reasons we
17 found out is that there had to be a recall of the
18 pherocemyde that was being distributed.

19 QUESTION: Well, how will you ever be? I
20 mean, even if you win, you won't know any more.

21 MR. GANZFRIED: If people -- If there is
22 compliance, we are going to know more --

23 QUESTION: Well, I know, but there won't be if
24 there isn't.

25 MR. GANZFRIED: -- and if there is not

1 compliance, we have a remedy for going after them.

2 QUESTION: If there isn't compliance.

3 MR. GANZFRIED: Well, they referred to the
4 adulteration provisions as a substitute for premarket
5 clearancing. I suggest that if we --

6 QUESTION: I don't blame you for wanting to
7 get off the books a decision you don't want to -- that
8 you think is wrong.

9 MR. GANZFRIED: Well, the holding in the
10 Linette case had nothing to do with the issue in this
11 case. It had to do with a hearing.

12 QUESTION: Well, I know, but you would like to
13 get this particular decision off the books that you
14 think was wrong in this case.

15 MR. GANZFRIED: In this case, that's one of
16 the reasons why the case is not moot.

17 QUESTION: You want it reversed.

18 MR. GANZFRIED: The other reason it is not
19 moot is because they did not agree to a recall. They
20 also did not agree to an injunction as broad as the one
21 that we had sought. Now, the suggestion that we had
22 from them is that the named Respondents would be willing
23 to agree to an injunction. What we asked for was
24 something that would be broader than that, and we
25 indicated in our brief in response to the suggestion of

1 mootness that one of the problems is that they have
2 shrouded the corporate relationships of the company in
3 some mystery.

4 Now, they continue to do so to this date,
5 despite Rule 23.1 of this Court.

6 QUESTION: Perhaps instead of rejecting the
7 suggestion we should have just vacated and remanded it
8 to the lower courts to consider.

9 MR. GANZFRIED: Well, or reversed would have
10 been the preferable course.

11 QUESTION: Not if it's moot.

12 MR. GANZFRIED: Not if it's moot, but they
13 haven't established the strong burden that they have of
14 showing mootness, for the reasons that we described in
15 our brief addressed to that subject.

16 I was going to talk about the adulteration
17 provisions in which they say that's a substitute for
18 premarket review. You could get at these drugs after
19 the fact. I commend to your attention the Secretary of
20 Agriculture's report on elixir selphenilamide in 1937.
21 It demonstrates beyond any doubt that Congress was
22 concerned with the kinds of issues that this case
23 presents. The arguments that they have presented in
24 support of their selling their generic copies of other
25 drugs with the same active ingredient was precisely the

1 defense that was made by the manufacture of elixir
2 selphenilamide. So I commend that Secretary's report to
3 your review.

4 Thank you.

5 CHIEF JUSTICE BURGER: Thank you, counsel.

6 The case is submitted.

7 (Whereupon, at 2:01 o'clock p.m., the case in
8 the above-entitled matter was submitted.)
