3 COMMISSIONER OF INTERNAL REVENUE, :

4 Petitioner, :

5 v. : No. 81-1536

6 JOHN F. TUFTS ET AL :

7 :

8 - - - - -x

9 Washington, D.C.

10 Monday, November 29, 1982

11 The above-entitled matter came on for oral argument

12 before the Supreme Court of the United States at 10:01

13 a.m.

14 APPEARANCES:

15 STUART A. SMITH, ESQ., Office of the Solicitor General,

 Department of Justice, on behalf of the Petitioner.

16 RONALD M. MANKOFF, ESQ., Dallas, Texas; on behalf of the

17 Respondents.

<u>ORAL ARGUMENT OF</u>	<u>PAGE</u>
STUART A. SMITH, ESQ., on behalf of the Petitioner.	3
RONALD M. MANKOFF, ESQ., on behalf of the Respondents.	24
STUART A. SMITH, ESQ., on behalf of the Petitioner -- rebuttal	42

1 meant that none of the borrowers on the note bore any
2 personal liability for the loan but that the lender bank
3 could look only to the security of the property secured
4 by the mortgage.

5 In 1971 and 1972 the partners, of which Mr.
6 Tufts was one, contributed approximately \$40,000 in cash
7 to the general partnership. And they included under the
8 applicable tax rules, which the parties stipulate to be
9 correct, a proportionate share of their \$1.85 million
10 debt in each of their bases of their partnership
11 interests.

12 In 1970 through 1972, when the partners held
13 the project, they claimed approximately \$440,000 of the
14 tax deductions which represented depreciation and other
15 losses in connection with the operation of the apartment
16 project. Those deductions were entirely proper and are
17 not at issue in this case.

18 In August 1972 the partners disposed of the
19 property subject to the mortgage to an unrelated third
20 party. At the time of this disposition there never had
21 been any amortization of the principle balance on the
22 mortgage debt. That mortgage debt remained throughout
23 the entire period of their ownership at \$1.85 million.
24 And at the time of disposition, the basis of the
25 taxpayers' partnership interests had been reduced

1 because of depreciation to \$1.45 million.

2 Now, this transaction came under audit by the
3 Commissioner of Internal Revenue, and he determined that
4 Respondents had realized gain of approximately \$400,000
5 as a result of the disposition of the property. The
6 computation of gain was by reference to the amount
7 realized by the Respondents in this case, the \$1.85
8 million loan, which the unrelated party picked up on the
9 transfer of the property subject to the mortgage minus
10 their bases of \$1.45 million, which yields approximately
11 \$400,000 in gain.

12 This case came to the Tax Court on
13 Respondent's petition for review, and the Tax Court
14 upheld the Commissioner's determination and, in so
15 doing, followed a uniform line of authority above the
16 Tax Court and of the other appellate courts. And in a
17 situation like this, a disposition of property subject
18 to a mortgage requires that when the mortgage has never
19 been amortized down at all, that the amount realized on
20 the disposition of property include the unpaid mortgage
21 balance.

22 The Court of Appeals, however, in this case
23 reversed. It limited the amount realized to the value
24 of the property that happened to be at the time of
25 disposition, which was \$1.4 million. And it did so

1 despite the fact that the property was transfered
2 subject to a debt well in excess of this amount; that
3 is, \$1.85 million.

4 But the value of the property, we submit, has
5 absolutely no significance to the tax consequences of
6 such a transaction. As I shall develop, once the
7 taxpayer's determined to transfer the property along
8 with the debt, the value of the property is only
9 relevant to the new owner and the lender who must look
10 to that value of the property for satisfaction of his
11 loan.

12 QUESTION: Mr. Smith, isn't what the Court of
13 Appeals did quite consistent with the intimation in the
14 Crane footnote?

15 MR. SMITH: No, we don't -- no, Mr. Justice
16 Rehnquist, we don't think it is consistent with the
17 intimation in the Crane footnote, as I shall point out
18 in greater detail. All we think that Crane footnote did
19 was to, by way of dictum, express a reservation that
20 they weren't dealing with the facts of the case that is
21 now before the Court.

22 I don't think that the intimation in that
23 footnote is necessarily tantamount to a rule of law that
24 when the value of the property --

25 QUESTION: No.

1 MR. SMITH: Yes.

2 QUESTION: No, I agree with you, but how much
3 practice and usage among the tax bar and the courts that
4 decide tax cases, more often than we, has grown up in
5 reliance on the idea that what you have described as "a
6 dictum" is at least --

7 MR. SMITH: Absolutely not. The practice and
8 usage is directly to the contrary. I think that it's
9 fair to say that the tax bar, both public and private,
10 has always regarded that footnote, as I shall point out
11 in greater detail, as simply a response to the economic
12 benefit analysis that the court engaged in, in part, in
13 Crane.

14 But we submit, and the Courts of Appeals,
15 apart from the court below as well as the Tax Court, has
16 consistently held both before Crane and since Crane that
17 the fundamental aspect of the Crane principle is the
18 relationship, the functional relationship, between basis
19 and amount realized. And basically, our submission here
20 is that since that basis is cost and it requires -- that
21 implies an economic outlay. And in this particular
22 case, the Respondents borrowed \$1.85 million on a
23 nonrecourse basis.

24 Crane, the principle of Crane allows you to
25 include that loan balance in basis for purposes of

1 depreciation or any other purpose, purposes of computing
2 gain on ultimate disposition.

3 But the quid pro quo of including that in
4 basis is that at the other end of the transaction, that
5 mortgage balance has never been paid, you have to
6 account for it at the other end of the transaction. In
7 other words, the notion is that basis is economic
8 outlay; that is, cost. And while we permit someone to
9 borrow money and count it as basis, if they never pay
10 any of that money, there has to be a reconciliation of
11 the accounts at the other end.

12 The footnote in Crane didn't dispute what we
13 think is the logic of that. And in fact, the Crane
14 decision, the rationale of the Crane decision, we
15 submit; that is, putting, establishing a functional
16 relationship between basis and amount realized requires
17 that there be this reconciliation of accounts at the
18 disposition of property the way it occurred in this case.

19 QUESTION: Why do you think Footnote 37 is
20 there?

21 MR. SMITH: Well, I think footnote -- there
22 has been a lot of ink spilled on this, Mr. Justice
23 Blackmun, and I could only perhaps summarize it, you
24 know, in a few sentences. I suspect that the reason
25 Footnote 37 is there, I mean I think what happened in

1 Crane is that the court engaged, in part, in what the
2 commentaries refer to as an "economic benefit
3 analysis." And they, one of the things that the Chief
4 Justice wrote was that, well, that Mrs. Crane got some
5 kind of economic benefit. And in so doing that, what
6 the court, in order to arrive at that result, the court
7 had to equate her nonrecourse mortgage with some sort of
8 recourse liability.

9 And it was able to do this because she
10 conceded in the case that if the amount had been
11 recourse, if the liability had been recourse, of course
12 she would have been required to take it into account.
13 But she strenuously urged that the nonrecourse aspect of
14 the debt made the case different.

15 Well, what the court said was, well, that
16 wasn't really true in this particular case because the
17 value of the property exceeded the mortgage balance. So
18 in a situation like that, the court equated recourse and
19 nonrecourse debt. And then because of this aspect of
20 the analysis, the court wanted to indicate that perhaps
21 that wouldn't be the case, that aspect of the analysis
22 wouldn't apply if the numbers were reversed.

23 But I think that everyone since that time has
24 indicated that the economic benefit analysis of Crane is
25 really not the heart of Crane, and it's not -- the Crane

1 principle stands on the logical bedrock of a
2 relationship between basis and amount realized, and that
3 if the code permits you to be deemed to have made an
4 economic outlay and you get basis for this outlay even
5 though you borrowed funds and you haven't actually put a
6 dime out of your pocket, but implicit in that notion is
7 that you will ultimately pay some money and if you don't
8 ultimately pay some money the way Respondents did in
9 this case, well, then -- then there has to be a
10 reconciliation.

11 And in fact, in thinking about this case, it
12 seemed to me, if you sort of strip it of all its
13 essentials, what it really boils down to is suppose one
14 were to buy a suit from a department store and charge
15 it, the \$200, and then you wear it a couple of times --

16 QUESTION: Now, you are at the level we
17 understand.

18 (Laughter.)

19 MR. SMITH: And it doesn't fit you anymore;
20 perhaps the excesses of the holiday season. But you
21 have a brother-in-law who's actually much slimmer and he
22 likes the suit. And you say, well, I haven't paid the
23 bill yet, and he says, give me the bill and I'll pay it
24 and I'll take the suit off your hands.

25 At that time the suit is worth \$100 because

1 it's not a new suit anymore. Well, under the Court of
2 Appeals rationale, which limits amount realized to
3 value, you would have \$100 loss, putting aside the
4 question as to whether you could deduct --

5 QUESTION: That isn't quite fair, because he
6 owed the bill for the suit.

7 MR. SMITH: Sure. But under our system, under
8 our system recourse, since --

9 QUESTION: Well, everybody agrees, everybody
10 agrees you realize an amount if you have one of your
11 obligations assumed.

12 MR. SMITH: Well, but, Mr. Justice White,
13 under our system, since Crane, we have been equating
14 recourse and nonrecourse liabilities. The example is
15 not exact, but I think what --

16 QUESTION: No, you're just bootstrapping.

17 MR. SMITH: No.

18 QUESTION: You're saying the Crane principle
19 just covers this case like a blanket even though it was
20 reserved.

21 MR. SMITH: I am suggesting, and I think that
22 the decisional laws, apart from the decision in this
23 case, is uniformly to the effect that really the
24 reservation in the case only dealt with the economic
25 benefit aspect of the analysis.

1 QUESTION: You're bound to get around to
2 saying, why is -- why did this seller here, why did this
3 seller realize anything?

4 MR. SMITH: Well, he --

5 QUESTION: What did he realize? You've got to
6 say what, determine what amount he realized.

7 MR. SMITH: Right. We say he realized \$1.8
8 million.

9 QUESTION: And why?

10 MR. SMITH: He realized \$1.8 million because
11 he borrowed \$1.8 million, the code gave him basis for
12 that.

13 QUESTION: Yes.

14 MR. SMITH: At the other end of the
15 transaction, he had not amortized that debt, he had not
16 paid out one bit, and somebody else is going to pay that
17 debt. The property goes along with the debt. And at
18 that point the tax law has to say, well, how do we
19 reconcile these accounts? We've been assuming, we've
20 given you basis during the stewardship of your ownership
21 on the assumption that you were going to pay out
22 something.

23 QUESTION: So what you're really saying is
24 that he realized something when he took the deduction?

25 MR. SMITH: Well, I don't think I am really

1 saying that because --

2 QUESTION: But you want to get it back,
3 anyway. You want to get it --

4 MR. SMITH: Well, we don't want to get the
5 deductions back. In fact --

6 QUESTION: You're going to pay gain on the
7 deduction.

8 MR. SMITH: Well, I think the response to that
9 is that the numbers here are fairly comparable, given
10 the fact that the property is practically 100 percent
11 financed, and the debt has not been amortized one
12 penny. In a situation like that, of course there's
13 going to be a rough comparability between the deductions
14 taken, which represent, quote, a recovery of capital, so
15 to speak, and --

16 QUESTION: Mr. Smith, suppose there'd been no
17 deductions taken at all. What would your position be?

18 MR. SMITH: It'd be exactly the same. It'd be
19 exactly the same. And in fact --

20 QUESTION: Would there be any gain realized?
21 And if so, what would it be?

22 MR. SMITH: There would -- well, I suppose if
23 there were no deduction, if there were no deductions
24 taken, there would be no -- then in that case, the
25 taxpayers' partnership bases would be \$1.85 million.

1 QUESTION: Yes.

2 MR. SMITH: But -- and his amount realized
3 would be \$1.85 million, in which case there would be
4 gain or loss.

5 QUESTION: So you are saying that the
6 deductions constitute the gain, in effect? In effect.

7 MR. SMITH: Well, we don't think -- in effect,
8 in a rough way. But let me emphasize the fact that
9 we're not recapturing deductions. And I think that the
10 best way to illustrate this is by assuming that there
11 were no -- that there were no deductions and that, for
12 example, let's assume that the property in this case was
13 nondepreciable. Suppose the property was just a parcel
14 of raw land, which they got a \$1.85 million nonrecourse
15 note. We set this out in our brief and in our reply
16 brief as well. The property then declines to \$1.4
17 million, as occurred in this case. The partners then
18 can't make a go of it. They transfer the property
19 subject to a mortgage.

20 Under the Court of Appeals opinion in this
21 case, and I don't think there can be any quarrel about
22 that, they, the Respondents would have a \$400,000 loss
23 because their basis would be 1.85 and their amount
24 realized would be 1.4.

25 Now, it is absolutely bizarre, to say the

1 least, how people in a situation like that could have a
2 \$400,000 loss. They haven't expended a single penny.
3 And in fact, in this particular case, the error of the
4 court below, it seems to us, is confirmed by the fact
5 that the Court of Appeals gave the Respondents an extra
6 \$50,000 of loss; that is, equal to the difference
7 between their \$1.45 million basis and the \$1.4 million
8 fair-market value.

9 This is the modern equivalent of the miracle
10 of the loaves and the fishes. How can there be a loss
11 here? And in fact, the Respondents no longer have the
12 temerity even to claim that loss, although they did
13 claim it in the courts below, and their support of the
14 decision below necessarily supports the rationale that
15 upholds such a loss.

16 In our view, this is an aberration that
17 doesn't fit with Crane and doesn't really fit with any
18 -- anything logical that one can imagine the code to
19 allow.

20 QUESTION: Mr. Smith, why wouldn't the
21 approach taken by the amicus Barnett solve your problem?

22 MR. SMITH: It would solve the problem to an
23 extent, Justice O'Connor, but our response to that
24 simply is that over the last 45 years, property
25 transfered with liabilities has always -- has always

1 been considered by -- by the Treasury to be transfers of
2 the property along with the liability. You don't
3 bifurcate these things in that way.

4 QUESTION: Do you take the position that the
5 Treasury Department could subsequently decide to
6 approach it exactly that way; that that's within --

7 MR. SMITH: I think it would --

8 QUESTION: -- the framework of the statute?

9 MR. SMITH: I think it would be a radical
10 transformation. It would -- it would -- I think it
11 would be contrary to -- to all the assumptions that have
12 proceeded from this Court's Crane case.

13 QUESTION: Would it be --

14 MR. SMITH: And that's why --

15 QUESTION: -- consistent with the statutory
16 structure to take that view?

17 MR. SMITH: One can read the statute the way
18 the amicus reads the statute. However, the Treasury has
19 for the last 50 years read the statute to impose capital
20 gains in a situation like this one. And we feel that
21 Treasury's reading of the statute is a permissible one,
22 and given the fact, the deference that the -- such
23 administrative constructions are given to -- by the
24 courts in general and by this Court, we feel that the
25 proper result here is the imposition of capital gains on

1 the \$400,000.

2 QUESTION: Let me ask you a hypothetical. If
3 the purchaser here had paid the taxpayer \$1.4 million in
4 cash for this property free and clear --

5 MR. SMITH: Uh-huh.

6 QUESTION: -- and the taxpayer had then taken
7 that \$1.4 million and paid the secured party the 1.4 in
8 full satisfaction of the \$1.8 million debt, I assume you
9 would recognize then that the amount realized on the
10 property was the 1.4 million, not the 1.8?

11 MR. SMITH: No.

12 QUESTION: No?

13 MR. SMITH: I think it would still be 1.8.
14 Essentially, and in fact, it seems to me that the income
15 there -- I mean, you know, there's obviously gain in the
16 situation like that when you discharge a \$1.8 million
17 liability with a \$1.4 million piece of property. Our
18 view is that that's --

19 QUESTION: But it doesn't occur on the sale of
20 the property, does it?

21 MR. SMITH: Well, but you know, it's part and
22 parcel of -- I mean I think the Commissioner would take
23 the position that since the liability secured the debt,
24 it's part and parcel of the same thing, without meaning
25 to make a pun, and that that would still be -- I mean

1 there's obviously, in your example, still gain. The
2 amicus would take the position that it was gain from
3 cancellation of indebtedness, it would be ordinary
4 income.

5 But the important thing, it seems to us, the
6 significance that I draw from the amicus presentation is
7 that we both agree that there's gain in the transaction
8 like this. It seems to us that the consistent
9 administrative position as to the kind of gain it is,
10 from Crane and from all the cases like Millar, have
11 always been capital gain and not ordinary income.

12 I cannot -- I cannot say that there cannot be
13 a situation where the transaction, the two transactions,
14 the liability aspect of the transaction and the asset
15 aspect of the transaction, might be so separate and
16 unrelated that there might be a determination of
17 ordinary income.

18 But this case before the Court is not such a
19 case. The Commissioner's determination of capital gain
20 we think is correct.

21 QUESTION: The professor would give you more
22 than you asked for.

23 MR. SMITH: The professor would give us more
24 than we asked for; that is true.

25 QUESTION: Let me ask you one other question

1 about Crane. And that is, that -- so I am sure that I
2 know your position -- do you feel that this case can be
3 affirmed without overruling Crane?

4 MR. SMITH: No. We think that it's -- we
5 think that the --

6 QUESTION: Leaving Footnote 37 aside, I take
7 it then that it is your position that Crane controls
8 this case?

9 MR. SMITH: That the rationale and teaching of
10 Crane controls this case, and that the Court of Appeals
11 -- in fact, if there need be any evidence of that, it's
12 the fact that the Court of Appeals denied, explicitly
13 denied, a connection between basis and amount realized.
14 I think it's on page -- page 35a, note 9 of the
15 appendix. The Court of Appeals said, there is simply no
16 relationship between basis, adjustments to basis, and
17 amount realized. And Crane establishes a functional
18 relationship. I cannot see any more disparate view, you
19 know, views, more contrary views.

20 It seems to us that the logic of the decision
21 below cannot be squared with what Crane held, and what
22 it seems to us that all responsible practitioners both
23 of the public and private tax law have assumed that
24 Crane has held.

25 QUESTION: May I ask you one question about

1 your position as applied to Crane itself? Supposing on
2 the facts of Crane, where you have inherited property,
3 the property had been disposed of at a time when its
4 fair-market value was below the amount of indebtedness.
5 You would still say there that the heir would have a
6 full gain as to the extent of the indebtedness? The
7 measure -- you would apply it, Crane itself, you would
8 say, would have been decided the same way if the
9 property --

10 MR. SMITH: Exactly. And I think then they
11 would have had to have faced up. There wouldn't have
12 been a Footnote 37, and we wouldn't have -- I wouldn't
13 have --

14 QUESTION: In fact, about half the opinion
15 couldn't have been written.

16 MR. SMITH: -- and I wouldn't be standing
17 here, because presumably all of this would have been
18 solved.

19 The problem -- the problem simply is that
20 there are a lot of strands in Crane. Although Crane --

21 QUESTION: But your loaves-and-fishes argument
22 is not very persuasive when you have inherited property.

23 MR. SMITH: Yes.

24 QUESTION: Someone inherits property and
25 inherits no obligation, but the property is encumbered,

1 and then they dispose of it by just abandoning it. They
2 suddenly realize a gain in the amount of the
3 encumbrance, under your view?

4 MR. SMITH: Well, right, although tax lawyers
5 have no problems with that sort of thing only because --
6 but the point is that --

7 QUESTION: No, but --

8 MR. SMITH: -- if you get -- if you get basis
9 in something, then it has to be -- it has to be
10 considered -- it has to be -- there has to be a
11 reconciliation at the other end and --

12 QUESTION: Maybe tax lawyers don't, but
13 taxpayers do, wouldn't you say?

14 MR. SMITH: That's true -- that's simply --
15 that's true, although we think -- we think in this
16 particular case where the concept of basis requires an
17 economic outlay either now or sometime, here where the
18 Respondents have paid not a penny other than the small
19 cash contributions that they made to the partnership, it
20 seems absolutely anomalous, to say the least, that they
21 could -- that they could achieve permanent exclusion of
22 \$400,000 of gain. This is not simply deferral in this
23 context; this is permanent exclusion of gain.

24 QUESTION: Now, the basis that the purchaser
25 has in this property is only \$1.4 million?

1 MR. SMITH: Yes, that is true, Justice
2 O'Connor. And the reason for that is simply that the
3 Internal Revenue Service has, I think soundly, taken the
4 position that when value of property is way below a
5 nonrecourse debt, there have been a lot of tax-shelter
6 activity in which the nonrecourse debt bears no
7 relationship to the property. Under those
8 circumstances, the Internal Revenue Service has taken
9 the position that at the very most, you get basis equal
10 to the value of the property.

11 QUESTION: It's just a little hard to
12 understand how the basis of the property would be the
13 lower figure but what the seller received is a higher
14 figure.

15 MR. SMITH: Well, I don't think it really is
16 hard to understand if one -- if one looks at it from the
17 seller's point of view, the seller put \$1.8 million in
18 his pocket. He then bought this building. The fact
19 that it declined in value has absolutely no significance
20 to him economically if he's allowed, if he's permitted,
21 if he does, transfer the property along with the debt so
22 that the debt is of no interest to him and the value of
23 the property is of no interest to him.

24 And it really is very much like the suit in
25 the department store; you're just not interested in the

1 whole transaction anymore. And but what the Court of
2 Appeals would say here is that your amount realized is
3 \$1.4 million. Now, how is it possible for you to have a
4 \$400,000 loss in a situation like that when you haven't
5 expended a penny?

6 And going back to my example, we talked -- I
7 think I got off on a tangent when we were talking about
8 depreciation, Mr. Justice Powell. In answer to your
9 question, if the property had just been raw land, there
10 would be a \$400,000 loss, and there isn't -- there would
11 be no loss in a situation like that. There's been no
12 economic expenditure. The taxpayers here are not poorer
13 by a penny. And in our view, that really -- that fact
14 glaringly calls for the reversal of the judgment below.

15 QUESTION: Mr. Smith, let me ask you one other
16 question. Am I correct in understanding that under your
17 view the basis for the transferee -- in this case,
18 Bayles -- is limited by the fair-market value, so his
19 basis is different from the amount realized --

20 MR. SMITH: His basis is \$1.4 million.

21 QUESTION: So that what you're saying is that
22 if fair-market value puts a ceiling on it, then it puts
23 a ceiling on at both ends of the transaction; if the
24 amount of the indebtedness is the major basis, it is at
25 both ends of the transaction?

1 MR. SMITH: Well, the reason for that at the
2 Bayles end of the transaction is simply because -- and
3 there's case law to support this -- that when the value
4 -- when the value of property is greatly -- it has great
5 disparity between that and nonrecourse debt, that basis
6 ought not to be the nonrecourse, the value of the
7 nonrecourse debt because it's almost like not real debt
8 in the sense that it has -- there's only a fanciful
9 aspect of that, a loan you pay, very much like a
10 contingent debt, and the courts have uniformly rejected
11 inclusions of basis in that circumstance.

12 QUESTION: So going back to my Crane question
13 earlier, if the value of the property at the time of the
14 death of the person from whom it was inherited, had a
15 fair-market value of less than the indebtedness, that
16 would have been her basis at the time?

17 MR. SMITH: Yes.

18 QUESTION: Yes.

19 CHIEF JUSTICE BURGER: Mr. Mankoff.

20 ORAL ARGUMENT OF RONALD M. MANKOFF, ESQ.,

21 ON BEHALF OF RESPONDENTS

22 MR. MANKOFF: Mr. Chief Justice, may it please
23 the Court:

24 The -- let me start by setting at rest a
25 couple of questions that Mr. Smith has raised. First,

1 we agree there should be no deductible loss without
2 economic detriment. Similarly, there should be no
3 taxable gain without economic benefit. The way the tax
4 system deals with this is to say there may be loss
5 realized but not recognized and not allowed. And we
6 agree with counsel for the government that the taxpayers
7 did not suffer a deductible loss in a situation where
8 they suffered no economic detriment. And the cases
9 consistently so hold.

10 So that to the extent the government contends
11 that is an issue in this case, we have not raised that
12 issue except in the Tax Court.

13 QUESTION: Well, is it fair to say has your
14 position been consistent on that all the way through?

15 MR. MANKOFF: Your Honor, we raised the issue
16 at the opening of the Tax Court case. We lost in the
17 Tax Court. We did not raise it in the Fifth Circuit,
18 and it was not ruled on by the Fifth Circuit. The Fifth
19 Circuit did not hold that we had a deductible loss.

20 QUESTION: So your position has not been
21 consistent all the way through?

22 MR. MANKOFF: No, Your Honor, it was not
23 consistent in the Tax Court below.

24 We have tried to abandon that issue
25 consistently, by letters and representations and

1 statements to the government. But now that they find it
2 the most, the strongest handle they have to waggle at
3 us, they waggle it at us again and again. We agree
4 there is no deductible loss.

5 QUESTION: I would like to waggle it at you,
6 too, because --

7 (Laughter.)

8 QUESTION: -- it seems to me that if the
9 statute, you just read the words, the definition of
10 "amount realized" and all the rest of it, how can it
11 have one meaning in the loss situation and a different
12 meaning when you're looking at the amount realized
13 that's claimed to be a gain?

14 MR. MANKOFF: Because losses and deductions
15 are a matter of legislative grace. They are not given
16 to taxpayers unless the Internal Revenue Code allows
17 it. Income, on the other hand, is constitutionally
18 taxed, and we pay taxes on virtually all income.

19 QUESTION: But even if it's a matter of
20 legislative grace, and maybe you don't want it in this
21 case but the next taxpayer comes along and says, well,
22 if these words mean what the Fifth Circuit said they
23 mean in this case, we're entitled to take the loss. And
24 why wouldn't that be correct?

25 MR. MANKOFF: Because there is no economic

1 detriment.

2 QUESTION: But what in the statute requires an
3 economic detriment?

4 MR. MANKOFF: Section 165 of the Internal
5 Revenue Code says that losses shall be allowed unless
6 compensated for by insurance or otherwise. It's our
7 feeling that the "or otherwise" constitutes a broad
8 range of negative economic effect. That is, any time
9 the taxpayer doesn't truly suffer the loss, and he may
10 -- and the insurance analogy, I think, is very strong --
11 when our car is damaged, we suffer a loss, but we're not
12 allowed to deduct it because the insurance company
13 reimburses us for it.

14 But the loss has been suffered. Just as I
15 think the government's illustration of a piece of
16 property that we own going down in value from \$1.8
17 million to \$1.4 million, I think a loss has occurred. I
18 think something has happened in the world that shrinks
19 the assets of the world by \$400,000. So I think to say
20 there's no loss begs the question.

21 To go further and say that by -- we will
22 manipulate the Internal Revenue Code to prove there's no
23 loss by increasing the amount realized on this \$1.4
24 million piece of property, we therefore demonstrate
25 there's no loss. Now, that to me is the ultimate of

1 alchemy, because a loss really has been suffered. It's
2 not deductible because the taxpayer has not suffered a
3 true economic detriment. The cases say that in
4 situations like that, taxpayers are not allowed to
5 deduct a loss even though the loss is experienced, is
6 suffered, is realized.

7 QUESTION: When you say somebody, by the
8 depreciation of the property somebody has suffered a
9 loss, but is it the taxpayer if he hasn't suffered any
10 economic harm?

11 MR. MANKOFF: No. No.

12 QUESTION: It's probably the bank.

13 MR. MANKOFF: Probably. Probably.

14 QUESTION: But it isn't the taxpayer's loss?

15 MR. MANKOFF: Clearly not. Therefore, no
16 deductible loss.

17 QUESTION: Let me put this hypothetical to
18 you. First, I would assume you would agree that it
19 would make no difference if this were a partnership or
20 an individual.

21 MR. MANKOFF: I would prefer to reserve --
22 actually, it should make a difference, sir, because --

23 QUESTION: Let's assume for --

24 MR. MANKOFF: All right.

25 QUESTION: -- to simplify the hypothetical,

1 it's an individual, and the transaction is exactly the
2 same. Now, the taxpayer is making up a statement for
3 his bank before this transaction occurred; that is,
4 after he had acquired the property but before
5 disclosing. And then assume after the transaction is
6 completed, he makes up the financial statement for the
7 bank for other purposes. Can you suggest how the
8 transaction would be treated in terms of assets and
9 liabilities in his financial statement?

10 MR. MANKOFF: Well, he certainly has suffered
11 -- he has realized no gain. That is to say, he is not a
12 richer man by having disposed --

13 QUESTION: Well, in the first place --

14 MR. MANKOFF: -- of the property.

15 QUESTION: In the first place, he wouldn't
16 list this liability --

17 MR. MANKOFF: Exactly.

18 QUESTION: -- as a liability on his first
19 statement because it was nonrecourse.

20 MR. MANKOFF: Exactly.

21 QUESTION: Do you agree?

22 MR. MANKOFF: Yes, sir.

23 QUESTION: Now, after the transaction is
24 completed, would you make that comparison for me?

25 MR. MANKOFF: Well, actually, I think at the

1 start of the transaction, there would be balancing
2 entries; that is, there would be an asset and a
3 liability in equal amount, whatever those amounts were,
4 \$1.8 million of asset, \$1.8 million of liability. On
5 the disposition of the asset, both would disappear from
6 his balance sheet.

7 Now, that is the simple fact of it. His
8 assets are not enriched; that is, we don't have \$400,000
9 of assets freed up by virtue of the disposition of the
10 property, which would have been the case had this been
11 liability debt. That is to say, if he had -- if there
12 had been cancellation of \$400,000 of liability debt,
13 then other assets -- stocks, bonds, and cash -- would
14 have been freed up and he would have had gain.

15 But in a situation like this, it's as though
16 the man owned only one asset and owed only one debt.

17 QUESTION: Well, in the Chief Justice's
18 example, though, when you're making up your statement to
19 the bank after you purchase the property and build the
20 building and complete the loan and you close it -- but
21 this is before the sale --

22 MR. MANKOFF: Yes.

23 QUESTION: -- before you sell. How do you
24 enter it on your balance sheet?

25 MR. MANKOFF: I would say we have \$1.8 million

1 asset and \$1.8 million of liability.

2 QUESTION: Well, he doesn't owe the
3 liability. The property is subject to it. So it
4 reduces his asset.

5 MR. MANKOFF: Well, are you saying, sir, that
6 it would be appropriate to say zero asset because it's
7 on a --

8 QUESTION: Well, that's what I am asking you.
9 What do you think the accounting --

10 MR. MANKOFF: Let me say I am free of any
11 misconceptions because I am not an accountant. I know
12 that a loss --

13 QUESTION: Your tax accountant knows.

14 MR. MANKOFF: The -- the accountants, you
15 know, when faced with this situation, say, my goodness,
16 if something has happened on the left side, we must act
17 on the right side.

18 The answer that I give is that this is federal
19 taxation, this is not double-entry bookkeeping, that the
20 tax system very often allows entries on the left side
21 with no effect on the right side.

22 We give a lot of deductions, in the oil
23 industry, for example, that are never offset anywhere
24 else in the system. And notwithstanding Mr. Smith's
25 statement, there is in many situations no reconciliation

1 of cost basis. We get cost basis in a number of
2 situations that don't require that we give it back later
3 on.

4 For example, in the case of individuals who go
5 through bankruptcy, we have cancellation of debt, we
6 have no income, and yet that debt may well have produced
7 deductions, it may well have acquired assets that
8 produce depreciation deductions. We don't go back and
9 recapture it.

10 Notwithstanding what Mr. Smith says, the Crane
11 case did not hold that anything included in basis must
12 find its way into amount realized. The only reference
13 to functional relationship was a common definition of
14 property. What the court was saying was property must
15 mean the same thing in the basis section as property
16 means in the amount realized section because we use
17 these two concepts in computing gain. Therefore, we
18 must use apples and apples. But it didn't -- they were
19 not saying that anything that's included in basis must
20 find its way into amount realized, because they are not
21 related, because basis is cost in one situation, or
22 basis is value. In Mrs. Crane's situation, there was no
23 cost element.

24 QUESTION: Mr. Mankoff, in the corporate
25 reorganization context, I assume you would concede,

1 though, that the cancellation of the indebtedness is the
2 amount received for tax purposes under sections 357(c)
3 and 358?

4 MR. MANKOFF: 357(c), which has to do with the
5 contribution of assets subject to liability, does not
6 appear to have a limitation on it based upon the value
7 of assets. As indicated in the brief, however, 311(c),
8 which describes assets coming out of a corporation, does
9 have that kind of limitation.

10 I don't know why there's an inconsistency.
11 Generally, the code and the courts have treated
12 fair-market value and economic benefit as being real
13 concepts that must be part of our tax system, because
14 without them we don't have a touchstone with which to
15 measure the consistency and fairness of our system.

16 QUESTION: May I ask you a question?

17 MR. MANKOFF: Yes.

18 QUESTION: Supposing we have a transaction
19 similar to this, but before the owner of the property
20 disposed of it, they realized the fair-market value
21 declined from \$1.8 million to \$1.4 million, and the
22 owner went to the bank and said, we can't carry the \$1.8
23 million loan, would you reduce the indebtedness to a
24 more realistic figure? And they agreed to reduce the
25 indebtedness, say, to \$1.5 million. Then he continued

1 to own it for a while. But he never is on the note.

2 Would he realize any tax -- would there be any
3 taxable consequences in changing the principle amount of
4 the note when it's a nonrecourse note?

5 MR. MANKOFF: I would say first there should
6 be no immediate tax consequence. No. I think very
7 often that's treated as an adjustment of the purchase
8 price if you're talking about the seller. In the
9 situation you're describing, talking about the bank, I
10 don't think it would be treated as adjustment of sale
11 price. And clearly, there would be no tax at that time,
12 no.

13 QUESTION: And suppose if they did that, and
14 then after owning it for 2 or 3 years, and then after
15 another year or so then he disposed of it, as he did in
16 this case, fair-market value at \$1.5 million. You would
17 still say -- in that case, what would be the tax --

18 MR. MANKOFF: We'd have exactly the situation
19 we have here --

20 QUESTION: What we have here.

21 MR. MANKOFF: -- which is, there is no gain
22 realized without economic benefit.

23 QUESTION: And even though the liability was
24 reduced in amount, that that still didn't result in any
25 taxable benefit of any kind to the owner of the property

1 who was not on the note?

2 MR. MANKOFF: Not if he's not liable for the
3 note, Your Honor, no. This gets back to what Crane was
4 talking about. And the question was asked, must we
5 overrule Crane in order to affirm the Fifth Circuit?
6 And the answer is no. Crane dealt with only those
7 situations which resemble recourse debt. They properly
8 announced the law as to recourse debt and said that
9 where nonrecourse debt fits that same situation, then
10 we're going to apply the recourse debt rule.

11 And I understand what the court was saying.
12 I, notwithstanding the government's inability to
13 understand this concept, I own some property subject to
14 nonrecourse debt. It has a value higher than that
15 mortgage, and I treat it as though I owe that debt,
16 every penny of it. And I will pay that debt rather than
17 lose that property. And that's all the court was saying
18 in Crane, that in a case where the nonrecourse debt is
19 going to be treated as recourse debt, there's nothing
20 wrong with treating the entire situation as though there
21 was liability.

22 But they did say, this will -- this probably
23 is not the rule, obviously is not the rule, where you
24 don't have a similarity of situation; where you have a
25 situation where an individual will not treat the debt as

1 his own, then it should not be treated the same.
2 Because we don't have economic benefit, we don't have
3 any advantage to the taxpayer. Certainly, our system is
4 based upon that.

5 At no time was the Crane court saying that
6 there must be an inclusion or a paying up at the end of
7 the transaction for the advantage of utilizing basis or
8 cost, because, you know, mortgage debt was not really in
9 Mrs. Crane's cost, as such. Her cost was the value of
10 the property. It happened the court said, the value of
11 the property is the total property, unreduced by any
12 debt.

13 And so we're not talking here or in Crane
14 about a situation where we must replace that at the end
15 of the transaction. All the court was saying was that
16 where there is a similarity and a resemblance that will
17 cause people to treat these transactions identically,
18 then there is nothing inappropriate about the tax
19 consequences being identical.

20 And if we -- a similar situation -- if we were
21 at risk in this transaction so that we were in default
22 and a foreclosure sale occurred and a third party bought
23 in this property at \$1.4 million, and the bank then said
24 to us, well, we want the other \$400,000, and we said,
25 well, we'll try to get it for you, certainly no one

1 would say at that moment that we had any gain in excess
2 of \$1.4 million.

3 No one would talk to us about the depreciation
4 deductions we had enjoyed in years past. No one would
5 talk to us about the necessity of the quid pro quo, if
6 you please, of replacing that -- the cost basis incident
7 to mortgage. We haven't yet paid it, we may pay it in
8 the future, or we may not. But in that taxable year,
9 certainly no one would talk of a tax consequence
10 including that as part of our gain. And why should
11 someone who is in a nonrecourse position be treated less
12 favorably than someone who owes the debt?

13 QUESTION: I am not sure, Mr. Mankoff, whether
14 you had completed your response to my hypothetical or
15 whether you did complete it and I didn't follow you.
16 What's the difference in these two statements in terms
17 of the net worth of this individual in the hypothetical
18 before and after?

19 MR. MANKOFF: Mr. Chief Justice, in my
20 opinion, the net worth --

21 QUESTION: If you're making a statement form,
22 how would you make it up?

23 MR. MANKOFF: Yes. In -- I would make it up
24 showing a liability and an asset in identical amount.

25 QUESTION: In the first statement?

1 MR. MANKOFF: That's right, in the first
2 statement. And I would then show a cancellation of both
3 items on the disposition of the property. Period. I
4 can't conceive --

5 QUESTION: He's neither richer nor poorer?

6 MR. MANKOFF: Exactly. Exactly. It's as
7 though the man owned no other assets. Yes. He is
8 neither richer nor poorer. He has used all of the
9 assets available to pay this debt to pay this debt. He
10 has walked away from the transaction with nothing that
11 he didn't have before.

12 QUESTION: Of course, on the first statement,
13 he has no personal liability for the obligation, does he?

14 MR. MANKOFF: No, he does not, Your Honor.

15 QUESTION: Well, what if his income from the
16 property, though, the rental income from the property,
17 just paid the -- was such that it didn't earn any income
18 but he had a cash flow equal, net cash flow that he
19 could put in his pocket equal to the depreciation.

20 MR. MANKOFF: He would have gross income
21 measured by the rental income. He would have a
22 deduction equal to the depreciation --

23 QUESTION: Yes. And he would have cash then
24 that he didn't have before.

25 MR. MANKOFF: Yes. That'd be relevant to the

1 rental income.

2 QUESTION: Yes. And so that -- so he would
3 walk away from the transaction with the -- with money
4 equal to the amount of the deductions.

5 MR. MANKOFF: He would also have, if I may
6 submit --

7 QUESTION: Isn't that right?

8 MR. MANKOFF: Yes.

9 QUESTION: He'd have that much --

10 MR. MANKOFF: Given those two situations.

11 QUESTION: -- more money afterwards than he
12 had before.

13 MR. MANKOFF: Yes. That is absolutely
14 correct. This is the transaction in 1970 and 1971.
15 This is the transaction to which the government has no
16 complaints, and their question now is --

17 QUESTION: Well, I know, but -- I know, but
18 that's the very amount of money that they would like to
19 tax on.

20 MR. MANKOFF: The question then becomes, can
21 we rewrite section 1001(b) to correct earlier undeserved
22 deductions? I think the answer is clearly no. The
23 "amount realized" definition has never been rewritten to
24 pick up earlier errors. It says merely, amount realized
25 is the cash received and property other than cash

1 received to the extent of its fair-market value.

2 That definition has never been distorted or
3 rewritten in order to recover amounts which might have
4 been distorted in previous years. And it should not be
5 done in this case.

6 I would like to mention however briefly the
7 implication of the partnership sections because in
8 addition to 1001(b) there is another section that
9 clearly applies, carefully written by the Congress in
10 its section 752(c). It is allegedly a rewriting or a
11 repetition of the Crane rule, and it limits itself to
12 fair-market value. Therefore, we believe it must be a
13 description or an enactment of Footnote 37.

14 And it says that in the case of a partnership,
15 which is what was involved here, that liability shall be
16 deemed to be liabilities of the owner of property where
17 there is no recourse only to the extent of the value of
18 that property.

19 Now, the Tax Court below said that clearly the
20 language of this statute covered our situation. They
21 said, however, that the legislative history suggests
22 that the 752(c) was to apply only in two situations;
23 that is, where property is contributed to a partnership
24 or withdrawn from a partnership.

25 We submit that that kind of result limits

1 section 752(a) and (b) so unnecessarily as to be
2 absolutely ridiculous, because there are other
3 situations in which liabilities of a partnership may
4 increase the basis of partners.

5 For example, this would mean, as was found by
6 the Tax Court subsequently in the Brontes case, that if
7 a partnership acquires an asset subject to a liability
8 in excess of its basis, that section is not within
9 752(c) because it does not involve a contribution of
10 property or the withdrawal of property. And therefore
11 the partners would get increased basis in a situation
12 like that.

13 Now, that case was reversed subsequently on
14 the grounds that there was no true debt involved. But
15 had there been true debt in a situation like that, the
16 ruling of the Tax Court below would have destroyed the
17 efficacy of 752(c) in virtually all situations other
18 than the contribution and the receipt of properties.

19 And we think that we all want a fair and
20 consistent taxing treating system. We don't believe
21 that the rewriting of two sections of the code which
22 contain clear and explicit language -- that is, section
23 1001(b) and section 752(c) -- so as to recover what the
24 government perceives to be improper earlier deductions
25 taken at a time when there was no risk, is a proper

1 method of achieving a fair and consistent tax system.

2 Thank you.

3 CHIEF JUSTICE BURGER: Do you have anything
4 further, Mr. Smith?

5 ORAL ARGUMENT OF STUART A. SMITH, ESQ.,

6 ON BEHALF OF PETITIONER -- Rebuttal

7 MR. SMITH: I just have a brief point. The
8 taxing system -- in this particular case, the
9 Respondents borrowed \$1.8 million, they put it in their
10 pocket, and then they went and bought -- and constructed
11 this building. The value of the building, during it,
12 their ownership went down to \$1.4 million. But then
13 they transferred that property along with the debt. They
14 don't have to worry about the debt anymore. Although at
15 one time they had \$1.8 million, which they spent, they
16 were not taxed on that. The code gave them basis for
17 that.

18 QUESTION: When you say they don't have to
19 worry about the debt anymore, they never did have to
20 worry about it.

21 MR. SMITH: They never had to worry about the
22 debt anymore, Mr. Justice Rehnquist, but at the time, if
23 they wanted to hold on to the property, they had to
24 worry about the debt. Now they have given the property
25 away. The debt is not their concern nor is the value of

1 the property their concern. That is the concern, as
2 Justice White pointed out, of the bank because the bank
3 has to look to the value of the property, which is the
4 crime.

5 The Respondents -- the value of the property
6 has absolutely no relevance to Respondents' economic
7 position. If they were to, for example, buy a piece of
8 land for \$1 million, subject to a nonrecourse mortgage,
9 and then the value of that property would go down to
10 900,000, to two, to \$100,000, they haven't amortized the
11 debt one penny. They then walk away from it, they
12 abandon it. The Court of Appeals would say they have a
13 \$900,000 loss because the amount realized is only
14 \$100,000.

15 That -- that is, to say the least, absolutely
16 bizarre. As Judge Friendly says --

17 QUESTION: But Mr. Smith, why couldn't -- I
18 mean your opponent says that in Crane the court read
19 something into the statute that wasn't perfectly clear
20 that was there, why couldn't the court, in effect, say,
21 well, looking at the code as a whole, a loss is not
22 recognized unless there's an economic detriment. That
23 is, I understand, his bottom line. Why couldn't we do
24 that?

25 MR. SMITH: A loss is not recognized --

1 QUESTION: No; a loss is not recognized.

2 You're saying there would be a loss if the fair-market
3 value went down and --

4 MR. SMITH: Well, I mean one can do lots of
5 things. The point is that --

6 QUESTION: But I mean would it be inconsistent
7 with the way the court has construed the code in the
8 past?

9 MR. SMITH: Well, what these statutes mean the
10 same, you know, what's sauce for the goose is sauce for
11 the gander. I mean these statutes mean the same in the
12 gain context as in the loss context. I mean the statute
13 talks about amount realized less basis equals gain or
14 loss.

15 QUESTION: Well, is he right in saying there
16 are no cases in which a loss has been recognized for tax
17 purposes without an economic detriment?

18 MR. SMITH: I think that's absolutely right.
19 It seems to me that the tax law -- the tax law -- I mean
20 the tax law doesn't give losses without economic
21 detriment.

22 I mean in this particular case, they had no
23 economic detriment at the end of the -- at the end of
24 the transaction. In fact, as Judge Friendly said in
25 another context, any other course would render the

1 concept of basis nonsensical by permitting sellers of
2 mortgage property to register large tax losses stemming
3 from the inflated basis and a diminished realization of
4 gain.

5 We submit that the diminishment, the
6 diminution of the realization of gain executed by the
7 decision below is improper and should be reversed.

8 CHIEF JUSTICE BURGER: Thank you, gentlemen.
9 The case is submitted.

10 (Whereupon, at 10:51 a.m., the case in the
11 above-entitled matter was submitted.)
