6 v. : No. 82-1031

7 EDWIN G. HYDE :

8 - - - - -x

9 Washington, D.C.

10 Wednesday, November 2, 1983

11 The above-entitled matter came on for oral
12 argument before the Supreme Court of the United States
13 at 12:59 p.m.

14 APPEARANCES:

15 FRANK, H. EASTERBROOK, ESQ., Chicago, Ill.; on behalf of
16 the Petitioners.

17 JERROLD J. GANZFRIED, ESQ., Office of the Solicitor
18 General, Department of Justice, Washington, D.C.; on
19 behalf of the United States as amicus curiae.

20 JOHN M. LANDIS, ESQ., New Orleans, Louisiana; on behalf
21 of the Respondent

2 CHIEF JUSTICE BURGER: We will hear arguments
3 next in Jefferson Parish Hospital District v. Hyde.

4 Mr. Easterbrook, you may proceed whenever you
5 are ready.

6 ORAL ARGUMENT OF FRANK H. EASTERBROOK, ESQ.,

7 ON BEHALF OF THE PETITIONERS

8 MR. EASTERBROOK: Mr. Chief Justice, and may
9 it please the Court:

10 The question in this case is whether an
11 arrangement by which a hospital obtains full-time
12 services of four anesthesiologists in exchange for a
13 promise not to admit others to practice there is a tying
14 unlawful per se under the Sherman Act.

15 The first contract was signed in 1971 when
16 East Jefferson General Hospital opened. Dr. Roux
17 pledged to work full time in the hospital for a year.

18 The hospital pledged to give him all of the
19 hospital business. The contract also called for Dr.
20 Roux to hire, fire, supervise and train the nurse
21 anesthetists at the hospital and to run the hospital's
22 department of anesthesia.

23 The contract was extended year by year until
24 1976 when a new five-year agreement was signed. By the
25 time of trial Roux and Associations, four

1 anesthesiologists, were supervising 14 operating rooms.
2 Respondent attacked this arrangement as a tying because
3 a patient could not use the hospital's operating rooms
4 without taking one of the hospital's anesthesiologists.

5 After a trial the District Court held for the
6 hospital. The Court concluded that the hospital faced
7 competition from many other local hospitals and could
8 not charge a monopoly premium for its services without
9 driving patients away plus it found no market power or
10 any other source of dominance, and it held that under
11 the rule of reason the contract is pro-competitive,
12 beneficial and lawful.

13 The Fifth Circuit reversed. It found that
14 operating rooms and anesthesia are separate products,
15 and then it concluded that although the market is not
16 concentrated and although under traditional standards of
17 market power -- There would be none in this case -- the
18 arrangement nonetheless was unlawful per se because of
19 generic imperfections in the market for medical
20 services.

21 The Court of Appeals observed that many
22 patients are insured. Many patients would like to use
23 hospitals near their home and that there is a lack of
24 perfect information in the market.

25 Consequently according to the Court of Appeals

1 the hospital had market power and the per se rule
2 against tyings applied. When the Court turned to the
3 hospital's arguments about pro-competitive benefits from
4 this arrangement, the Court of Appeals simply observed
5 that because the per se rule had been invoked these
6 benefits could be considered only if this contract was
7 the least restrictive alternative to arrange them, and
8 the Court held that it was not.

9 The arguments we make in our brief about this
10 subject really boil down to three: no tie, no market
11 power and no enhancement of market power. I would like
12 to take them up in that order.

13 Our basic proposition is that an arrangement
14 such as this is best analyzed as an exclusive dealing or
15 employment contract and not as a tying. To understand
16 this you can think of a continuum by which hospital
17 services can be arranged.

18 At one end of that continuum is the perfectly
19 open hospital in which all qualified professionals may
20 practice. If 8 anesthesiologists or 14
21 anesthesiologists want to practice in East Jefferson
22 General Hospital they may do so, and if there are more
23 anesthesiologists who want to work there and there is
24 work to be had they will all work part time. That
25 clearly would be lawful.

1 Many hospitals are operated in exactly that
2 way. At the other end is group practice of medicine
3 similar to the group health association here in the
4 District of Columbia.

5 Such a group practice is closed on all sides.
6 All physicians are under full-time contract. All
7 medical services are sold as a package. One cannot get
8 the podiatrist of the group health association without
9 taking its dermatologist, its internal medicine man and
10 its radiologist.

11 The only choice a patient has when medicine is
12 practiced as a group is to go with that group or to seek
13 medical care elsewhere. That, too, would be lawful we
14 should think.

15 The Court indicated as much in Maricopa. That
16 is a plain partnership in which people cooperate to
17 produce a product.

18 QUESTION: You do not think this arrangement
19 resembles that?

20 MR. EASTERBROOK: We think this arrangement
21 resembles each of these arrangements in part. This
22 hospital is organized in both of those ways.

23 Some of the departments at this hospital are
24 organized like the closed panel practice. The
25 anesthesiology department is so organized.

1 Radiology is so organized. Cardiology,
2 nursing services and many other services this hospital
3 provides are organized in that way.

4 Other services that this hospital provides
5 like internal medicine are organized in the first way, a
6 way in which each physician can participate in any
7 particular case.

8 QUESTION: May I ask you about your group
9 practice example? Supposing they include a dentist and
10 they had all the dentists in Washington in that
11 particular group arrangement and they said you cannot
12 get your teeth fixed unless you take all your other
13 services from our group practice association.

14 MR. EASTERBROOK: Justice Stevens, I would be
15 very surprised if we would be able to see such an
16 arrangement --

17 QUESTION: I understand.

18 MR. EASTERBROOK: -- because if they attempted
19 to charge a monopoly price it would be highly
20 advantageous for some dentist to go out and set up a
21 practice and collect it. But if in fact one did not say
22 Washington but one said this is a very small town in
23 which there is only one dentist --

24 QUESTION: I am assuming Washington in my
25 example.

1 MR. EASTERBROOK: Yes.

2 QUESTION: I would like you to answer my
3 example assuming Washington.

4 MR. EASTERBROOK: I think there is an
5 anti-trust problem in that case, Justice Stevens.

6 QUESTION: You mean a monopoly of dentistry
7 and then the -- But what if they --

8 MR. EASTERBROOK: Not unless -- Let me qualify
9 it, Justice Stevens. I think there would be a problem
10 if the dentists or if this association did anything
11 which had the effect of excluding others from setting up
12 competing organizations, but if all you see is that one
13 organization whether it be a very large supermarket or
14 whether it be a very large medical organization provides
15 the services in one town that seems not troublesome so
16 long as it does not exclude competition by others.

17 QUESTION: Well, of course, the issue would be
18 whether it did. They would only perform dentistry if
19 the patient agreed to have all other medical work done
20 by the association. That is the hypothesis.

21 You say that would be perfectly all right?

22 MR. EASTERBROOK: I think that would be
23 perfectly lawful, but one need not reach any such
24 proposition in order to understand this case.

25 I think if all you did was look in on one town

1 and find all you could see practicing -- There was one
2 health maintenance organization of two internal medicine
3 specialists, one cardiologist and so on -- that the fact
4 that there was just one group practice of medicine in
5 say Charlottesville, Virginia would not make that group
6 practice of medicine unlawful.

7 QUESTION: Does our opinion in Goldfarb have
8 any implications here directly or indirectly? As you
9 remember all of the lawyers in Northern Virginia at
10 least got together and agreed on a fixed price and would
11 not perform any services for clients except at that
12 price.

13 MR. EASTERBROOK: What distinguished Goldfarb
14 and Maricopa on the one hand, Your Honor, from Broadcast
15 Music and this case on the other is that in Goldfarb
16 that was no intergration of any sort. It was just a
17 naked price fixing agreement.

18 Those lawyers did not cooperate in any way in
19 the provisions of services except to fix their prices.

20 QUESTION: They cooperated to the extent they
21 all agreed to the same prices. That is a pretty good
22 cooperation is it not?

23 MR. EASTERBROOK: Exactly. But that is all
24 they did. They did nothing but fix the price. In
25 Broadcast Music --

1 QUESTION: Well, they did more than that.
2 They refused to perform a service for anyone who would
3 meet the price which is closely related, of course.

4 MR. EASTERBROOK: Yes.

5 On the other hand in Broadcast Music the
6 people who got together and furnished the blanket
7 license were cooperating in the creation of a new
8 project. They were behaving exactly as partners in a
9 business venture, and similarly the physicians who get
10 together in a hospital together with the nurses and
11 others are participating in one business venture which
12 competes against other business ventures.

13 It is true that they participate as partners,
14 charge a price and each of them takes his share of that
15 income. But that is exactly the same way a large law
16 firm practices that one cannot get a part-time job, for
17 example, at a large law firm in the District of Columbia
18 and work part-time at another law firm in the District
19 of Columbia.

20 An arrangement by which Covington and Burling
21 says you cannot be part-time at Covington and part-time
22 at Wilmer, Cutler and Pickering would not be thought to
23 be a violation of the anti-trust laws.

24 That in fact is what the hospital has done
25 here. It has said to these anesthesiologists you cannot

1 spend half of your time with our patients or part of
2 your time with our patients and part of your time with
3 the patients of someone else somewhere else. We want
4 your full attention to our patients full time.

5 That I think is just a perfectly ordinary
6 business decision quite apart from a naked cartel. In
7 fact, on the question whether you can think of this as a
8 tying I think the initial question has to be how the
9 patients would perceive what it is they are buying.

10 Do they perceive two separate products which
11 they are being forced to buy even though they would
12 prefer to buy only one of them?

13 QUESTION: Mr. Easterbrook, what you are
14 discussing now I take it are largely matters of fact.
15 Did the District Court make findings in many of these
16 areas that the Court of Appeals upset them on a
17 thoroughly erroneous basis?

18 What is the factual state of this particular
19 point you are making? How do patients see the
20 furnishing of anesthesiologists?

21 MR. EASTERBROOK: The District Court made no
22 findings of fact on this other than to observe that
23 anesthesiology is ordinarily procured through a
24 surgeon. That is --

25 QUESTION: How did the District Court know

1 that?

2 MR. EASTERBROOK: There was testimony in the
3 record from at least four witnesses, anesthesiologists
4 and one internal medicine specialist, who testified that
5 that is the way in which anesthesia is ordinarily
6 procured.

7 Dr. Hyde testified and agreed that that is the
8 way it is ordinarily procured although he testified that
9 because his specialty is obstetric anesthesiology that
10 he has some patients who remembered him and would like
11 to be served by him. He agreed that --

12 QUESTION: So there was factual --

13 MR. EASTERBROOK: Right. But he agreed that
14 in the run of cases patients contract for surgery with a
15 surgeon and rely on the surgeon to procure an
16 anesthesiologist. The Court of Appeals on the other
17 hand without finding any conclusion of the District
18 Court clearly erroneous or indeed not citing anything in
19 the record simply stated that anesthesiology and
20 operating rooms are separate products which should be
21 obtainable separately.

22 So far as I know it had no part of the record
23 in mind when it made that statement.

24 QUESTION: Or any hospital but this one,
25 especially a hospital that had hired anesthesiologists.

1 MR. EASTERBROOK: Yes, Your Honor. I have no
2 idea what it had in mind at all.

3 From the point of view of the buyer, however,
4 what the buyer wants to obtain in most cases is an
5 operation. He would like his tonsils taken out if that
6 is the operation he has in mind or perhaps open heart
7 surgery.

8 His interest is in having that particular
9 amount of medical care. It is certainly the case that
10 this is most unlike the traditional tying case of say
11 when IBM sells its tabulating machine. Someone then
12 goes into the market, wants to procure tabulating cards
13 to run through the machine and puts together two
14 products at some later date.

15 It is just nothing that is put together at one
16 later date in order to make an operation. The operation
17 --

18 QUESTION: Does the hospital in this case
19 separately bill the anesthesiologists?

20 MR. EASTERBROOK: It does. The hospital
21 during the time of the trial in this case --
22 Circumstances have changed slightly since, but the
23 patient's bill would contain a separate line item for
24 all anesthesia services.

25 QUESTION: What other line items?

1 MR. EASTERBROOK: Blood, drugs, television
2 sets in their room. Every particular medical service
3 would be separately billed, and the reasons for that is
4 to reflect what has been done for this patient. If
5 someone went into East Jefferson General Hospital and
6 never had an operation he would not be billed for
7 anesthesiology.

8 If he went, for example, into traction for a
9 back problem no anesthesia charge would appear on the
10 bill. The hospital is attempting to charge for those
11 aspects of its complete spectrum of medical care that
12 are provided to a patient.

13 QUESTION: What does that figure for
14 anesthesiology cover? Does it cover the service or how
15 about materials that are used?

16 MR. EASTERBROOK: At the time of the trial in
17 this case, Your Honor, there were two charges that
18 appeared, one of which would cover all of the equipment
19 and all of the professional services whether by an
20 anesthesiologist or a nurse anesthetist and the other
21 which would cover drugs only.

22 As I understand the current arrangements there
23 are now three charges, one for the professional services
24 of the anesthesiologists and the nurse anesthetists, a
25 separate charge for equipment and general access to

1 anesthesia, and a third charge for drugs.

2 QUESTION: What about the anesthesia itself?

3 MR. EASTERBROOK: That is included under
4 drugs.

5 QUESTION: That is under drugs?

6 MR. EASTERBROOK: Yes.

7 QUESTION: No one suggested that that is a
8 separate product I do not suppose.

9 MR. EASTERBROOK: Not in this case, and I hope
10 no one would no more for that matter than one would
11 argue that you have a right to your own supplier of food
12 or linens in the hospital also things for which you are
13 apt to see charges appear on one's bill. You go into a
14 hospital. You take their linen service. You take their
15 food service. You take their nurses.

16 All of those may appear as separate items, but
17 I would hope that they are not all one gigantic
18 anti-trust conspiracy.

19 QUESTION: Mr. Easterbrook, does the billing
20 procedure whereby they split the anesthesia bill as I
21 understand it apply to all three of those items? I mean
22 is the procedure by which the anesthesiologists and the
23 hospital share the payment for those items the same?

24 MR. EASTERBROOK: The procedure at the time of
25 the trial in this case, Your Honor -- Again, I am

1 distinguishing because it has changed slightly since --
2 is that drugs would be put to one side of the bill for
3 professional services, equipment and so on.

4 Eight percent would be deducted for charity
5 and bad debts, and the remainder, 92 percent of the
6 original bill, would be divided 50/50 between the
7 hospital which would cover space, equipment, their
8 training and overhead and the anesthesiologists.

9 QUESTION: That 50 percent would cover the
10 anesthesiologists, too, because they are paid by the
11 hospital.

12 MR. EASTERBROOK: No, the 50 percent retained
13 by the hospital at that time would cover the nurse
14 anesthesiologists, and the other 50 percent separation would
15 cover the M.D. anesthesiologists. The way the billing
16 is now done currently --

17 QUESTION: Mr. Easterbrook, is it your view
18 that the product here is a surgical service?

19 MR. EASTERBROOK: It is, Your Honor.

20 QUESTION: What does that embrace?

21 MR. EASTERBROOK: I am sorry. I did not
22 hear.

23 QUESTION: What does the surgical service
24 embrace within the concept of the product at issue?

25 MR. EASTERBROOK: It embraces in the context

1 of hospital service essentially everything from when one
2 enters the hospital and has laboratory services
3 performed, obtains space in the operating room, has the
4 operation performed by the internal medicine
5 specialists. The surgeon will be attended at that
6 operation by a large number of nurses, scrub nurses,
7 surgical nurses, all of whom are employees of the
8 hospital. He will then be wheeled into a recovery room,
9 provided recovery room services again by full-time
10 employees of the hospital and some M.D.s and is finally
11 sent to his room and after that discharged.

12 That whole package of services is we think one
13 product, and it is not appropriate to attempt to
14 disentangle further and to require separate suppliers to
15 be available for those separate products.

16 QUESTION: Are radiologists also included?

17 MR. EASTERBROOK: Oh, yes, Your Honor. The
18 radiologist, the pathologist, all of the laboratory work
19 as well.

20 QUESTION: How about the surgeon?

21 MR. EASTERBROOK: So far as the question
22 whether it is a single product for anti-trust purposes
23 is concerned we think the surgeon is also part of that
24 package. Again, I think I have to go back to what I
25 said at the beginning that one can put together medical

1 services in many ways and many hospitals do.

2 Some hospitals are completely open staff right
3 from the beginning, that is, that there are separate
4 surgeons, separate anesthesiologists, separate
5 radiologists, separate pathologists and all of them act
6 as independent contractors. There is certainly nothing
7 in the anti-trust laws that prohibit hospitals from
8 doing that.

9 On the other hand, we would think there is
10 nothing in the anti-trust laws that prohibits the
11 hospital from selling them as a service. In fact, these
12 different ways of assembling a medical product are just
13 the forms of competition in this market.

14 QUESTION: How did you say the radiologist is
15 furnished here?

16 MR. EASTERBROOK: In East Jefferson the
17 radiologist is under full-time exclusive contract to the
18 hospital.

19 QUESTION: He is not an employee?

20 MR. EASTERBROOK: No. He is not an employee.

21 QUESTION: He is like the anesthesiologist.

22 MR. EASTERBROOK: He is like the
23 anesthesiologist although not like the nurse although
24 one of the points we --

25 QUESTION: How about the surgeon?

1 MR. EASTERBROOK: If the surgeon is a
2 cardiologist the surgeon will be under full-time
3 exclusive contract to the hospital. Cardiology is
4 closed.

5 QUESTION: And one who needs his service has
6 to take him?

7 MR. EASTERBROOK: If he wants to go to East
8 Jefferson General Hospital. He has, of course, quite a
9 large number of other hospitals to go to, and that is
10 our market power point, Your Honor, that assuming this
11 is best analyzed as a tying the per se rule still does
12 not apply unless there is market power.

13 We think there are several problems in the
14 market power holding of the Court of Appeals in this
15 case. The first is that under Fortner it is not
16 evidence of market power simply to sell two products in
17 a package.

18 As Fortner said it is possible to sell -

19 QUESTION: Is this argument related to your
20 argument about no market power?

21 MR. EASTERBROOK: Yes.

22 QUESTION: Your second argument?

23 MR. EASTERBROOK: Second argument that there
24 is no market power.

25 As Fortner said it is possible to have cheap

1 credit and sell expensive houses, and that is not a
2 question of market power. What you would look for the
3 Court said in Fortner is some elevation of the package
4 price.

5 It is undisputed in this record that no one at
6 trial testified that this arrangement raised the package
7 price of operating rooms and anesthesiology. The
8 executive director of the hospital testified to the
9 contrary that this had reduced the package price and
10 there was no contrary evidence of any sort. Nor did the
11 Court of Appeals suggest that this had raised the
12 package price of the anesthesiology-operating room
13 package.

14 So we suggest that under the first and most
15 narrow interpretation of Fortner II there is no market
16 power in this case.

17 The second reason why we have argued that
18 there is no market power in this case is because the
19 market is properly characterized as one of anesthesia
20 services. The hospital is acquiring anesthesia services
21 to put into this package of surgery and medical care by
22 looking throughout the nation.

23 The anesthesiologists who have ended up in New
24 Orleans came in one case from Minnesota and another case
25 from Florida and another case from California, and it

1 again is undisputed in this record that there is
2 nationwide movement of anesthesiologists. That means
3 that both for what the hospital is doing the hospital
4 can turn to the nation as a whole to hire its employees
5 or acquire its exclusive contracts and similarly the
6 anesthesiologists can turn to the nation as a whole,
7 that is, those who believe the competitive opportunities
8 in New Orleans are not what they might be, can easily go
9 to Florida.

10 As Dr. Adriani, Respondent's specialist
11 expert, testified in this case anesthesiologists are
12 like nomads, and they are like nomads precisely because
13 they lack patient contact, that they are brought into a
14 case by a surgeon as part of the hospital's package
15 rather than on the basis of individual contacts with
16 patients.

17 Ultimately our argument in this case is that
18 this contract is best understood as a means of
19 organizing that nationwide competition to the benefit of
20 patients. Exclusive contracts are a method by which
21 hospitals can set anesthesiologists to bidding against
22 one another for the position.

23 In fact --

24 QUESTION: Is there any impact of insurance in
25 this respect?

1 MR. EASTERBROOK: Not on the competition for
2 the position at hospitals, Your Honor. There is
3 absolutely none, and that is one reason why we think the
4 Fifth Circuit was mistaken in believing that there is
5 something special about medicine. No impact
6 whatsoever.

7 Dr. Hyde was asked at one point in the trial
8 why he did not have or did not want an exclusive
9 contract, and his answer was at page 76 of the
10 transcript of the second day and I quote "That gets to
11 practice by the lowest bidder, and I think that is not
12 our intent in the practice of medicine".

13 Well, I can understand the argument that the
14 anti-trust laws do not require practice by the lower
15 bidder, but the argument that they prohibit practice by
16 the lowest bidder is nothing short of flabbergasting.

17 Thanks very much.

18 CHIEF JUSTICE BURGER: Mr. Ganzfried.

19 ORAL ARGUMENT OF JERROLD J. GANZFRIED, ESQ.,
20 ON BEHALF OF THE UNITED STATES AS AMICUS CURIAE

21 MR. GANZFRIED: Mr. Chief Justice, and may it
22 please the Court:

23 The United States contends that the Court of
24 Appeals incorrectly found that the hospital's exclusive
25 dealing contract was an illegal tying. This decision

1 should be reversed not only because of its adverse
2 impact of the health care industry but also because it
3 distorts important principles of anti-trust law that are
4 of more general application to other segments of the
5 economy.

6 In our view the primary flaw in the Court of
7 Appeals' opinion is its fixation on labels rather than
8 substance. We start from the premise stated in
9 Times-Picayune and reiterated in Sylvania that
10 competitive realities and substance must dominate
11 anti-trust analysis.

12 With this guiding principle in mind I would
13 like to turn to the tying cases decided by this Court
14 deciding with the Motion Pictures Patent case which was
15 not cited in our brief but which is reported in Volume
16 243 of the U.S. Reports.

17 What emerges from this case, the Motion
18 Picture Patents through Fortner II in 1977 is this:
19 That concern with tying arrangements flows from the
20 potential transfer of economic power from one market
21 into a second market.

22 Ultimately the concern is that two independent
23 monopolies will be created. Now it is common ground
24 that we do not have to wait until that result occurs
25 before action can be taken so the task is to predict

1 when there is a possibility or a substantial threat that
2 such economic harm will result.

3 Now as it happens the concept of a tying is
4 not easily defined because any sale of a multi-component
5 product or service is susceptible of being called a
6 tying even where the bundling of components in a single
7 package is pro-competitive, produces efficiencies or is
8 done for a legitimate business reason. This has led to
9 a good deal of confusion because if the line is drawn
10 too mechanically as we believe it was in this case then
11 these pro-competitive benefits will be lost even when
12 there is little or no danger of competitive harm.

13 QUESTION: May I interrupt to ask just one
14 question?

15 MR. GANZFRIED: Surely.

16 QUESTION: I guess you are arguing now there
17 is no tie which is Mr. Easterbrook's first position.

18 MR. GANZFRIED: That is the first point.

19 QUESTION: He also argues there is no market
20 power and thirdly there is no enhancement of market
21 power. Do you support all three of those contentions?

22 MR. GANZFRIED: We do although on one of his
23 arguments on market power we take no position, that is,
24 that the appropriate market is the national market for
25 purchasing services of anesthesiologists.

1 Now in following this through the Court has
2 recognized that not all package sales are illegal. For
3 example, Times-Picayune --

4 QUESTION: Are you going to suggest how we
5 should make this distinction?

6 MR. GANZFRIED: As to which are and which are
7 not --

8 QUESTION: The tying which is a package deal.

9 MR. GANZFRIED: I believe I will and that is
10 this: that ultimately the concern with tyings is that
11 you have power in one separate market that you can
12 transfer to a second market. In order to do this first
13 you have to --

14 QUESTION: Are you suggesting this is
15 essential before we can have a tying?

16 MR. GANZFRIED: That is right. That is
17 right.

18 First, you have to define the relevant market
19 for the tying product and then determine whether there
20 is substantial market power in that market because if
21 there is none then you have no power to transfer
22 elsewhere. You have no leverage that you can exert into
23 a second market.

24 QUESTION: Why is that not true here?

25 MR. GANZFRIED: Well, it is not true here for

1 several reasons, first, because we do not believe there
2 is a second market. There is one market. There is one
3 product.

4 There is a package that has been put together
5 by the hospital that should be viewed as the exclusive
6 dealing arrangement that it is.

7 QUESTION: Well, if you are not right about
8 that then you have a couple of much harder arguments I
9 take it.

10 MR. GANZFRIED: Well, I have other arguments.
11 I do not know that they are necessarily much harder.

12 The next is that even if there are two
13 products here and two markets, the hospital does not
14 have market power in the market for the tying product
15 which is surgical facilities. The findings of the
16 District Court as to the absence of market power in that
17 market appear to be supported by the record.

18 The Court of Appeals did not find the District
19 Court's conclusions as to market power to be clearly
20 erroneous and so we support them. What the Court of
21 Appeals did was to recognize that under the traditional
22 analysis set down by this Court this case is fairly
23 easily decided, and that is that the hospital lacks
24 sufficient market power in the market for the tying
25 product.

1 But because it viewed certain so-called market
2 imperfections that Mr. Easterbrook has referred to it
3 decided to ignore what it recognized was the traditional
4 analysis and the analysis that was required in the
5 case. I think the point I would like to get to is that
6 the ease with which the Court of Appeals could under the
7 guise of following accepted tying doctrine as it has
8 been set down by this Court and how it could reach the
9 result that it did which in our view savages an
10 important notion of anti-trust law indicates that
11 perhaps some tightening up of the definition is in order.

12 What we propose and is described in more
13 detail in our brief is this: that the only time that
14 there is a real concern, a real threat that market power
15 in the first market is going to be transferred and used
16 in a second market is where there is ability to acquire
17 substantial market power in that second market.

18 I would like to give an illustration. Suppose
19 that a company has a dominant position in the market for
20 rubber stamps for making documents, and it requires that
21 all people who buy its rubber stamps also buy ink.

22 Now we are assuming that there is power in the
23 rubber stamp market in this, but in this instance there
24 is no chance that that power could be transferred to the
25 ink market. The reason is that the portion of the ink

1 market that is used in conjunction with the rubber stamp
2 market is miniscule.

3 It is so small in fact that a company could
4 not use this tying to obtain power in the ink market.

5 QUESTION: May I give you a hypothetical and
6 ask you how your approach would treat it? Supposing
7 that in this case the record showed -- I do not suppose
8 it does -- that there is an effective competitive
9 ceiling on what the hospital can charge for its service,
10 but the anesthesiologists are able to charge more and
11 that the hospital wants an exclusive dealing arrangement
12 so that they can split the fees of the anesthesiologists
13 and get part of the return that the anesthesiologists
14 get and, therefore, enhance the price of the hospital
15 service.

16 Would you say that made it bad or not if that
17 is what the record showed?

18 MR. GANZFRIED: Well, if I can just get one
19 thing clarified and that is whether the ceiling on the
20 price that the hospital can charge --

21 QUESTION: The market.

22 MR. GANZFRIED: Market ceiling.

23 QUESTION: Just a market ceiling. Insurance
24 companies make it practical to charge more, but they in
25 effect obeyed that ceiling by getting a part of the

1 return that the anesthesiologists are able to get.

2 MR. GANZFRIED: Would that be bad, and the
3 answer to that is possibly yes but it is something that
4 should be analyzed under the rule of reason. In a
5 particular circumstance it might be, but it does not
6 warrant per se prohibition.

7 QUESTION: Well, if it does not does the
8 record in this case tell us whether or not that is what
9 happened here?

10 MR. GANZFRIED: As I understand the record it
11 does not.

12 QUESTION: It does not really tell us, does
13 it?

14 MR. GANZFRIED: No. In fact what the record
15 does tell us --

16 QUESTION: Does it tell us why they have this
17 exclusive arrangement?

18 MR. GANZFRIED: Yes. The reason is --

19 QUESTION: Because the doctors did not want
20 it.

21 MR. GANZFRIED: We believe the reason is that
22 when the hospital was opened in 1971 there was some
23 concern that when --

24 QUESTION: As I understand the doctor
25 testified he did not want the exclusive arrangement but

1 nevertheless the hospital insisted on it.

2 MR. GANZFRIED: He said that in 1976 he did
3 not want it to be exclusive. His group had been the
4 target of some claims of unethical practice for having
5 entered into this exclusive contract.

6 QUESTION: If it is the hospital that wants it
7 what are we to infer is the reason for the arrangement?

8 MR. GANZFRIED: I do not think that you need
9 to infer. I think you can just look directly to the
10 findings of fact in the District Court as to what the
11 advantages of the arrangement were, and they are recited
12 at pages 32 and 33 of the appendix to the petition.

13 Now the point that I would like to conclude
14 with, and I think it is the area in which our submission
15 may be construed as moving a bit beyond the cases, and
16 that is the notion of requirement of substantial market
17 power in the tied market. I would like to point out why
18 in fact it is not such an extension.

19 That is because the focus on whether a tying
20 may promote substantial independent power in the tied
21 market conforms to economic reality and has been noted
22 in this Court's decisions. Going back to the Motion
23 Picture Patents case the concern was with the effect on
24 competition in this tied market has been made quite
25 clear.

1 In that case the Court observed that the evil
2 in tying the use of the patented projector to the films
3 was that it allowed the company to fix the price of
4 films as effectively as it could fix the price on the
5 tying patented projector. That concern has been
6 followed through in more recent cases that are referred
7 to in the brief.

8 Thank you.

9 CHIEF JUSTICE BURGER: Mr. Landis.

10 ORAL ARGUMENT OF JOHN M. LANDIS, ESQ.,
11 ON BEHALF OF THE RESPONDENT

12 MR. LANDIS: Mr. Chief Justice, and may it
13 please the Court:

14 As the Petitioners point out in their reply
15 brief our perspective in this case is quite different
16 than theirs. Whereas the Petitioners suggestion in this
17 case will decide the legality of all exclusive contracts
18 at all hospitals we do not.

19 We believe that this case concerns one
20 particular contract at one particular hospital, and that
21 contract has got to be judged under the particular
22 market and competitive conditions that are reflected in
23 the record of this case. Whereas the Petitioners ask
24 the Court to decide this case by making certain
25 assumptions regarding those competitive conditions and

1 regarding those market conditions, we do not.

2 We submit that this case -- We submit that
3 when the Petitioners' assumptions are compared with the
4 record of this case they just do not stand up. I would
5 like to discuss two crucial assumptions that the
6 Petitioners' arguments are based on.

7 Perhaps the most important assumption is that
8 the Petitioners asked the Court to assume that there is
9 no competition among anesthesiologists to begin with,
10 and this is obviously an important assumption because if
11 it is correct the Petitioner should win the case. After
12 all, if there is no competition to begin with then it
13 would be hard to argue that a tying arrangement
14 restrains competition.

15 However, we submit the argument that that
16 assumption is not correct. The record indicates that
17 anesthesiologists can and do compete against each other
18 for patients' business when they are able to, when they
19 are permitted to.

20 The basis of the Petitioners' argument or
21 their assumption that there is no competition is their
22 view of the market structure in the health care
23 industry. They contend that patients purchase medical
24 care regardless of the kind, regardless of the nature
25 from hospitals rather than from doctors.

1 According to the Petitioners patients simply
2 present themselves at the door of the hospital and ask
3 for medical treatment, and they really have no greater
4 interest in who performs surgery on them or who more
5 directly in this case who puts them to sleep for that
6 surgery than they would as to who supplies the
7 thermometer that is given to them in the hospital.

8 QUESTION: As a practical matter, is it not
9 very likely that the attending physician of the patient
10 has referred him to this place the way a solicitor in
11 England refers cases to barristers? Is that not very
12 likely the way it happens here?

13 MR. LANDIS: Yes, sir.

14 QUESTION: People just do not find a hospital
15 the way they find a supermarket.

16 MR. LANDIS: In the majority of cases the
17 anesthesiologist would be selected by the surgeon, not
18 by the patient. Now there are a few cases in which the
19 patient may select the anesthesiologist, but the
20 important point is the patient delegates that decision
21 to the surgeon, and under the kind of contract that we
22 have at issue here the surgeon has no more choice, no
23 more freedom of choice, no more discretion than would be
24 the patient.

25 QUESTION: Well, is it true that the patient

1 has to take the surgeon the hospital provides?

2 MR. LANDIS: The --

3 QUESTION: The patient has to take the surgeon
4 the hospital provides.

5 MR. LANDIS: Initially -- That is another
6 point which we disagree with the Petitioners. Patients
7 do not come to hospitals for surgery. They go see their
8 surgeon initially I am sure in the vast majority of
9 cases outside the hospital.

10 In fact, that is what the record reflects in
11 this case. If the decision is made that the patient
12 requires surgery the surgeon will admit the patient to a
13 hospital, and that hospital as the record reflects is
14 likely to be the one closest to the surgeon's office,
15 likely to be the one closest to the patient's home.

16 But it is one at which the surgeon has
17 clinical privileges. In fact --

18 QUESTION: Even though that be true, as I
19 understand it the surgeon has to take this package that
20 the hospital provides including anesthesiologists.

21 MR. LANDIS: The surgeon does not purchase the
22 hospital services.

23 QUESTION: I know he does not, but he has to
24 use those facilities, does he not, under this
25 arrangement or not?

1 MR. LANDIS: The only decision the surgeon
2 makes as to what he uses is the operating room.

3 QUESTION: Yes.

4 MR. LANDIS: Certainly the surgeon who had
5 been using East Jefferson General Hospital under this
6 contract probably knew that he would not have a choice
7 of anesthesiologists, but the point is the decision to
8 choose an anesthesiologist does not arise until the
9 patient is already in the hospital and whether it be
10 made by the patient or by the anesthesiologist once that
11 patient is in the hospital for surgery --

12 QUESTION: Or by the surgeon you mean.

13 MR. LANDIS: Yes, excuse me, by the surgeon.
14 But once the patient is in the hospital neither the
15 surgeon nor the patient is going to change hospitals
16 because they cannot have the anesthesiologist of their
17 choice.

18 QUESTION: As I understand it even though the
19 surgeon may not come with the package everyone else does
20 including the anesthesiologist. Is that true?

21 MR. LANDIS: No, not everyone. As Mr.
22 Easterbrook pointed out I think the cardiologists are
23 under contract with the hospital at the present time,
24 the radiologists and perhaps the pathologists.

25 QUESTION: But they do come with the package.

1 MR. LANDIS: If you accept that this is a
2 package.

3 QUESTION: Well, I mean if you are going to be
4 in that hospital and you need a radiologist you are
5 going to use the radiologist.

6 MR. LANDIS: And you will be billed a separate
7 charge for that service.

8 QUESTION: Yes.

9 MR. LANDIS: Now anesthesiology is no longer a
10 speciality that is under contract at the hospital. The
11 anesthesiologists who practice there including Dr. Hyde
12 bill their own patients. They bill the patients
13 separately.

14 The hospital bills the patients for the drugs
15 that he used, but the professional service is billed
16 separately from the hospital, billed directly by the
17 physician.

18 QUESTION: Does your argument depend on your
19 assumption that people go to the hospital that is
20 nearest to where they live?

21 MR. LANDIS: No, I do not believe --

22 QUESTION: I thought you said the doctor goes
23 to the hospital that is nearest his office and the
24 patient goes to the hospital that is nearest his home.
25 Your case does not depend on that does it?

1 MR. LANDIS: No, sir. It does not. That was
2 --

3 QUESTION: Well, look to somebody other than
4 me please.

5 MR. LANDIS: That was an observation that both
6 courts made in connection with making the findings
7 regarding the market. No, our case does not depend upon
8 that finding.

9 The point is that the competitive conditions
10 are not like the Petitioners would have this Court
11 assume. East Jefferson is not a clinic such as the Mayo
12 Clinic or the Cleveland Clinic where physicians join
13 together as partners to render comprehensive medical
14 care.

15 QUESTION: Wait a minute. The Mayo Clinic is
16 not a partnership.

17 MR. LANDIS: Excuse me. I used that in the
18 generic term. I meant to us it --

19 QUESTION: And it does not own any hospitals.

20 MR. LANDIS: My point is that it is not a
21 clinic where comprehensive care is rendered to a
22 patient, and the patient as Mr. Easterbrook said when he
23 goes in he accepts the services of a surgeon,
24 anesthesiologist and so forth. Now a law firm would be
25 more analogous to that situation than it is to East

1 Jefferson General Hospital.

2 East Jefferson General Hospital is an acute
3 care hospital, and it is neither owned nor controlled
4 nor associated other than perhaps by contracts with the
5 physicians who use its facilities.

6 QUESTION: Mr. Landis, how large a hospital is
7 it? How many beds?

8 MR. LANDIS: It is I believe between 500 and
9 600 beds now. It has been expanding so rapidly that I
10 am not sure exactly where it is now. It is
11 approximately 500 I would think.

12 QUESTION: Assuming you wanted to go to that
13 particular hospital you just cannot be treated by any
14 doctor you want. Say you have an internal medicine
15 problem. If you want to go to that hospital you are
16 going to have to use some doctor that is on a staff, are
17 you not, who is admitted to practice in the hospital?

18 MR. LANDIS: My point is that patients do not
19 go to hospitals. They go initially to a physician.
20 They go to an internist, a surgeon, whatever specialist
21 they require.

22 That physician would make the decision as to
23 what hospital to put the patient in. Now perhaps if a
24 physician was on the staff of more than one hospital he
25 might ask the patient --

1 QUESTION: It sounds to me like you do not
2 really support all of the Court of Appeals' opinion.

3 MR. LANDIS: I am not sure to what you are
4 referring.

5 QUESTION: Well, I thought in defining their
6 market they thought that a lot of patients prefer
7 hospitals closer to their home so they want to go to
8 that hospital.

9 MR. LANDIS: To that extent you are correct,
10 Your Honor. I think the market is probably actually
11 smaller than even the Court of Appeals believed. Now I
12 am talking --

13 QUESTION: Or it could be larger.

14 MR. LANDIS: It could be larger. I am talking
15 --

16 QUESTION: It could be larger. If you were
17 going to go where your doctor took you, you do not
18 really care.

19 MR. LANDIS: The point is the market for
20 anesthesiology services is essentially limited to the
21 hospital.

22 QUESTION: Mr. Landis, this and many of the
23 other points you have just been covering are all factual
24 questions are they not? We may all have some
25 recollection of what happened to us when we were in the

1 hospital, but there is no reason to think things are
2 done the same way in Washington as they are in New
3 Orleans or somewhere else so when you talk now about why
4 a patient goes to a hospital are you referring to
5 something in the record?

6 MR. LANDIS: Yes, Your Honor. There was
7 testimony at trial by a number of physicians who
8 testified about how patients and surgeons may choose
9 anesthesiologists, and my opening point was that the
10 Court should rely on that record, on that evidence in
11 deciding this case and not on the assumption that there
12 is no competition in the industry.

13 QUESTION: May I interrupt with one question
14 about the facts now because when I asked the Solicitor
15 General why there was this arrangement he referred me to
16 finding 19 on pages 32A and 33A. Is that the finding
17 that the Court of Appeals set aside as clearly
18 erroneous, the one about the reasons for the agreement?

19 MR. LANDIS: Yes, sir. The District Court
20 said that the exclusive contract was motivated by the
21 purposes of the hospital to render better medical care,
22 and the Court of Appeals said that was clearly
23 erroneous.

24 However, the record as we tried to point out
25 in our brief indicates that the reason the hospital

1 entered into this contract back in 1971 was that it had
2 to attract an anesthesiologist to work there. It was an
3 unproved venture.

4 It had no track record, and it had to attract
5 someone just as in the General Electric case when they
6 started selling and marketing regional antenna systems
7 or local antenna systems. They had to keep the whole
8 package together because it was an unproven venture.

9 Just as in that case circumstances changed and
10 the justification for the tie disappeared. The same
11 circumstances occurred here.

12 QUESTION: Your view is what you call a tie
13 was an originally lawful agreement, but it became
14 unlawful when the anesthesiologist was no longer
15 interested in preserving his exclusive position.

16 MR. LANDIS: I think there was a valid
17 business justification for the tie in the beginning, and
18 that was that it was needed to attract an
19 anesthesiologist to the hospital. That has not been the
20 case for a number of years, and I do not think even the
21 Petitioner would --

22 QUESTION: What do you think the record shows
23 was the reason why the hospital preserved the
24 arrangement?

25 MR. LANDIS: I think the economics of it

1 explain that. The hospital in exchange for essentially
2 doing nothing was given 50 percent of the revenues
3 produced by the anesthesia department.

4 As we --

5 QUESTION: You cannot say they did nothing.
6 They paid the nurse anesthetist and they provided the
7 facilities and the place to --

8 MR. LANDIS: The facilities were built
9 separately. You are right. They did do something.
10 They paid the nurse anesthetist, but one of the purposes
11 of a tying arrangement is to disguise price.

12 The contract artificially limited the number
13 of anesthesiologists that were out there by allowing the
14 hospital to skim off profits that otherwise could have
15 been used to attract additional anesthesiologists. For
16 example, the Court of Appeals noted in footnote 10 of
17 its opinion that at the time of trial in 1980 there were
18 over 10,000 operations performed per year at the
19 hospital.

20 Using a very conservative figure in that
21 footnote of \$100 per operation the court calculated that
22 the revenues produced were approximately \$1 million a
23 year, and probably \$200 an operation would be more
24 realistic because in 1978 when there were only seven
25 operating rooms in use the department of anesthesia

1 generated \$1.6 million. That is shown at page 51 of the
2 appendix.

3 The hospital took 50 percent of those
4 revenues, and it paid the nurse anesthetists and had
5 something left over which it put back into its operating
6 fund. The hospital is a nonprofit operation, but --

7 QUESTION: But if the hospital has market
8 power why does it have to go through all of this
9 shenanigans? Why does it not just raise the cost of the
10 hospital services?

11 MR. LANDIS: I think the hospital's opening
12 its staff when the medicare rules changed indicates why
13 they had to do that. While this case was on appeal to
14 the Fifth Circuit the medicare rules did change.

15 The rules no longer permit hospitals to
16 receive reimbursement for anesthesia in excess of the
17 compensation paid to the anesthesiologist. Now if the
18 purpose were really to create efficiency, make the
19 operation more efficient that should not be any reason
20 for the hospital to change its system.

21 However, the hospital immediately "opened its
22 staff" and terminated the contract and ended the very
23 contract we are attacking. If their motive was one of
24 efficiency the new rules would not have effected that.

25 However, if their motive was one of receiving

1 excess profits that they could not get in other ways
2 that they could not get reimbursement for for other
3 services but could get it here that rule would directly
4 affect that motive. We submit that that is exactly what
5 happened in this case.

6 From what we have said so far it should be
7 obvious that we believe the legality of the exclusive
8 contract must be judged from the perspective of its
9 impact on patients and on anesthesiologists, and in
10 their reply brief at pages 2 and 11 the Petitioners
11 point out their disagreement with that position.

12 They say it is wrong to consider the
13 perspective of the patient, is wrong to consider the
14 perspective of the anesthesiologist. This must be
15 considered only from the viewpoint of the hospital.

16 Now again if they are right then they should
17 win the case because we have never alleged much less
18 tried to prove that this contract restrained competition
19 among hospitals. On the other hand, we have alleged and
20 we have proved that the contract injured patients by
21 depriving them of an opportunity to choose an
22 anesthesiologist either through themselves or through
23 their surgeons.

24 QUESTION: Mr. Landis, is it your position
25 that the patient should have a right as a matter of

1 anti-trust law to choose a specialist that a hospital
2 normally provides?

3 MR. LANDIS: No, Your Honor, but it is my
4 position that before that right is taken away there has
5 got to be a good reason, and I submit there is no good
6 reason in this case.

7 QUESTION: Are you suggesting that there is no
8 benefit that flows from the hospital having the sort of
9 arrangement that this hospital has?

10 MR. LANDIS: That is exactly what I am
11 suggesting. I think the record supports that.

12 QUESTION: Can you think of any more chaotic
13 situation than where every patient had the right to
14 choose every specialist who performed in a hospital?

15 MR. LANDIS: Your Honor, the Fifth Circuit
16 pointed out that this case did not raise that issue. It
17 did not raise the issue --

18 QUESTION: No, but I am asking you what you --

19 MR. LANDIS: I think certainly there are
20 limits and that would be a justification if the
21 situation became so chaotic that the quality of care
22 suffered. I believe that would be a valid justification
23 for limiting their freedom of choice.

24 QUESTION: Even if it does not become chaotic
25 do we need any evidence, concrete evidence, to show that

1 a coordinated, integrated system of all these different
2 specialties is more efficient than having the
3 freelancers come in at every stage whether it is a
4 therapist who is going to assist an orthopedic patient
5 after a hip operation or whatever? Do you mean to tell
6 me --

7 MR. LANDIS: I think that is --

8 QUESTION: Does your case depend on there
9 being no greater efficiency in this type of operation
10 over the kind that you are advocating?

11 MR. LANDIS: I think that is the role of
12 competition. Mr. Easterbrook said that on one end of
13 the spectrum we could have a completely open staff and
14 if there would more anesthesiologists in business then
15 they would all be part time. I do not think that is
16 correct.

17 Competition teaches us that the good
18 anesthesiologists, the most skilled, would work full
19 time and the least skilled would not work at all.

20 QUESTION: Would your theory apply to a law
21 firm that has a tax division that takes care of the
22 clients' tax problems and a probate division that takes
23 care of drafting wills and trusts and that sort of
24 thing?

25 MR. LANDIS: No, Your Honor, I think the

1 clinic that I describe is more closely analogous to a
2 law firm. A hospital is not analogous to a law firm.

3 A hospital is not a direct competitor with
4 doctors but it renders services on the same level. It
5 has a horizontal complementary relationship with
6 doctors.

7 QUESTION: But the principle of having all of
8 the specialty trained people coordinated in one
9 operation is that not something that could be taken into
10 account in applying the rule of reason as the District
11 Court did?

12 MR. LANDIS: Your Honor, all these
13 justifications as far as efficiency were investigated at
14 trial, and the Court of Appeals properly found on the
15 record that either of these justifications did not
16 exist. These efficiencies did not exist based upon the
17 record or if they did exist they could be achieved
18 without granting monopoly to one group of
19 anesthesiologists. That is the least restrictive
20 alternative analysis which this Court used last year in
21 the Maricopa County case.

22 It found that although it may be beneficial
23 for there to be a price schedule for reimbursement for
24 medical fees there was a less restrictive way to do it.
25 Doctors did not have to do the price fixing, and that is

1 the same kind of analysis that was employed here.

2 QUESTION: Mr. Landis, is it your view that a
3 closed staff, privately owned and operated hospital
4 would be a per se violation of anti-trust laws?

5 MR. LANDIS: Owned by whom, Your Honor?

6 QUESTION: Well, for example, some hospitals
7 today are owned by public corporations. In my city of
8 Richmond, Virginia a number of hospitals were owned by
9 the doctors.

10 MR. LANDIS: I think if the hospitals were
11 owned by the doctors that might present a different
12 question, but assume a hospital owned by a corporation
13 independent of the doctors I think under the right
14 market conditions and right competitive conditions it
15 might be a violation of the anti-trust laws. I think
16 each case has got to be judged on the market as the per
17 se rule requires.

18 It requires an analysis of the market and of
19 the competitive impact at least the per se rule for --

20 QUESTION: Do you have any private hospitals
21 in the New Orleans area?

22 MR. LANDIS: Yes, sir. There are quite a
23 few.

24 QUESTION: Do they have closed staffs?

25 MR. LANDIS: Some of them do and some of them

1 do not. The majority of the hospitals in the New
2 Orleans area at least until the new medicare rules had
3 closed staffs, and that was one of the problems is that
4 because of that you have an allocation in the market to
5 the contract groups rather than -- A new entrant into
6 the market essentially would have to go to work for one
7 of those groups if he wanted to be able to practice.

8 That is one of the evils produced by these
9 kinds of contracts.

10 QUESTION: In New Orleans they have several
11 hospitals that are for profit.

12 MR. LANDIS: Yes, sir. There are.

13 QUESTION: They sure do.

14 QUESTION: Mr. Landis, why should the Court
15 ever apply a per se rule in these cases instead of a
16 rule of reason in each instance?

17 MR. LANDIS: I think with respect to tying
18 cases the per se rule as the government points out and
19 as the Petitioners point out is not a hard and fast per
20 se rule. It does allow some flexibility. It does allow
21 some analysis, and I think the way the rule has evolved
22 --

23 QUESTION: Why isn't the public and the
24 purposes of the anti-trust law basically served by just
25 recognizing that we ought to apply a rule of reason?

1 MR. LANDIS: Because I think there is enough
2 flexibility now in the current rule to properly weed out
3 the cases that are not violations from the ones that
4 are. If the Court believes that perhaps the rule should
5 be evaluated I suggest that this is not the case to do
6 it.

7 This is not a typical industry. This is not
8 an industry characterized by active price competition.
9 This is not the case to rewrite the rule on time
10 arrangements.

11 I was discussing the perspective of the
12 patients and physicians. In United States v. Loew's,
13 Inc. the Court had this to say about tying
14 arrangements.

15 They are an object of anti-trust concern for
16 two reasons. They may force buyers into giving up the
17 purchase of substitutes for the tied product, and they
18 may destroy the free access of competing suppliers of
19 the tied product to the consumer market.

20 That is exactly our perspective. We are
21 looking at the consumer, that is, the patient and the
22 competing suppliers of the tied product, that is the
23 anesthesiologists.

24 When the record is considered it is not
25 surprising that this perspective is not the one chosen

1 by the hospital, by the Petitioners because the record
2 supports that the contract coerced patients, denied them
3 freedom of choice and essentially eliminated any chance
4 for competition among anesthesiologists.

5 At this point I would like to respond to the
6 arguments of the Petitioners and the government
7 concerning the manner in which the exclusive contract
8 should be considered for anti-trust purposes. The
9 Petitioners argue that the contract is merely a vehicle
10 by which the hospital attempted to vertically intergrate
11 its operation and that it is really no different than an
12 employment contract.

13 We disagree with that position, and if the
14 label makes any difference -- I am not sure it does --
15 we submit that this is a horizontal, not a vertical
16 restraint. As I have discussed a few minutes ago
17 hospitals all operate on the same level as doctors.
18 They both sell things to patients.

19 They may not be competitors in the sense they
20 do not sell the same products, but they sell on the same
21 level. Through the contract the hospital combined with
22 a competitor in the market for anesthesia to exclude
23 another competitor. I submit that certainly is a
24 horizontal restraint.

25 The Petitioners' argument that they could have

1 employed anesthesiologists without violating the
2 anti-trust laws is misplaced. The fact is they did not
3 do that.

4 That issue is not before the Court and the
5 fact that that may or may not have violated the laws
6 should not affect this case. The government argues that
7 the exclusive contract is --

8 QUESTION: Let me stop you right there. Why
9 is that a different case? Supposing they had four
10 professional doctor anesthesiologists on their salary
11 and therefore if a patient went to the hospital he had
12 to take one of those four. Why would that be a
13 different case?

14 MR. LANDIS: Your Honor, the fact that an
15 anti-trust defendant can perhaps achieve the same --

16 QUESTION: Do you contend there would be a
17 different competitive significance if that is true or it
18 is just a kind of loop hole in the law?

19 MR. LANDIS: I think not only the fact of
20 whether it is employment or contract would be different
21 but other facts would be different if this were truly an
22 employment situation. We would not have the economics
23 at play that we have here.

24 We would not have the -- Presumably the
25 physicians would be --

1 QUESTION: They could delegate salary doctors
2 the authority to send out the bills I suppose. I do not
3 understand why that would be different.

4 MR. LANDIS: Your Honor, as I say perhaps it
5 could have employed the anesthesiologists without
6 violating the law. They did not do it.

7 That case is not before the Court, and I do
8 not think it is frankly relevant to this case.

9 QUESTION: I do not blame you for thinking
10 that unless you want to take a position that the hired
11 staff would also violate the anti-trust law. You do not
12 want to press that.

13 MR. LANDIS: No, Your Honor. I will not take
14 position on that because that is not this case and
15 frankly I do not know. I think it could under some
16 circumstances, but I am not prepared to answer that
17 question.

18 QUESTION: Do you think you could have sued or
19 did you sue the anesthesiologists in this case?

20 MR. LANDIS: No, we did not sue them, Your
21 Honor, primarily because they were against this contract,
22 too.

23 QUESTION: I know, but they were nevertheless
24 a party to the contract.

25 MR. LANDIS: They were parties to the contract

1 --

2 QUESTION: And it was a tying contract.

3 MR. LANDIS: We could have sued them, but we
4 did not just as we did not ask for damages. We asked
5 for an injunction.

6 We were not interested in the monetary
7 losses. We were interested in obtaining staff
8 privileges for Dr. Hyde.

9 The government argues that this --

10 QUESTION: You asked for an injunction only
11 and then the contract is expired. Does that not raise
12 some sort of a mootness question?

13 MR. LANDIS: Your Honor, the Petitioners
14 raised that issue in the Fifth Circuit, and they moved
15 to dismiss on the grounds of mootness. We opposed the
16 motion on the ground of the W. T. Grant case that when
17 the --

18 QUESTION: It might repeat.

19 MR. LANDIS: The Fifth Circuit apparently
20 agreed. I think that that case is still applicable
21 now.

22 QUESTION: They have some other exclusive
23 arrangements, do they not, for other specialities?

24 MR. LANDIS: The hospital currently does, yes,
25 Your Honor.

1 QUESTION: For what?

2 MR. LANDIS: For cardiologists, radiologists
3 and --

4 QUESTION: So they have exactly the same
5 arrangement with other specialists?

6 MR. LANDIS: I am not sure they are exactly
7 the same --

8 QUESTION: But they are the kind that you
9 would attack.

10 MR. LANDIS: They are the kind that I would
11 attack.

12 QUESTION: Yes.

13 QUESTION: If you knew what they were.

14 QUESTION: Even the pathologists?

15 MR. LANDIS: Your Honor, I think perhaps the
16 economics may be different.

17 QUESTION: I am not sure the patient selects
18 his own pathologist.

19 (Laughter)

20 MR. LANDIS: I think that may reach the limit
21 of when these contracts can be attacked, but fortunately
22 we do not have that case before us either.

23 In summary, I would like to emphasize three
24 points. First, the Court should look to the actual
25 market conditions and not to theoretical models of

1 noncompetition in deciding the legality of the case.

2 That requires looking at the case from the
3 perspective of the patients and anesthesiologists, not
4 from the perspective of the hospital. Second, that the
5 exclusive contract injured competition is undeniable,
6 and I do not think Petitioners deny it.

7 The only question relates to the significance
8 of that. They claim that there is a national market and
9 that any local restraint necessarily is insignificant.

10 We claim that national market argument is
11 unfounded. Third, the per se rule against tying
12 arrangements was expressly designed to prevent the evils
13 occurred here, that is, a coercion of consumers to buy
14 goods from one competitor to the exclusion of all others
15 and second the exclusion of competitors, the exclusion
16 of potential suppliers of the tied point.

17 If there are no further questions we will rest
18 on our brief.

19 CHIEF JUSTICE BURGER: Thank you, gentlemen.

20 The case is submitted.

21 (Whereupon, at 1:59 p.m., the case in the
22 above-entitled matter was submitted.)
