1       The above-entitled matter came on for oral argument  
2 before the Supreme Court of the United States at  
3 10:05 a.m.

4  
5 APPEARANCES:

6  
7 REX E. LEE, ESQ., Solicitor General of the United States,  
8 Washington, D.C.; on behalf of Petitioner,  
9 the United States Department of Transportation.

10  
11 LLOYD N. CUTLER, ESQ., Washington, D.C.; on behalf of  
12 Petitioners, Motor Vehicle Manufacturers Association of  
13 the United States, et al.

14  
15 JAMES F. FITZPATRICK, ESQ., Washington, D.C.; on behalf  
16 Respondents.

C O N T E N T S

ORAL ARGUMENT OF

PAGE

REX E. LEE, ESQ., on behalf of Petitioner, U.S. Department of Transportation	4
LLOYD N. CUTLER, ESQ., on behalf of Petitioners, Motor Vehicle Manufacturers Association, et al.	16
JAMES F. FITZPATRICK, ESQ., on behalf of Respondents	23
REX E. LEE, ESQ., on behalf of Petitioner, U.S. Department of Transportation - rebuttal	44

1 installation of manual seatbelts. Passive restraints,  
2 which require no independent occupant action for their  
3 effectiveness, were first incorporated into standard 208  
4 in a series of amendments adopted between 1970 and  
5 1972.

6           One of the permitted options under those  
7 amendments was a manual belt system coupled with an  
8 ignition interlock. However, public irritation with  
9 interlock systems led Congress in 1974 to prohibit them  
10 by statute.

11           In 1976 Secretary Coleman attempted to deal  
12 with what he considered to be the root of the problem:  
13 widespread public resistance to mandatory passive  
14 restraints. He proposed a demonstration project  
15 involving up to 500,000 cars installed with passive  
16 restraints in order to smooth the way for their public  
17 acceptance at a later date.

18           Secretary Coleman did not reject mandatory  
19 passive restraints as a long-range solution. He simply  
20 concluded that they would be more effective if preceded  
21 in time by an effort to change the public's attitude  
22 about them.

23           His successor disagreed, as was, in our view,  
24 his prerogative. Within a matter of months, Secretary  
25 Adams dispensed with the Coleman demonstration project

1 and instead adopted the modified standard 208 at issue  
2 here, which made passive restraints mandatory for large  
3 cars beginning with the 1982 model year and all cars  
4 beginning with the 1984 model year.

5           While it permitted manufacturers to choose  
6 between two basic systems, air bags or passive belts, it  
7 was assumed at that time that about 60 percent of the  
8 cars would be equipped with air bags.

9           Four years after the Adams decision, Secretary  
10 Lewis rescinded the mandatory passive restraint features  
11 of standard 208. He based his decisions on three  
12 findings:

13           First, that because of the intervening to  
14 small cars, not one percent -- not 60 percent, but only  
15 one percent of all cars would be equipped with air  
16 bags;

17           Second, that in complying then with standard  
18 208 as it then stood, the seat belts that would be  
19 installed in the overwhelming majority of new cars would  
20 be detachable, and that once detached would be the  
21 functional equivalent of manual belts;

22           And third, that there was substantial  
23 uncertainty about the usage rate of these detachable  
24 belts convertible to manual belts.

25           Under those circumstances, NHTSA could not

1 reliably predict whether increased use because of  
2 detachable belts would fall closer to zero percent or  
3 closer to five percent or ten percent, and for those  
4 reasons, together with the possible adverse safety  
5 effects from public reaction to what the public might  
6 perceive to be another expensive example of ineffective  
7 regulation, the agency could not conclude that the  
8 automatic restraints as then stated met the need for  
9 safety.

10           The Court of Appeals took no issue with the  
11 first two of these findings. It described them as  
12 reasonable. But it said that the third step turned the  
13 question on its head. The court conceded the factual  
14 issue of probable seat belt usage was one which no one  
15 could predict with certainty. Nevertheless, it held  
16 that once the agency had selected the passive restraint  
17 course of action in 1977, the presumption no longer ran  
18 in favor of the agency judgment, but rather in favor of  
19 the very regulation which the agency had concluded did  
20 not meet the statutory objectives.

21           The effect of this unprecedented holding is  
22 truly startling. It effectively deprives an  
23 administrative agency of its authority to regulate in  
24 conditions of uncertainty by making predictive judgments  
25 to resolve that uncertainty, judgments which in many

1 cases, including this one, lie at the very heart of the  
2 administrative process.

3 By definition, where predictive judgments must  
4 be made in uncertain conditions, as they must here, the  
5 location of the burden will usually be determinative.  
6 This case illustrates the mischief of shifting that  
7 burden once the agency proposes a regulation, and here  
8 is the reason why.

9 There are several views concerning which path  
10 leads to the best occupant restraint system. Over the  
11 17 years that Secretaries of Transportation have  
12 struggled with that problem, there have been two major,  
13 enduring, and overarching issues.

14 The first is, how effective will the passive  
15 restraint system really be. Secretary Adams in 1977  
16 concluded that 60 percent of all cars would be equipped  
17 with air bags under his proposal and that this would be  
18 highly effective. By 1981 the circumstances had changed  
19 dramatically. It was clear that compliance would  
20 consist of easily detachable belts, and Secretary Lewis  
21 concluded that under those new circumstance the  
22 requirements created by standard 208 as it then stood  
23 would not be effective.

24 There has always been a second broad issue,  
25 separate and very important. And it is: Assuming that

1 there is to be a passive restraint requirement at some  
2 point in time, which of two possible approaches should  
3 the agency emphasize first in time? Do you push ahead  
4 first with hardware requirements or do you emphasize  
5 first changes in public attitude?

6           The right answers to those two controlling  
7 questions depend on the resolution of multiple  
8 uncertainties, technological uncertainties and  
9 behavioral uncertainties. Someone has to perform the  
10 necessary task of sorting out those uncertainties,  
11 balancing the relevant considerations on all sides, and  
12 then making a judgment concerning which alternatives  
13 ought to be pursued and in what order.

14           It is equally clear, I submit, that that job,  
15 making predictive judgments in conditions of  
16 uncertainty, belongs to the administrative agency.  
17 Standard 208 has been in existence since 1967. It's  
18 been amended many times. After more than a decade of  
19 evolving experimental administrative efforts and  
20 continuing efforts by the Courts of Appeals for the  
21 Sixth Circuit and also for the District of Columbia,  
22 there is nothing in law and nothing in common sense that  
23 suggests that that evolution should be frozen as of the  
24 1977 amendment.

25           In 1976 Secretary Coleman concluded that the

1 best way to implement the statute was to attempt first  
2 to change human attitudes. Was he right? Was that the  
3 best solution? Reasonable persons will differ. But  
4 what ought to be clear to everyone, I submit, is that  
5 the Coleman choice of alternative did not preclude  
6 Secretary Adams from choosing another alternative  
7 without first bearing the probably impossible burden of  
8 disproving the predictive assumptions underlying the  
9 Coleman decision.

10 And for the same reason, in 1981 Secretary  
11 Lewis did not rule out the possibility of active  
12 restraints as a long-range solution. All options are  
13 still available. All options are still open.

14 QUESTION: Mr. Lee, may I ask you one  
15 question. Is it your view that the standard to be  
16 applied in deciding whether a rescission was proper is  
17 the same as the standard to be applied in whether or not  
18 to adopt a regulation in the first instance?

19 MR. LEE: Mr. Answer, Justice Stevens, is yes,  
20 they're very close, but I need to modify it in this one  
21 way. The standard is arbitrariness and capriciousness,  
22 is it arbitrary and capricious. And as I read the cases  
23 that have been handed down from this Court, it requires  
24 that the agency take into account and make its  
25 predictive judgments concerning all the information it

1 has before it.

2 Now, in the course of having explored one  
3 path, there will be some information that the agency has  
4 to take into account, and it must take that into  
5 account. But at the end of the day, two things: Number  
6 one, it's still the arbitrary and capricious standard.  
7 It's a question of whether they've acted irrationally,  
8 and the presumption still runs in favor of the propriety  
9 of agency action.

10 And second, in the great majority of  
11 instances, and certainly I would say in this one, the  
12 standard will be about the same for not adopting a  
13 regulation in the first place or rescinding one.

14 QUESTION: About the same?

15 MR. LEE: Well, it's always governed by the  
16 arbitrary and capricious standard.

17 QUESTION: I understand that. Really what I'm  
18 asking you is, do you think the Secretary has the same  
19 latitude in rescinding, just the same broad -- in  
20 rescinding this regulation, as he would have had in  
21 deciding whether or not to put it into effect in the  
22 first place?

23 MR. LEE: Yes, except that if in the process  
24 of enacting -- of considering the regulation in the  
25 first place he has information that has come before him,

1 he does have the obligation to take that information  
2 into account. Now, if it had been presented to him in  
3 another kind of context, he would still, of course, have  
4 that obligation to take that into account.

5 QUESTION: Wouldn't he in promulgating a  
6 regulation have an obligation to take into account --

7 MR. LEE: Anything that comes before him, of  
8 course.

9 QUESTION: Then you really are saying it's the  
10 same standard, I think.

11 MR. LEE: I think in the overwhelming majority  
12 and maybe always, it will be the same standard, yes.

13 QUESTION: Do you think he had to make any  
14 findings at all?

15 MR. LEE: Excuse me?

16 QUESTION: Do you think he had to make any  
17 findings at all? What if he'd done what he did in  
18 February. Would that have been lawful?

19 MR. LEE: I would certainly still have  
20 defended what he did.

21 QUESTION: Well, I understand that, but --  
22 (Laughter.)

23 MR. LEE: Though not under all circumstances  
24 will I defend what he did.

25 But it would have made my case perhaps more

1 difficult, but I think you would still look to see  
2 whether an objective Secretary of Transportation, acting  
3 under all of the facts and circumstances that were then  
4 before him, acted arbitrary and capriciously. And I  
5 would say, yes, that while we would have a less adequate  
6 explanation as to why, it would still be not arbitrary  
7 or capricious.

8 QUESTION: On that same point, is the agency  
9 required to articulate facts which will rationally  
10 support a decision?

11 MR. LEE: I would have to say that if the  
12 Court of Appeals for the District of Columbia in an  
13 earlier phase of this very litigation is correct, the  
14 answer to that question is no. In the Pacific Legal  
15 Foundation case, the question was did Secretary Adams in  
16 his 1977 decision have to take into account probable  
17 public reaction. The court said yes, that the Secretary  
18 did have to take it into account. The Secretary had  
19 said it was not important to take it into account. The  
20 court nevertheless held that it was reasonable.

21 So my answer to that is no, there is no  
22 obligation to set forth --

23 QUESTION: To articulate facts that rationally  
24 support the decision?

25 MR. LEE: I think that there is no obligation

1 under the Administrative Procedure Act. Needless to  
2 say, it is a good procedure and it helps a reviewing  
3 court and facilitates, maximizes, the likelihood that it  
4 would be upheld as proper. I do not think that it is a  
5 requirement, that it is a per se requirement in every  
6 instance under the arbitrary and capricious standard.

7 QUESTION: Was it necessary in this instance  
8 for the Secretary to consider not only whether the  
9 detachable belt option was ineffective, but also whether  
10 it would be appropriate to require non-detachable belts  
11 or whether it would be appropriate to require the air  
12 bag approach, the other options?

13 MR. LEE: The answer is no. The answer is no,  
14 and the reason is this. The Court of Appeals holding to  
15 the contrary that there was the obligation to consider  
16 these other alternatives -- and incidentally, the  
17 details of those alternatives will be discussed more  
18 thoroughly by Mr. Cutler -- rests on the Court of  
19 Appeals' assumption that passive restraints are required  
20 by the statute, So that if detachable belts wouldn't do,  
21 then the court has -- then the agency has an obligation  
22 to go on and consider some other form of passive  
23 restraint.

24 In fact, it is clear that the statute has  
25 never required passive restraints. The only source in

1 law which ever provided for passive restraints is an  
2 agency regulation, and the agency has statutory  
3 authority to revoke its own regulations.

4           The only Congressional mandate is to enact  
5 regulations which are practical, meet the need for  
6 safety, and are stated in objective terms. And that  
7 leaves a very broad leeway to the administrative agency  
8 as to the kinds of standards to adopt in implementation  
9 of that broad standard, and that includes the time order  
10 according to which either one alternative will be  
11 considered, and none has been foreclosed by what  
12 Secretary Lewis has done.

13           Now let me make one final point, and it bears,  
14 Justice O'Connor, on this emphasis on alternatives. The  
15 one thing that that emphasis on alternatives that is  
16 made both by the Court of Appeals and also the  
17 Respondents bears out is that it really underscores and  
18 confirms the fact that the situation as it stood in 1981  
19 was not satisfactory, and that the Secretary was quite  
20 right not to let it simply drift.

21           The telling fact is that by 1981 it was clear  
22 that the 1977 assumption was wrong, standard 208 as then  
23 written was not going to do the job, and under those  
24 circumstances it was not irrational for the Secretary to  
25 rescind, and that is all that he did.

1           The real criticism that has been leveled  
2 against him is that he didn't then go on to pursue  
3 alternatives X, Y and Z. In fact, no alternative has  
4 been foreclosed, but that is a separate issue from the  
5 only issue before the Court, which is the rescission of  
6 a particular form of passive restraint when passive  
7 restraints are not mandated by the statute.

8           The Court of Appeals itself conceded that the  
9 Secretary could suspend the regulation, though he could  
10 not rescind. That I submit is a labeling distinction  
11 without a substantive difference. Regardless of the  
12 label, the Secretary had the authority, once he  
13 concluded we were on the wrong path, not to continue  
14 down that path.

15           I would like to reserve the rest of my time  
16 for rebuttal.

17           CHIEF JUSTICE BURGER: Mr. Cutler.

18           ORAL ARGUMENT OF LLOYD N. CUTLER, ESQ.,

19           ON BEHALF OF PETITIONERS,

20           MOTOR VEHICLE MANUFACTURERS ASSOCIATION ET AL.

21           MR. CUTLER: Mr. Chief Justice and may it  
22 please the Court:

23           I will cover the second ground of the Court of  
24 Appeals decision to set aside the agency's action.  
25 Before doing so, I'd like to supplement the Solicitor

1 General's response to Justice Stevens and Justice  
2 O'Connor by saying that if there was any obligation on  
3 the agency to explain its conduct, its decision, it was  
4 an obligation to give reasons.

5 Those reasons did not have to be facts. They  
6 could just as well be statements of uncertainties about  
7 facts, particularly facts that went to the agency's own  
8 predictive judgment. They didn't have to find facts;  
9 they had merely to conclude that they faced  
10 uncertainties about their predictive judgments, in order  
11 to rescind the standard.

12 As to the issue of alternatives, a majority of  
13 the court ruled that the passive restraint requirement  
14 was not justified -- a majority of the court ruled that  
15 even if the passive restraint requirement was not  
16 justified as written, the agency should have considered  
17 other alternative versions before rescinding this one.  
18 And the majority discussed three such alternatives:

19 One was requiring that if passive belts were  
20 used to comply they be continuous rather than  
21 detachable;

22 Second, requiring compliance by air bags  
23 only;

24 And third, reviving Secretary Coleman's  
25 voluntary demonstration program.

1           None of these three alternatives was listed in  
2 the agency's April 1981 notice of proposed rulemaking  
3 that ended with the rescission. That notice did request  
4 comments on a number of alternative actions, but those  
5 did not include the ones advanced by the Court of  
6 Appeals.

7           And under those circumstances, we submit it  
8 would have been improper for the agency to adopt any of  
9 the different proposals later advanced by the Court of  
10 Appeals before issuing a further notice and providing  
11 opportunity for comment. And we submit further that the  
12 court should not have reordered the agency's own  
13 priorities so as to require it to consider other  
14 alternatives before rescinding this prospective  
15 regulation rather than after doing so, as the agency has  
16 said it would do.

17           And even if it would be appropriate for a  
18 court to remand in some circumstances because an agency  
19 had failed to consider other alternatives, we would  
20 submit that those circumstances do not exist here.

21           The Court of Appeals relied primarily on the  
22 alternative of the non-detachable passive belt,  
23 sometimes called in these statements in briefs the  
24 continuous passive belt. This alternative, though, is  
25 one that the agency did consider fully in the decision

1 under review, and its reasons for rejecting it were  
2 rational, convincing and plainly within its expert  
3 discretion in applying the statutory criteria.

4           These reasons were the safety need for easy  
5 emergency egress, the public fear of entrapment by  
6 attached belts in a crash, and public and Congressional  
7 resistance to use-compelling features in passive  
8 restraint systems.

9           And both the Respondents and, we submit, the  
10 Court of Appeals were wrong to suggest that the  
11 non-detachable belt, so-called, was an obvious  
12 alternative that had already been proven acceptable to  
13 the public in practice and had clearly increased belt  
14 usage.

15           Until 1978 this very standard required that if  
16 a passive belt system were used the belt must be readily  
17 detachable by the passenger to permit escape in an  
18 emergency, for example a crash in which the door  
19 anchoring the belt mechanism could not be opened, or a  
20 turnover.

21           In '78 GM obtained agency approval to  
22 experiment with continuous spool-release passive  
23 shoulder belts and they equipped the 1980 Chevette with  
24 a three-point spool-release belt as a customer option.  
25 But it proved unpopular with the public, despite a

1 million dollar advertising campaign. Only 13,000 were  
2 sold out of over 400,000 Chevettes -- that is about  
3 three percent -- even though the option was offered for  
4 most of the time without charge and salesmen were  
5 offered a \$25 bonus if they could persuade a customer to  
6 take one.

7           Moreover, that 1980 Chevette belt was in fact  
8 detachable to simplify emergency egress, and if you look  
9 at the drawing of the belt, which is at -- it's GM's  
10 drawing at page 2A of the appendix to the NAII brief --  
11 it's the red brief, Justice Stevens -- you will see that  
12 where the lap portion attaches to the lower door there  
13 is a detachable pushbutton buckle, and when it's  
14 detached the entire three-point belt goes slack. The  
15 shoulder portion stays in place and annoys the occupant,  
16 but the system as a whole is inoperable, either as a  
17 shoulder belt or a three-point belt, until it's  
18 reattached.

19           The record has data on the public  
20 acceptability and usage of only three passive belt  
21 systems. There's this 1980 Chevette I just mentioned,  
22 there's the '78 and '79 Chevettes, and the VW Rabbits,  
23 which had a shoulder belt system only, protected by an  
24 ignition interlock, and as the Solicitor General has  
25 said, public annoyance with that interlock in '78 had

1 driven Congress to forbid the agency from requiring --  
2 from issuing any standard that required or permitted the  
3 use of an ignition interlock.

4           So that option was just not available to the  
5 agency. Even though ignition interlocks did  
6 substantially increase belt usage even for active belts  
7 in the '74-'75 period and for passive belts, it's just  
8 not an option that Congress has permitted the agency to  
9 use.

10           In addition, it's important to note, as the  
11 agency did, that there is an important self-selection  
12 factor that explains the high usage rates of these  
13 passive belt systems guarded by interlocks or otherwise,  
14 and that is these customers voluntarily chose cars with  
15 passive belt systems when they had a choice. Even so, a  
16 substantial number of those customers found ways to  
17 disarm the belt system afterward, and in the case of the  
18 Chevette 1980 more than half of the customers, according  
19 to a telephone survey cited by NHTSA, said they would not  
20 buy that same system again.

21           Let me turn briefly to the alternative of  
22 requiring compliance by air bags only. The agency has  
23 repeatedly found that a substantial part of the driving  
24 public still feels uneasy about air bags. That concern  
25 was reflected in the 1974 amendments, where Congress set

1 up a warning flag by requiring that any standard  
2 requiring the use of an air bag had to be subjected to a  
3 Congressional veto procedure. It was reflected in  
4 Secretary Coleman's '77 plan. It was the very public  
5 resistance to the air bag that led him to defer any  
6 mandatory passive restraint regulation until after a  
7 large-scale voluntary experiment had first been made.

8           And finally I come to the Coleman experiment.  
9 the essence of that plan was voluntariness. It  
10 expressly provided that the plan would be cancelled if  
11 the agency either proposed or issued a passive restraint  
12 standard. So that the first step, if anyone was even to  
13 think of reviving the Coleman plan, would be to rescind  
14 this present regulation, which would have frustrated any  
15 Coleman plan and which also would have resulted in 99  
16 percent of the cars having detachable passive belts  
17 rather than air bags.

18           And the agency, when it did do just that,  
19 announced that it plans to undertake new steps to  
20 promote the continued development and production of air  
21 bags.

22           Mr. Chief Justice, if I may I'd like to make  
23 one final point. The Respondents claim that the  
24 automobile industry has not done its part to improve  
25 occupant restraint protection and the usage of restraint

1 systems. We submit the record before you is to the  
2 contrary.

3 Most manufacturers offered active seat belts  
4 before the Safety Act was passed. The auto companies  
5 have lobbied vigorously and have succeeded in obtaining  
6 mandatory child restraint usage laws in 33 states. Ford  
7 and GM pioneered in developing the technology of the air  
8 bag. And well before the Coleman experiment, GM  
9 voluntarily committed to put 100,000 air bag-equipped  
10 cars per year on the road in the model year '74 to '76  
11 --

12 CHIEF JUSTICE BURGER: Your time has --

13 MR. CUTLER: -- but only succeeded in selling  
14 10,000.

15 CHIEF JUSTICE BURGER: Your time has expired,  
16 counsel.

17 MR. CUTLER: If I may, Mr. Chief Justice, the  
18 ignition interlock was also one of Ford's better ideas.

19 CHIEF JUSTICE BURGER: Mr. Fitzpatrick.

20 ORAL ARGUMENT OF JAMES F. FITZPATRICK, ESQ.

21 ON BEHALF OF RESPONDENTS

22 MR. FITZPATRICK: Mr. Chief Justice, may it  
23 please the Court:

24 On behalf of the Respondents and the many  
25 amici here, we urge that the action of DOT in rescinding

1 the passive restraint standard was arbitrary and  
2 capricious and was properly set aside. The rule we're  
3 talking about here today has been described as the most  
4 important safety regulation on the books. Certainly, it  
5 is the most significant effort of DOT to respond to the  
6 killing and maiming on our nation's highways.

7 QUESTION: Who is the author of that  
8 description? Where does --

9 MR. FITZPATRICK: The description came from  
10 William Nordhaus, who was a witness in the proceeding  
11 below, and I think it was also quoted in the Court of  
12 Appeals' decision.

13 Notwithstanding the profound impact on highway  
14 safety of the regulation at issue here, at bottom the  
15 case itself is very simple. It's a conventional case of  
16 APA judicial review of informal rulemaking under the  
17 traditional standards of Overton Park.

18 It turns on the Auto Safety Act, which directs  
19 DOT to promulgate standards to protect the motoring  
20 public against unreasonable risk of death or injury, and  
21 DOT did promulgate such a regulation to require the  
22 installation of passive restraints to provide protection  
23 against death and injury.

24 Now, in anticipation of this rule two types of  
25 passive restraints have been developed and installed,

1 and it's undisputed on this record -- there's no  
2 uncertainty here -- DOT agrees that these two  
3 technologies work.

4 First is an automatic seat belt which has been  
5 installed in hundreds of thousands of cars since 1975,  
6 and those belts are effective. Now, this is not Buck  
7 Rogers space age technology. It is very simple. You  
8 attach the seat belt to the door, you open the door, you  
9 slide in, you close the door and the belt's in place.  
10 That's all that it is. It has been used in hundreds of  
11 thousands of cars and it works.

12 Now, NHTSA's own studies reflect that these  
13 automatic belts in use have increased usage by over 40  
14 percentage points, and the Solicitor General's reply on  
15 pages 14 and 15 underscores the high usage rate of these  
16 automatic belts that have been in place. And taking  
17 account of any demographic differences -- selection,  
18 small cars, particular users -- taking account of any  
19 demographic differences, the agency's own data show that  
20 installation of those seat belts would save almost 6,000  
21 lives a year and avoid over 100,000 injuries each year.  
22 So you have that --

23 QUESTION: Excuse me, Mr. Fitzpatrick. Was  
24 there any comparative study made of the diminution of  
25 such accidents by the 55 mile an hour speed limit and a

1 comparison made with the seat belts?

2 MR. FITZPATRICK: No, I don't think DOT has  
3 done that. DOT has had no question, as far as we can  
4 tell, ever that these automatic seat belts will have a  
5 very high usage rate and will avoid significant numbers  
6 of deaths and injuries.

7 QUESTION: Well, my question goes to whether  
8 the same result could be accomplished or a similar  
9 result by a 55 mile an hour speed limit enforced.

10 MR. FITZPATRICK: Clearly not. I don't think  
11 there's any suggestion on this record --

12 QUESTION: When you say "clearly not," what  
13 study?

14 MR. FITZPATRICK: I don't believe that there  
15 is a study that has suggested that. But there has never  
16 been any argument made by the agency itself in the  
17 consideration of its rulemaking that would suggest that  
18 an alternative of a 55 mile an hour speed limit, as  
19 useful as it might be, would be a response to the  
20 problems of head-on crashes.

21 A head-on crash at 54 miles an hour is a  
22 dreadful event, and one would want to avoid through the  
23 use of passive restraints the death and injury that  
24 comes from crashes at 20, 30, 40 and 50 miles an hour.

25 QUESTION: Mr. Fitzpatrick.

1 MR. FITZPATRICK: Yes.

2 QUESTION: How does the safety and utility of  
3 the passive belts that you were describing a moment ago  
4 bear on the Secretary's decision to rescind the order  
5 about air bags?

6 MR. FITZPATRICK: Well, the Secretary decided  
7 to rescind the passive restraint standard which  
8 permitted compliance by two technologies: either the  
9 automatic belt, which has been found to have high usage  
10 rates; or an air bag, which the agency itself has  
11 concluded is sound and effective.

12 So what the Secretary is doing is rejecting  
13 technology, both air bags and automatic seat belts, that  
14 work.

15 QUESTION: Well, but that's really just  
16 arguing with the facts.

17 MR. FITZPATRICK: No, I don't believe it is.  
18 I think that goes to the very heart of what was at issue  
19 here. You had two technologies that work and at the  
20 last moment the industry advanced a third type of  
21 technology which it said wasn't going to work. It was a  
22 belt that had a release right at one's waist and there  
23 were slits in the car door. You could easily unbuckle  
24 the belt, stow it permanently.

25 And it's on that basis of the technology that

1 didn't work that the Secretary rescinded the  
2 regulation.

3 QUESTION: Well, we're certainly not going to  
4 decide in this Court which of three various systems of  
5 passive restraints would or wouldn't work. That's up to  
6 the Secretary.

7 MR. FITZPATRICK: Well, that's up in the first  
8 instance to the Secretary, with the Court of Appeals in  
9 the first instance looking to see whether there was  
10 appropriate review. But it's quite true, you don't have  
11 to decide which works.

12 You take the agency with the facts as they  
13 found them. They found that automatic belts do work,  
14 and they found that this new GM belt, this fully  
15 detachable belt, doesn't work. You are not, of course,  
16 sitting as a tryer or a weigher of facts.

17 You are taking, we would respectfully suggest,  
18 the findings as the agency has made them and those  
19 findings lead you to the conclusion that the Secretary  
20 has rejected this standard in the face of two  
21 technologies that have been proven effective, simply on  
22 the grounds that the industry has come forward with a  
23 technology that has been designed not to work in terms  
24 of its safety obligations.

25 QUESTION: Mr. Fitzpatrick, you said that they

1 found that the new belt would not work. I don't think  
2 that's right. They found if it's detached it would not  
3 work.

4 MR. FITZPATRICK: That's correct.

5 QUESTION: They really didn't make a finding  
6 on how often it would be detached.

7 MR. FITZPATRICK: That is quite correct. The  
8 finding of the Court of Appeals -- and one should be  
9 precise about this -- the second finding of the Court of  
10 Appeals was that once detached the belt is functionally  
11 identical to the old buckle-up belt.

12 But they also said, once attached or kept  
13 attached, it has the same characteristics of an  
14 automatic belt, and it is somewhat shading to say that  
15 the Court of Appeals said that the new detachable belt  
16 was functionally identical.

17 They said that there's nothing in the record  
18 here that indicates what the usage rates are going to  
19 be, even with this new GM belt. But our point is at  
20 this juncture in the argument that even if the agency  
21 was right that this GM belt was in fact a lemon as far  
22 as safety is concerned, then it was arbitrary and  
23 capricious under this statute to rescind the regulation  
24 rather than to rule out a belt that doesn't work.

25 That, Your Honor, we believe is the only

1 course consistent with the Safety Act, which has said  
2 that the actions of DOT have to have as their overriding  
3 goal the promotion of safety. And you have beyond that  
4 the clear decision of the Congress that in 1966 the  
5 control over the pace of safety progress was going to be  
6 in the hands of DOT and not the industry.

7 Here, by permitting the industry to advance a  
8 technology that doesn't work you are shifting back to  
9 the industry the authority to control the pace of safety  
10 development. We would suggest that nothing could be  
11 more arbitrary in terms of the goals and obligations of  
12 the Safety Act than to permit the industry itself to  
13 meter the pace of safety progress.

14 QUESTION: Well, who established the criteria  
15 in the first place in your view? Where does the  
16 criteria come from, Congress or the agency or some third  
17 area?

18 MR. FITZPATRICK: Well, Congress clearly  
19 stated an obligation that DOT was to promulgate  
20 regulations which would lessen the unreasonable risk of  
21 health and safety to American motorists. So there was  
22 an overarching Congressional obligation. The agency  
23 then promulgated a statute -- it promulgated a  
24 regulation --

25 QUESTION: While you're on that, on the first

1 step that you've just mentioned, is that any more than  
2 saying to the agency, do something? Did Congress say to  
3 the agency any more than, do something about this  
4 problem?

5 MR. FITZPATRICK: Congress imposed -- Congress  
6 did not -- and we want to make this clear -- we have not  
7 argued that Congress said to the agency, promulgate this  
8 passive restraint regulation. What Congress did was to  
9 say, promulgate regulations that will foster the safety  
10 of the motorists on the highway.

11 And the DOT did that, and our point is that  
12 once one revokes, once one faces a revocation situation,  
13 then there has to be support in the record for that  
14 revocation decision. From our point of view --

15 QUESTION: You mean they have to prove they  
16 have made a mistake?

17 MR. FITZPATRICK: They don't have to prove  
18 that they have to make a mistake. However, a decision  
19 to revoke and a decision to promulgate are both based  
20 upon the same standard under the APA, and there has to  
21 be some support for their decision to promulgate, there  
22 has to be some support for their decision to revoke.  
23 And the state of uncertainty is not an a priori state.  
24 It is a condition that is based upon certain factors or  
25 certain determinations of certain pieces of evidence

1 that lead up to the decision, the conclusion of  
2 uncertainty.

3 Well, Mr. Fitzpatrick --

4 MR. FITZPATRICK: Yes, sir.

5 QUESTION: -- you say there has to be support  
6 for a decision to promulgate in the first instance.  
7 Now, supposing this agency, which is charged with doing  
8 something about auto safety, simply promulgates some  
9 regulations saying you're going to use passive seat  
10 belts. Do you think the burden is on the agency to  
11 justify the promulgation of those regulations?

12 MR. FITZPATRICK: Indeed, they had to justify  
13 it twice, in two Courts of Appeals.

14 QUESTION: I'm asking you. Do you think the  
15 burden is on the agency to justify those regulations?

16 MR. FITZPATRICK: No. The burden of proof --  
17 let's be clear. The burden of proof to challenge an  
18 agency action is on the side of the party that is making  
19 the challenge. But under Overton Park, under Overton  
20 Park, clearly the action of promulgation and likewise  
21 the action of revocation is action that cannot be  
22 without any record support. And in that sense, when you  
23 get to the Court of Appeals there has to be some basis,  
24 as the cases in this Court have made absolutely clear,  
25 there has to be some basis for the agency action and

1 there has to be some relationship between what the  
2 agency found and what the agency did.

3 So clearly, in that sense the agency has to be  
4 held to some account to explain or justify their  
5 actions. That's what, as I understood, the agency is  
6 all about.

7 QUESTION: Mr. Fitzpatrick.

8 MR. FITZPATRICK: Yes, sir.

9 QUESTION: But didn't the Solicitor General  
10 say they don't need facts, they can use reasons? Do you  
11 agree with that?

12 MR. FITZPATRICK: There is -- I agree --

13 QUESTION: I should think so.

14 MR. FITZPATRICK: -- in this sense. This is  
15 not a fact-finding proceeding on the record. However,  
16 their reasons have to stand up to scrutiny. There has  
17 to be some basis in the record or in logical argument  
18 that supports the reasons. And here there wasn't any  
19 uncertainty at all about the automatic belts.

20 And as we explained in our brief, there wasn't  
21 any support for their conclusion that there wouldn't be  
22 that minimal increase in even this GM belt to meet the  
23 standard of the statute to foster safety.

24 QUESTION: Are you saying that if an agency  
25 concludes that something that it has tried out and finds

1 that it doesn't work, it can't simply say, this hasn't  
2 worked and we're going to write it off and try something  
3 else? Do they have to give reasons?

4 MR. FITZPATRICK: Yes.

5 QUESTION: Any more reason than that?

6 MR. FITZPATRICK: Yes, they do indeed. I  
7 think the case --

8 QUESTION: Where do you find that?

9 MR. FITZPATRICK: Among other places, you find  
10 it in the Atchison, Topeka proceedings in this Court,  
11 the decisions in this Court. I think it's quite clear  
12 as a matter of administrative law that if an agency  
13 takes you down this road and says this road is justified  
14 under this statute, and then they reverse course and  
15 take you down this road, the cases have held quite  
16 clearly that there is some burden of explaining why this  
17 course is consistent with their statutory mandate.

18 Now, that does not mean that an agency cannot  
19 reverse course. Of course, indeed, if an agency is  
20 uncertain and there is support for that uncertainty in  
21 the record, of course they can reverse course. But they  
22 simply cannot conclusively say, we are uncertain, and  
23 scrap a regulation.

24 That action of revocation, like any other  
25 action under the APA, requires some record support --

1           QUESTION: You say some support in the  
2 record. What if the rescission is promulgated by notice  
3 and comment, so that there isn't necessarily any factual  
4 record at all?

5           MR. FITZPATRICK: We're not suggesting there  
6 has to be a trial type record. We are looking at the  
7 record as we found it here.

8           QUESTION: Well, what record do you mean?

9           MR. FITZPATRICK: Well, the record of the  
10 informal rulemaking. There were comments that were  
11 filed with the parties and there were analyses by the  
12 agency and there was an opinion written by the agency.

13           And in all -- in the opinion of the agency,  
14 there was not a question about the efficacy of the  
15 automatic seat belt and the air bag. So those are the  
16 facts that one is dealing with in making a judgment as  
17 to whether this rescission is justified or whether it is  
18 arbitrary and capricious under the APA.

19           What if the Administrator had simply done it  
20 on the basis of notice and comment, said I'm thinking  
21 about rescinding this because I'm uncertain,  
22 uncertainties have developed in the last four years. He  
23 receives notice and comments, writes an opinion saying,  
24 I have reviewed the notice and comments and I still  
25 think there's a good deal more uncertainty now than

1 there was in 1977, period.

2 Is that challengeable under the arbitrary and  
3 capricious standard?

4 MR. FITZPATRICK: Well, it all depends on what  
5 he wrote in his opinion. If he set forth --

6 QUESTION: I've just given you his opinion.

7 MR. FITZPATRICK: That is his opinion. I  
8 would think that that would be challengeable. He has  
9 not set forth any basis, any rational basis for changing  
10 course, and that is all that's required here and that's  
11 what the Court of Appeals concluded that the agency had  
12 not done. They had not set forth any defensible basis  
13 for on one day saying X and on the next day saying  
14 non-X.

15 Let me say that there are some points on which  
16 we are --

17 QUESTION: Well, what if the only difference  
18 is between the X and the non-X is that there is a  
19 different man making a judgment of the facts?

20 MR. FITZPATRICK: But it's the same statute  
21 and it's the same APA.

22 QUESTION: Same facts, but different views of  
23 the facts. Is that -- can an agency act by saying, we  
24 just changed our mind about what the facts are and the  
25 reason we've changed our mind is they are different

1 minds?

2 MR. FITZPATRICK: No, you can't do that. If  
3 there is -- if the second man comes in and looks at the  
4 facts and can rationally set forth a basis, then that is  
5 defensible. But it is not -- this is not a political  
6 decision that one is dealing with here. This is not a  
7 matter of change of Administrations. This is a question  
8 of whether on this record there is any justification for  
9 scrapping the regulation instead of barring a belt that  
10 doesn't work.

11 QUESTION: You mean Mr. Adams has to prove why  
12 Mr. Coleman was wrong before he can change the program?

13 MR. FITZPATRICK: In the Pacific Legal  
14 Foundation case, it went to the Court of Appeals and the  
15 Court of Appeals looked at his reasons and said they  
16 were defensible reasons for changing course. That same  
17 issue of a different tactic, a different direction,  
18 arose there and the court looked at the decision and  
19 said it was rational and defensible.

20 The Court of Appeals here searched this  
21 record, searched for any basis for the agency to reject  
22 a regulation, to rescind a regulation, when you had  
23 technology that it admitted worked and saved lives. And  
24 it found -- and we would suggest they were absolutely  
25 right -- that that is arbitrary and capricious action

1 under this statute, which was to be technology-forcing.

2 Here the agency didn't even force technology.

3 They didn't even pick the best technology. They had

4 their decision turn on the worst technology. What the

5 agency has done is put the industry back in the driver's

6 seat as far as the pace of safety, and that is directly

7 contrary to the decision of the Congress that said that

8 this is not going to be the industry's ball game as far

9 as deciding when and how safety progress will be made.

10 This is the responsibility of the agency.

11 Now, I would say that there are some points on

12 which we had no disagreement with the Government. I

13 think the Government tried to pick a fight on what were

14 essentially phantom issues in their opening brief.

15 They first said that if this case stands an

16 agency will be frozen in its tracks, uncertainty will

17 never be enough. Well, we have said that an agency that

18 can document or support a finding of uncertainty, of

19 course it can change course.

20 Second, they said that there was a formal

21 burden of proof that this case had imposed on the

22 agency. We did not read it that way at all. Clearly,

23 the burden of proof -- the burden of proof is on a party

24 challenging an agency action, and the court's assertion

25 below that the burden, that the burden, there was a

1 burden of explaining, is not much different again than  
2 what this court had said in Atchison, Topeka, that there  
3 is a presumption that the first decision of the agency  
4 is consistent with the statutory mandate, and if the  
5 agency reverses course there is a duty to explain.

6           We had no difference with the Government.  
7 There was no burden of proof. The Court of Appeals  
8 found, under any standard of judicial -- under any  
9 standard of rational decisionmaking, the decision below  
10 falls.

11           Finally, we asserted that the post-enactment  
12 legislative history doesn't ratchet up the standard of  
13 review. Once again, we did not see that that was how  
14 the Court of Appeals was using that legislative history,  
15 but if there were any question about that we were not  
16 relying upon post-enactment legislative history. We  
17 were relying and do rely on the standards of Overton  
18 Park, which we believe, when you march up the hill or  
19 down the hill, you have to pass muster under the  
20 standards of that case.

21           Parenthetically, we do, in connection with the  
22 colloquy with Justice Stevens, it's clear that the cases  
23 that speak about failure to act at all are a different  
24 genus than the revocation cases. The cases have  
25 consistently given agencies more elbow-room in failure

1 to act than in rescission, or revocation cases.  
2 Consistently the cases, which we've cited in our brief  
3 involving revocation, have held the agency to an  
4 arbitrary and capricious standard.

5 Now, let me make a couple more comments if I  
6 could in connection with the Solicitor's argument.  
7 First, as far as the questions of safety, the key fact  
8 is that at no point has the agency ever found that  
9 non-detachable belts pose any safety problem at all. In  
10 fact, all the evidence is just to the contrary. We have  
11 spelled this out in our briefs.

12 In 1978 the agency concluded that these  
13 non-detachable spool-release belts will not cause  
14 serious occupant egress problems. In 1978 GM, that had  
15 proposed that particular kind of belt, said that those  
16 belts would provide for rapid egress without use of  
17 buckle release mechanisms. And in this very proceeding,  
18 the GM safety director said that spool release is viable  
19 from a safety egress point of view.

20 So there has been no question on this record  
21 at all of support for a problem of egress with a  
22 non-detachable or spool-release belt.

23 In terms of the suggestion that the agency  
24 continues to be committed to a Coleman plan or the  
25 promotion of passive restraints, that as well is totally

1 belied by the record. First, there is the suggestion  
2 that there be an educational effort to convince people.  
3 Paul Newman will step out of his sports car, look you in  
4 the eye, and say, "Buckle up."

5 Well, that program had met with such disfavor  
6 in the Congress that they have denied additional funds  
7 to an educational program until -- that kind of  
8 educational program, until the agency can demonstrate  
9 that it's effective.

10 Second, they said that they've asked for more  
11 money. The Solicitor General notes that the agency has  
12 asked for \$7.5 million of funding for a crashworthiness  
13 program. There is no indication what part, if any  
14 substantial part, is to go to a passive restraint  
15 program.

16 Third, they've suggested that they're going to  
17 have a demonstration program in the Government to put  
18 air bags in the cars. Now, today the only manufacturer  
19 that is going to produce air bags is Mercedes and  
20 they're going to make 5,000 cars, which leads to the  
21 interesting possibility of Government employees running  
22 their errands in \$25,000 and \$30,000 Mercedes  
23 automobiles.

24 There is no other U.S. manufacturer that is  
25 making any kind of passive -- there is no U.S.

1 manufacturer at all that is making any kind of passive  
2 restraint today. Within 24 hours of this decision, as  
3 the Court of Appeals had noted, within 24 hours of this  
4 agency decision, every manufacturer shut down its  
5 passive restraint program. Today you can't get any kind  
6 of passive restraint on any American car and you could  
7 only get it as an option on a VW Rabbit, on a VW Jetta,  
8 or a Toyota Cressida.

9           So the lure that there is something right  
10 around the corner in terms of safety and protection for  
11 our citizens, as suggested by the Solicitor, simply is  
12 belied by the record. Indeed, it's rejected.

13           QUESTION: Is that by the record or by what's  
14 happened since the decision?

15           MR. FITZPATRICK: Well, I think that -- I  
16 think that those facts are all either stated in the  
17 Solicitor General's brief or are matters of the record.

18           QUESTION: What's happened since the  
19 rescission? I thought that's what you were describing.

20           MR. FITZPATRICK: Well, the fact in terms of  
21 the agency shutting down the passive program clearly was  
22 described in the Court of Appeals' decision. The fact  
23 -- the Solicitor's brief speaks of the Mercedes  
24 program.

25           I do not know that my statement about the fact

1 that in 1982 that the only cars that have as an option a  
2 passive belt is contained in the record. I don't think  
3 there's any dispute about that, but I don't think it's  
4 contained in the record.

5 Now, in conclusion let me address one final  
6 point. The Government has in its reply brief attempted  
7 to cast this difference as a rather squalid disagreement  
8 between the automobile industry and the insurance  
9 industry. The Solicitor said: "From the broader  
10 perspectives of the nation as a whole, the decision is  
11 sound and responsible."

12 That approach we think is dead wrong. But if  
13 it were proper to look at this case from the broader  
14 perspectives of the nation as a whole, then I ask the  
15 Court to lay aside our brief and lay aside Mr. Cutler's  
16 brief, and look to the brief of the Epilepsy Foundation  
17 of America and the National Society to Prevent Blindness  
18 or the brief of the Mothers Against Drunk Driving or the  
19 Brief of the American College of Preventative Medicine  
20 or the American Academy of Pediatrics, to see where, in  
21 the Solicitor's terms, from the broader perspective of  
22 the nation as a whole, the responsible action lies.

23 Mr. Chief Justice, we believe that, for the  
24 reasons we have advanced today and in our briefs, the  
25 decision of the agency rescinding this important and

1 significant regulation to protect the lives of our  
2 citizens, that rescission was arbitrary and capricious  
3 and was properly set aside. We'd urge that the judgment  
4 of the Court of Appeals be affirmed and promptly so.

5 We thank the Court.

6 CHIEF JUSTICE BURGER: Mr. Solicitor General,  
7 you have four minutes remaining.

8 REBUTTAL ARGUMENT OF REX E. LEE, ESQ.,  
9 ON BEHALF OF PETITIONER

10 U.S. DEPARTMENT OF TRANSPORTATION

11 MR. LEE: I think if there's anything that  
12 ought to be clear after Mr. Fitzpatrick's argument, it  
13 is that we are dealing in an area of uncertainty, an  
14 area that ought to be left to the particular abilities  
15 and expertise of the administrative agency.

16 Indeed, I am now uncertain, not only as to  
17 what is the best long-range solution, over which 17  
18 years' worth of Transportation Secretaries have  
19 struggled; I am also uncertain even as to what Mr.  
20 Fitzpatrick's position is.

21 I heard on the one hand that the agency whom I  
22 represent had found that automatic belts do work,  
23 because of the fact that hundreds of thousands -- there  
24 have been hundreds of thousands of automobiles that had  
25 effective passive belts, and that it had increased usage

1 by 40 percent.

2           What he neglected to tell you was that the  
3 overwhelming majority of those automobiles had their  
4 detachable belts guarded by ignition interlocks. The  
5 surprising thing about those data is that the figure was  
6 not much higher than 40 percent, because unless the  
7 devices have been tampered with you can't even start  
8 your automobile unless those seat belts are buckled.

9           We were then told that what the agency should  
10 have done was to rule out a belt that doesn't work, then  
11 conceding that in fact this was a belt that didn't  
12 work. But that in fact is exactly what Secretary Lewis  
13 did, and that's all he did, was to rule out a belt that  
14 didn't work.

15           The standard that we urge in this case that  
16 should be adopted is whether the Secretary could  
17 rationally conclude that there was sufficient  
18 uncertainty to justify his not going forward with the  
19 procedure that wouldn't work.

20           QUESTION: Mr. Solicitor General, let me  
21 interrupt you about the belt that didn't work. Isn't  
22 that on the assumption that the belt will be detached  
23 just as often as an active belt will not be hooked up in  
24 the first instance?

25           MR. LEE: That is correct.

1 QUESTION: And did the agency even consider  
2 the extent to which the belt would be detached as  
3 compared with the extent to which people will hook up  
4 the belt in the first place?

5 MR. LEE: It considered --

6 QUESTION: I didn't find it in their report.

7 MR. LEE: It considered it to this extent,  
8 Justice Stevens. It came up to the point that it found  
9 that there were no reliable data that indicated one way  
10 or the other, so that it was left with the circumstance  
11 exactly as Secretary Coleman had, that you have to make  
12 your best judgment.

13 QUESTION: Just as a matter of common sense,  
14 isn't it perfectly clear that there will be greater seat  
15 belt usage if the belt is automatically attached and you  
16 have to do something affirmative to detach it, as  
17 opposed to the active belt? Isn't that perfectly  
18 obvious?

19 MR. LEE: There are two things that are  
20 perfectly obvious. One is --

21 QUESTION: Well, is that one of them?

22 (Laughter.)

23 MR. LEE: That is one of them, that there will  
24 be some increase.

25 But the second thing is --

1           QUESTION: And if you just get one percent  
2 increase, you save over 100 lives a year.

3           MR. LEE: If you get one percent increase, you  
4 may or may not save, you may or may not save lives a  
5 year, because you also have to take into account the  
6 additional cost and the impact on public reaction that  
7 results from the public perception of ineffective  
8 regulation which leads to a more expensive example of  
9 federal requirements.

10           This matter of the defeat rate, the problem of  
11 the individual regarding the device that is in his  
12 automobile as an enemy and finding some way to defeat  
13 it, to cut it out, as obviously happened with these VW  
14 belts and as obviously happened with the ignition  
15 interlocks, is a very real problem, must be taken into  
16 account.

17           And that, once again, is part of this  
18 uncertainty with which the agency has to deal. It did  
19 give its reasons. It did explain. This is not an  
20 Atchison, Topeka and Santa Fe Railroad case, in which  
21 there were no reasons that were given.

22           Now, Justice White asked the question, isn't  
23 this just a matter -- what if you had the same facts but  
24 a different reviewer of facts? That's exactly what you  
25 had with Secretary Coleman and Secretary Adams.

1                   We submit this judgment should be reversed.

2                   CHIEF JUSTICE BURGER: Thank you, gentlemen.

3   The case is submitted.

4                   (Whereupon, at 11:05 a.m., the case in the  
5   above-entitled matter was submitted.)
