1 PROCEEDINGS

2 (10:05 a.m.)

3 CHIEF JUSTICE REHNQUIST: We'll hear argument
4 first this morning in No. 89-1965, Cottage Savings
5 Association v. Commissioner of Internal Revenue.

6 Mr. Manes.

7 ORAL ARGUMENT OF DENNIS L. MANES

8 ON BEHALF OF THE PETITIONER

9 MR. MANES: Mr. Chief Justice, and may it please
10 the Court:

11 The Cottage Savings Association case involves a
12 1980 transaction between Cottage Savings Association and
13 other savings and loan institutions regulated by the
14 Federal Home Loan Bank Board. This case is representative
15 of numerous other transactions that were done during the
16 same time period throughout the country.

17 This transaction occurred during a very
18 difficult time period for the savings and loan industry.
19 There was a point in time when savings and loans were
20 caught in a cash squeeze. Interest rates were spiralling
21 upward, and the institutions were watching their funds
22 that they currently held or that normally would flow into
23 the savings institution be depleted and put into higher
24 money market yielding type funds.

25 In order to maintain the funds that it had or

1 attract new funds, the savings and loan institutions had
2 to attract these funds by giving higher interest rates.
3 The Federal Home Loan Bank Board was not a source of funds
4 because they also were charging high interest rates to the
5 member institutions. On the other side of the coin,
6 Cottage and other savings and loan institutions were
7 straddled with low-rate, long-term fixed mortgages.

8 As a result, their earnings were declining,
9 since interest paid on deposits that they were able to
10 maintain or attract far exceeded the income flow from the
11 fixed-term mortgages that they held. In effect the
12 savings institutions were lending long and borrowing
13 short. The future did not look good for Cottage or other
14 savings and loan institutions.

15 Then something happened. An agency of the
16 Government, the Federal Home Loan Bank Board, stepped up
17 to the plate for its industry and adopted R-49. The
18 stated objective of R-49, which was a promulgation of the
19 Federal Home Loan Bank Board, was to create a transaction
20 that would cause a loss for tax purposes, and not require
21 the savings institution to book the loss from a regulatory
22 standpoint. The effect to the savings institution on
23 their net worth requirement was negative if they entered
24 into one of these transactions, and the sponsoring
25 organization was recognizing that the policy of these

1 transactions was to create a loss for tax purposes.

2 Cottage and other savings institutions were in a
3 terrible financial situation, and they really had two
4 choices. One, they could sit back and watch their net
5 worth further erode, and possibly taking it below the net
6 worth requirements that were in existence, or two, follow
7 the Federal Home Loan Bank Board's transaction, the
8 transaction that the Federal Home Loan Bank Board
9 promulgated and endorsed, and enter into a transaction
10 that would create a loss for tax purposes. .

11 QUESTION: Of course, the Home Loan Bank Board
12 doesn't give tax advice, does it? Did the Home Loan Bank
13 Board assure your clients that they'd get a tax deduction?

14 MR. MANES: That's correct. We did not --

15 QUESTION: Yes, right.

16 MR. MANES: -- get a guarantee from the Federal
17 Home Loan Bank Board.

18 QUESTION: And you could have -- you could have
19 gone to the Internal Revenue Service or to the Treasury
20 and asked for advice on the matter, I suppose, couldn't
21 you? Was that done?

22 MR. MANES: That was not done in the Cottage
23 situation, no. There was --

24 QUESTION: You can't really say the Government
25 misled you here. The Home Loan Bank Board gave you a

1 regulatory boon enabling you to apply for a tax loss
2 without losing any solvency as far as the regulator was
3 concerned, but they didn't give -- guarantee anything
4 beyond that.

5 MR. MANES: That's correct. But it was an
6 agency of the Government that was --

7 QUESTION: Sure, it was. But it was not an
8 agency of the Government who said you can have a tax
9 benefit. So the fact that it was an agency of the
10 Government makes no difference. It said you can do this
11 without running afoul of regulatory restrictions, right?

12 MR. MANES: That's correct, but --

13 QUESTION: And they made good on that promise.
14 They didn't pursue you for doing this. I mean, you were
15 not required to decrease your net worth for regulatory
16 purposes, right?

17 MR. MANES: That's correct.

18 QUESTION: So they gave you everything they
19 promised.

20 MR. MANES: But they also had a stated
21 objective, and the stated objective of R-49, as the
22 Government recognizes, was to prepare the transaction that
23 would produce the loss. And I think that that's a -- you
24 know, an important pronouncement by a governmental agency,
25 for the Government.

1 QUESTION: They have no authority to pronounce
2 on tax consequences. You could have gotten a letter from
3 Treasury if you wanted to be sure about that. You were
4 rolling the dice, right?

5 MR. MANES: We were rolling the dice, so to
6 speak, but we did have a pronouncement from an agency that
7 had a lot of authority.

8 QUESTION: That you were free to roll the dice.
9 That's all they told you.

10 MR. MANES: I'll accept that statement.

11 QUESTION: Let me follow through on that. Two
12 or three times you've referred to for the purpose of
13 taking tax losses. Wasn't the purpose for -- purely for
14 regulatory purposes, for accounting purposes as far as the
15 Home Loan Bank Board was concerned?

16 MR. MANES: That was the effect of R-49. The
17 effect of R-49 was -- as pointed out, was from a
18 regulatory standpoint, and whether or not the loss would
19 be required to be booked. And R-49 wasn't a mandatory
20 provision. The taxpayer had an election to book the loss
21 or record the loss from a regulatory standpoint. But --

22 QUESTION: What accounting effect was intended
23 by R-49?

24 MR. MANES: The accounting effect is that R-49
25 was giving the taxpayer an option that if R-49 was

1 followed they could book the loss or not book the loss.
2 Cottage, as well as the industry at the time, was under
3 the impression that --

4 QUESTION: What do you mean put the loss?

5 MR. MANES: Book the loss.

6 QUESTION: Book the loss. All right. Book the
7 loss. It need not book the loss --

8 MR. MANES: That's correct.

9 QUESTION: -- under 49.

10 MR. MANES: And therefore it wouldn't have any
11 effect --

12 QUESTION: But they could claim a tax -- even
13 though you didn't book the loss, you would claim a tax
14 loss?

15 MR. MANES: That's correct, from a tax
16 standpoint.

17 QUESTION: So the accounting effect was really
18 nil if you elected not to book the loss?

19 MR. MANES: That's correct.

20 QUESTION: Well, Mr. --

21 MR. MANES: From accounting regulatory
22 standpoint.

23 QUESTION: Mr. Manes, don't we really have to
24 look at the Code provisions to see if there's a tax loss
25 or not? Do you plan to talk about that?

1 MR. MANES: Yes, I do. The -- that's a point in
2 response to, you know, the questions that I had already.
3 Cottage, as well as the industry, thought the tax law was
4 pretty clear, regardless of the pronouncement that I
5 mentioned of the --

6 QUESTION: Well --

7 QUESTION: Why don't you tell us about it.

8 QUESTION: The Treasury has a regulation that
9 says there has to be a material difference if there is an
10 exchange. Now, is this an exchange or a sale, do you
11 suppose?

12 MR. MANES: We do not argue that issue. The
13 courts that have decided that point --

14 QUESTION: So we take the case assuming it's an
15 exchange?

16 MR. MANES: That's correct.

17 QUESTION: Okay.

18 MR. MANES: That's correct. That's not an
19 issue.

20 QUESTION: All right. And there may have to be
21 a material difference, however, if we apply the Treasury
22 regulation?

23 MR. MANES: Yes. And that's one of the
24 questions here, is to the effect of the Treasury
25 regulation and what is a material difference.

1 The transaction was challenged by the Internal
2 Revenue Service, and the basis of the challenge from the
3 Internal Revenue Service was the regulation that you're
4 referring to. The basis of the challenge is that the
5 property that Cottage exchanged was not materially
6 different than the property that it had received.

7 Our position is that we're really talking about
8 some basic tax concepts here, and these concepts are
9 elementary in the tax law. And the concepts are of
10 realization and recognition. And the test for realization
11 is a all-encompassing type of test. The Code itself, in
12 section 1001 states that you compute gain or loss by
13 taking the amount realized and subtracting from that the
14 adjusted basis. And that's a -- that's a computational
15 section recognizing that there's realization.

16 QUESTION: That's (a), correct?

17 MR. MANES: That's correct. Code section
18 1001(a).

19 The Code then goes further and states that these
20 realized gains or losses are to be recognized unless
21 there's an exception in subtitle (a) of the Internal
22 Revenue Code. And Congress has been pretty clear here in
23 section 1001(a), and Congress has been clear here in the
24 exceptions to the recognition rules, which is the second
25 test here to determine if a loss is to be realized,

1 recognized, and deducted. And they've acted in various
2 areas in the question of recognition, and areas where
3 material difference is really the test. And material
4 difference is, from what we feel, is really a test in
5 recognition. And recognition is the result unless you're
6 in a specific exception of subtitle (a).

7 And the Government and -- recognizes that there
8 is no applicable section here. What the Government is
9 asking is for the Court to write a statutory -- or, I'm
10 sorry, excuse me -- a nonstatutory wash sale rule when
11 Congress has been --

12 QUESTION: Well, but we normally defer to IRS
13 regulations that interpret the statute, and they say there
14 has to be a material difference. They talk about, for
15 example, the situation of exchanging bushels of wheat if
16 the price of wheat drops, and they argue that that would
17 be a perversion of the statute to say that we will
18 recognize a loss in that situation.

19 MR. MANES: The reference to the regulation and
20 the effect on the statute is normally when the statute is
21 not clear. And here the statute is clear. Congress has
22 acted in the area. Congress has the test for
23 nonrecognition, and therefore there must be realization.
24 Because in order to get the nonrecognition you must have
25 realization.

1 QUESTION: You say the regulation then is
2 unauthorized by the statutes?

3 MR. MANES: No, I'm not, Mr. Chief Justice. I
4 think the regulation, for what it says, which is a
5 statement that if you meet the material difference
6 requirement, then there is realization. And it really
7 doesn't say the converse, that if you don't meet it there
8 is not realization. And I think that's a --

9 QUESTION: If one were to imply the converse
10 from the regulation, would you say the converse
11 implication was not authorized by the statute?

12 MR. MANES: It's not authorized by the statute
13 --

14 QUESTION: If you don't say that it seems to me
15 you lose your case.

16 MR. MANES: It's not authorized by the statute,
17 and it doesn't follow the Supreme Court cases that that
18 regulation was really founded upon. And those Supreme
19 Court cases were very hair-trigger type tests as to what
20 is material difference.

21 QUESTION: Well, but then you're saying the
22 regulation could be valid, but that the IRS is
23 interpreting it incorrectly.

24 MR. MANES: I am not --

25 QUESTION: That the regulation should be read to

1 refer to these Supreme Court cases that established a
2 constitutional distinction.

3 MR. MANES: I agree that the regulation -- I'm
4 not challenging the validity, per se, of the regulation.
5 The regulation is there. But the regulation is based upon
6 the early cases that the Government argued a hair-trigger
7 type test for realization, and the early cases really
8 muddled the issue because they kind of combined
9 realization and recognition. And the later portion of it,
10 especially the Code itself, separates these.

11 QUESTION: But there's language in some of this
12 Court's opinions that there has to be -- to the effect
13 that there has to be a material difference, and perhaps
14 the IRS was trying to codify that language, in effect,
15 with its regulation.

16 MR. MANES: That regulation was based upon the
17 case law at the time, which talked about having something
18 materially different. And it was based upon cases where
19 the Government was arguing for a hair-trigger, broad-line
20 approach.

21 QUESTION: I don't know what you mean by that.
22 But do you -- do you take the position that today in the
23 exchange of bushels of wheat example that we should
24 recognize a tax gain or loss?

25 MR. MANES: I think that it would be tested

1 first under realization, or realization would be --

2 QUESTION: Yes or no? Under today's law do you
3 take the view that an exchange of bushels of wheat should
4 result in a taxable gain or loss?

5 MR. MANES: I would answer that as yes. And the
6 answer is based upon a finding of realization, and also
7 you then would have to look to see if there is an
8 exception to the recognition portion. And that's where
9 Congress legislated. And that's where Congress has taken
10 into account material differences. Material differences
11 are really a test of recognition.

12 QUESTION: Is that consistent with Eisner v.
13 Macomber?

14 MR. MANES: Yes. Because Eisner dealt with
15 whether or not just depreciation itself, or just
16 depreciation in the asset, whether or not that --

17 QUESTION: Well, I thought that there was an
18 event. There was an event of a stock dividend, was there
19 not? If I recall.

20 MR. MANES: Well, it's questionable whether that
21 itself was an event, whether a stock dividend would be a
22 triggering event.

23 QUESTION: Well, it would be if the stock
24 dividend were disproportional.

25 MR. MANES: That would be correct. And that's

1 been handled --

2 QUESTION: And the only reason that it, it was
3 held to be nontaxable was the economic position of the
4 taxpayer hadn't changed.

5 MR. MANES: And that really is a question of
6 recognition. And we do have sections in the Code dealing
7 with recognition, as to whether or not that is a taxable
8 event. You have plenty of sections in the reorganization
9 rules that deal with this.

10 Another area, I think, that supports this --

11 QUESTION: Suppose we disagree with you and
12 think that the deference we owe to the regulation means
13 that we will apply it? Do you have a fallback position?

14 MR. MANES: We feel we fall within the
15 definition or the regulation as to what is materially
16 different. We feel we fall into it whether it's a hair-
17 trigger or an easy test to meet, which the Government
18 normally argues. The Government is usually arguing the
19 gain side, not the loss side, and there they ask for a
20 hair-trigger test. They asked for a hair-trigger test in
21 Weiss v. Stearn, where the stock in the reorganization was
22 in the same State.

23 And we also feel that here the asset itself,
24 where you have a different obligor, where you have a
25 different collateral securing that obligation, different

1 real estate, and where you have a different stream of
2 income which has resulted from those differences, then it
3 is materially different.

4 QUESTION: I take it the court of appeals agreed
5 with you on 1001?

6 MR. MANES: That would be a fair interpretation
7 of the Sixth Circuit.

8 QUESTION: And they turned you down on 165?

9 MR. MANES: Yeah, which the Government is now
10 saying is a portion of the material different argument.
11 It's a -- they're not really arguing it, like the Sixth
12 Circuit did, that it's a separate test.

13 QUESTION: So for you to win you have to say the
14 court of appeals was wrong on 165?

15 MR. MANES: Or we could say that the Government,
16 and their position is that it's a material difference
17 test, and it's still satisfied in material difference.

18 QUESTION: Well, I would suppose we wouldn't
19 decide that. We would say that the court of appeals was
20 wrong on (a)165 and wrong on 1001 and remand to see if in
21 this particular transaction there was a material
22 difference. Because I don't know that you get the same
23 answer on every single trade of mortgages, would you?

24 MR. MANES: We feel that on trades of mortgages
25 you would get the same answer.

1 QUESTION: So you would -- if -- if the -- if we
2 would say the regulation is valid, you would then go to
3 the court of appeals for the Fifth Circuit rationale?

4 MR. MANES: That's correct. That's correct,
5 Your Honor.

6 QUESTION: Is it because all mortgages are
7 unique?

8 MR. MANES: We feel that mortgages are unique,
9 especially with the different obligor and different --

10 QUESTION: But that simply is inconsistent with
11 the whole design of these transactions. They matched up
12 the mortgages on the computer banks and they came out
13 within a few cents of each other, and they switched. And
14 there was absolutely no showing that -- unless I'm wrong,
15 correct me -- that they investigated to see if they were
16 going to get high rent, or high income homes or low-income
17 homes. Nobody seemed to care. They were just switching
18 these mortgages around. Correct me if I'm mistaken.

19 MR. MANES: From a pure subjective point of
20 view, I think you're correct. From a objective criteria
21 --

22 QUESTION: From a computer point of view.

23 MR. MANES: Right. But there's still an
24 objective standard here where you do have different
25 obligors and different collateral, and the history has

1 shown that these did act differently. There was a major
2 difference between those received and those that were
3 sold.

4 QUESTION: Did the computer matching and
5 analysis seek to make an analysis of relative risk, so
6 that the computer was attempting in effect to substitute
7 one pool with a given level of risk with another at
8 exactly the same level of risk?

9 MR. MANES: Only within the context of R-49.

10 QUESTION: I'm not sure that I know what you
11 mean by that.

12 MR. MANES: Well, R-49 was --

13 QUESTION: Let's forget R-49. If I'm just going
14 out on the market to buy a participation in a pool of
15 mortgages, and I am looking at the two pools in question
16 here, does the computer purport to tell me that I am
17 buying a participation with the same level of investment
18 risk, no matter which of the two I buy into?

19 MR. MANES: You're buying a potential stream of
20 income that will perform differently --

21 QUESTION: Sure, but I want to know what the
22 risk is that I'm not going to get the income. I want to
23 know what the risk is that there's going to be a default.
24 Am I buying -- do I have a choice based, assuming the
25 computer is properly programmed, do I have a choice of

1 buying into two, two pools of equal risk, or am I simply
2 buying into two pools of mortgages with roughly equal
3 collaterals and net values of collateral, market values of
4 collateral?

5 MR. MANES: Justice Souter, that would depend
6 upon what factors the computer was looking at.

7 QUESTION: And that's what I want you to tell
8 me.

9 MR. MANES: Okay, well --

10 QUESTION: I mean, what I'm getting at is
11 whether there is a material difference depends in part of
12 what kinds of differences would be relevant to a mortgage
13 lender. And one of the things that a mortgage lender
14 would be concerned with is the degree of risk. And if
15 what we have got are two pools which on the matter of risk
16 are virtually homogeneous, that may suggest one answer in
17 this case. But if we have got two pools in which the
18 risks, relative risks, have not been assessed, then we
19 might come up with another answer.

20 MR. MANES: I'd like to direct you to Fannie
21 Mae, and their amicus brief, because that issue was
22 addressed there. And the issue was that -- and I hate to
23 refer back to R-49 because of the question, but that R-49
24 wasn't a complete situation of trying to bring these risks
25 so close together that they would perform exactly the

1 same. In history --

2 QUESTION: Well, is -- your answer to my
3 question then is no, the computer did not purport to give
4 you two pools of identical risk?

5 MR. MANES: That's correct.

6 QUESTION: Okay.

7 MR. MANES: That's correct, because there is a
8 lot of other factors that would have had to be taken into
9 account.

10 The Government has raised the difference of
11 economic position between the taxpayer before and after
12 the transaction as a determining issue here, and they
13 raise it in a very subjective analysis. And the Internal
14 Revenue Code hasn't really be built upon a subjective
15 analysis. The Internal Revenue Code has been built upon
16 objective facts that Congress has adopted and that we can
17 look at for a result.

18 And they also state that the economic position
19 of the taxpayer had not changed because this potential
20 flow of income, this stream of income could turn out to
21 the be the same. But it could also turn out to be
22 different, which is what happened, which shows that they
23 are materially different.

24 And from an economic position standpoint, a very
25 important criteria of what is the same economic position

1 was brought out throughout this case. And that was that
2 Cottage, at least in this particular case, started out
3 with 100 percent mortgage before the transaction. And
4 after the transaction it had a 90 percent participation in
5 other mortgages. And that was determined to be a
6 transaction that put Cottage in a much less liquid
7 position regarding its mortgages after the transaction.

8 QUESTION: Of course the only purpose of that
9 was to enable the relationship between borrower and lender
10 to continue, was it not?

11 MR. MANES: That -- that's correct, because
12 that's the normal way that mortgages are bought and sold.

13 Mr. Chief Justice, and may it please the Court,
14 I'd like to reserve the rest of my time for rebuttal.

15 QUESTION: Very well, Mr. Manes.

16 Mr. Roberts, we'll hear now from you.

17 ORAL ARGUMENT OF JOHN G. ROBERTS, JR.

18 ON BEHALF OF THE PETITIONER

19 MR. ROBERTS: Thank you, Mr. Chief Justice, and
20 may it please the Court:

21 The court below correctly concluded that the
22 taxpayer, Cottage Savings, was not entitled to a deduction
23 for losses claimed to arise from its swap with pools of
24 substantially identical mortgage loans.

25 QUESTION: They don't claim the losses arose

1 from the swap. They were realized at the time of the
2 swap. They arose before the swap. They were in fact real
3 losses, weren't they?

4 MR. ROBERTS: There was a real decline in the
5 book value of the mortgage loans --

6 QUESTION: So the loss had arisen prior to the
7 transaction.

8 MR. ROBERTS: The loss was arising as time went
9 by. The question is whether or not their swap of pools of
10 substantially identical mortgage loans resulted in a
11 realization of that loss.

12 QUESTION: Mr. Roberts, if the facts had been
13 just the reverse and the values of the properties had gone
14 up and there was an exchange, what position would IRS
15 take?

16 MR. ROBERTS: Well, the position would be no
17 gain would have been realized. I'd point out, of course,
18 that that situation wouldn't arise, because there would be
19 no need to engage in a swap. Gain would not be realized
20 simply by holding on to the valuable, appreciating
21 mortgages.

22 QUESTION: But you may have other situations
23 where there are exchanges in the future for -- where there
24 might be a gain, and the IRS is prepared to apply exactly
25 the same test to that one?

1 MR. ROBERTS: Exactly the same test, Your Honor.
2 And the fact that it cuts both ways for our position we
3 think indicates that it is a neutral position in the tax
4 code, and not simply something we're trying to --

5 QUESTION: And what do you look at? Just the
6 fact that the economic value at the time of the exchange
7 is the same?

8 MR. ROBERTS: No, Your Honor.

9 QUESTION: No.

10 MR. ROBERTS: The economic value --

11 QUESTION: What's your test, then, for material
12 difference?

13 MR. ROBERTS: We think you should look at all
14 the available evidence presented, and see if the
15 difference had a capacity to affect the decision. Now
16 here all the available evidence indicates that the
17 differences that Cottage now relies on, differences in
18 borrowers, differences in collateral, were of no
19 significance to any parties to the transaction --

20 QUESTION: This is a subjective test or is it an
21 objective test?

22 MR. ROBERTS: It has been labelled --

23 QUESTION: You first said that the -- whether
24 the differences were of a nature as to affect the
25 decision, and now you're saying here they in fact didn't

1 affect the decision. Which is going to be crucial for
2 your --

3 MR. ROBERTS: The former. It is an objective
4 test. We've -- my brother has labelled it subjective, but
5 it is not. We've looked to the conduct and the intent of
6 the parties as probative evidence for the objective nature
7 of the transaction.

8 QUESTION: Suppose -- suppose two taxpayers who
9 have stock in different mutual funds have a study done by
10 an expert, and he says these two funds, their performance
11 in the past has been just about the same, in the future
12 they are likely to be the same, as far as I can tell it's
13 tweedle-dum and tweedle-dee. And they swap their stock in
14 these two different mutual funds. Is that a -- is that an
15 event that would trigger a gain or a loss, or not?

16 MR. ROBERTS: Yes, it is. The mutual funds --

17 QUESTION: It is? Why?

18 MR. ROBERTS: The mutual funds are not matched
19 up the way that these pools of mortgages were. In the
20 first place, the mutual funds are run by separate
21 management companies who may have different perspectives
22 on how to --

23 QUESTION: Well, these houses are owned by
24 different people, whose economic success and ability to
25 pay their mortgages are quite different.

1 MR. ROBERTS: And if you're considering to --
2 whether to invest in a mutual fund, you want to know who
3 the management of the fund is, you want to know what their
4 investment philosophy is. Here --

5 QUESTION: If you take a mortgage on a house you
6 want to know who the mortgagor is, too.

7 MR. ROBERTS: Not in the secondary mortgage
8 market. It is not a factor. In fact at the time of the
9 transaction Cottage conducted no credit checks of the
10 borrowers, no appraisal of the properties. .

11 QUESTION: But that's being subjective. You're
12 just saying not that nobody could see a difference, but
13 that this particular trader didn't care.

14 MR. ROBERTS: And that's strong evidence of what
15 the nature of the transaction is.

16 QUESTION: No. Because if I was doing the swap
17 I would have cared. You see, I wouldn't have -- I
18 wouldn't have accepted that. I want to know who these
19 mortgagors are. So you're really not applying an
20 objective test. You're just saying that these particular
21 traders didn't care who the mortgagors were.

22 MR. ROBERTS: No, I am saying that these
23 particular traders didn't care who the mortgagors were,
24 but not that that is the critical factor, but it's
25 evidence of the objective nature of the transaction. If

1 you were engaged in the secondary mortgage market, you
2 wouldn't care who the mortgagors were. You don't go into
3 that market and say --

4 QUESTION: Oh, I see. It's not any trader.
5 It's a trader who's in the secondary mortgage market.

6 MR. ROBERTS: Well, yes.

7 QUESTION: Does it have to be a trader in the
8 secondary mortgage market living in New York?

9 MR. ROBERTS: No. A secondary --

10 QUESTION: You know, how specific -- when you
11 get specific enough then it's the same thing as a
12 subjective test.

13 MR. ROBERTS: No, it's not. I'm not suggesting
14 that the result is going to be different depending upon
15 the subjective reactions of the different traders and the
16 different R-49 transactions. We think they all point the
17 same way. None of these traders cared who the borrowers
18 were or what the collateral was. In the secondary
19 mortgage market you don't go in and say I have Tim Smith's
20 mortgage on 148 Oak Street, what am I bid. You say I've
21 got a \$150,000 30-year note secured by a single family
22 residence in Virginia, fair market value of \$75,000, loan-
23 to-value ratio of 80 percent. In other words, the precise
24 factors set forth in Memorandum R-49.

25 QUESTION: But that just shows that these

1 traders didn't care.

2 MR. ROBERTS: That's the market I'm describing,
3 not just these traders. These transactions in the market
4 aren't based on who the borrower -- if someone --

5 QUESTION: Yes, but the mutual -- you could make
6 the same argument about two mutual funds that pay the same
7 interest rate and they are equally liquid, they are both
8 short term funds, and one is the First National Bank and
9 the other is the Chase Manhattan Bank, or something. And
10 the average person in the market would think that's
11 tweedle-dum and tweedle-dee, wouldn't he?

12 MR. ROBERTS: I think not, Your Honor. I think
13 the average person in the market wants to know before he
14 puts his money in a mutual fund what the management is,
15 what their philosophy is, what the holdings. That's the
16 prospectus to tell you what the different holdings are.
17 That's not how this market works.

18 QUESTION: Of course with a mutual fund you
19 wouldn't care because it's not recognized under -- what is
20 it, 1031 -- anyway. Exchange of like kind, but it's not
21 --

22 MR. ROBERTS: I don't think that's true, Your
23 Honor. I don't think under the --

24 QUESTION: Oh, it is recognized?

25 MR. ROBERTS: I don't think the IRS regards

1 different mutual funds as being of like kind. They
2 certainly don't regard different issuers of stock as being
3 of like kind, and I don't think there would be any
4 difference in the mutual fund context.

5 QUESTION: Was there any finding in the tax
6 court or by the court of appeals that the secondary
7 mortgage market had this characteristic which you
8 describe?

9 MR. ROBERTS: Not so much in the tax court in
10 this case. There was a finding in the Centennial case
11 along those lines, and Cottage has indicated that the
12 facts of its case are similar to the facts of those --
13 that -- those cases in the Fifth Circuit.

14 QUESTION: That was a finding by the court of
15 appeals or by the tax court?

16 MR. ROBERTS: In Centennial, by the Federal
17 district court.

18 QUESTION: By the -- that came up through the
19 Federal district court?

20 MR. ROBERTS: Yes, Your Honor.

21 QUESTION: So, if I understand what you're
22 saying, what you recite in your brief as being a simple
23 example, you very facilely say swapping one bushel of
24 wheat for another bushel of wheat doesn't make any
25 difference, that that's not an event that triggers

1 recognition, that's really not true. You really have to
2 know who the traders are, don't you?

3 MR. ROBERTS: You don't have to know who the
4 traders are, but you have to know the market.

5 QUESTION: That's right.

6 MR. ROBERTS: It could be in a particular case,
7 if there is, if it turns out that South Dakota wheat is --
8 sells at a premium to Kansas wheat, then you do have to
9 know.

10 QUESTION: Well, there's two farmers and I say,
11 you know, I have grown this new type of wheat, do you want
12 to swap it for some of your old wheat and you try some of
13 mine and I'll try some of yours. You don't consider that
14 subjective? You say that's just identifying the market?
15 That's -- that's not being subjective?

16 MR. ROBERTS: It is identifying the market, yes.

17 QUESTION: I call it being subjective.

18 MR. ROBERTS: Well, an example we put forth in
19 our brief is serial numbers on stock certificates. Do
20 those make a material difference? It depends what market
21 you're in. If you're in the market where the shares
22 represent shares in a company, you don't care what serial
23 number your share of IBM has when you swap it for another.
24 But there is also a market out there for antique shares,
25 and you want to make certain when you're trading that

1 you're getting IBM share 0001. It does make a difference.
2 You can't simply say as an abstract matter serial numbers
3 on stock certificates make no difference. It does depend
4 on the market, and it does depend on how parties in that
5 market treat the characteristic.

6 QUESTION: There are going to be a lot more
7 factual inquiries in cases involving the recognition of
8 gain if the Court accepts your theory, I think.

9 MR. ROBERTS: Well -- it is unavoidable, I
10 think, in the realization inquiry to ask, as the
11 regulation sets forth, whether the properties are
12 materially different. That is in fact a fact-specific
13 inquiry set forth in the regulations. But I don't want
14 the irony of --

15 QUESTION: Do you think the regulation when it
16 was adopted was intended to do any more than effectively
17 codify this Court's decisions?

18 MR. ROBERTS: Well, I think it was intended to
19 define and clarify the concept that the Court began to
20 articulate in the decisions in the 1920's. Those
21 decisions, of course, did not address the entire range of
22 issues in which the realization question could arise, so I
23 would assume --

24 QUESTION: I'm just -- I'm not sure that I
25 understand what you say the limiting principle is here for

1 the Government's test. It just isn't clear to me yet.

2 MR. ROBERTS: The differences that are relied
3 upon in the exchange of property have to be material
4 differences, differences that make a difference.

5 QUESTION: The differences actually relied upon.

6 MR. ROBERTS: Well, that are put forth by the
7 taxpayer in response to the challenge that that was just
8 an exchange of property that was not materially different.

9 QUESTION: Well, they have put forth those
10 differences here. There are different risks of repayment.
11 They've put forth those as differences.

12 MR. ROBERTS: There are not different risks of
13 repayment. The --

14 QUESTION: Well, but they are, because each
15 borrower has a different ability to repay the loan, and
16 perhaps the security, the collateral, is different.

17 MR. ROBERTS: The value of the mortgage loans
18 that are traded, that value, it's an asset that measures
19 risk. That's what people want to know. And the question
20 is what characteristics do you look at to effect risk.
21 Here the market does not look at who the particular
22 borrower is or what the collateral is. The parties
23 certainly had no interest in that. They were willing to
24 swap these without any regard to who the borrowers were or
25 what the collateral was, and the bank board, the Federal

1 agency charged with regulating this industry specifically
2 said that if you meet these criteria, and you -- those
3 things are then substantially identical. And if you swap
4 them your economic position is not going to change.

5 And therefore -- I don't want the irony of their
6 position to be lost. At the time they went through a
7 carefully crafted transaction to ensure that what they
8 were giving up would be substantially identical to what
9 they were getting back.

10 QUESTION: But they --

11 QUESTION: But your economic position doesn't
12 change lots of times and when you nonetheless have to
13 recognize the loss or gain. If you sell property for a
14 certain amount of money, your economic position doesn't
15 change, but you nonetheless may have to recognize the
16 loss.

17 MR. ROBERTS: Well, your net worth doesn't
18 change. If you, before you had property worth \$10,000 and
19 now you have \$10,000 in cash, but your economic position
20 changes dramatically, because you are holding very
21 different assets. Here, before and after the transaction
22 --

23 QUESTION: But, you say your economic position
24 changes dramatically when you sell stock -- 50 shares of
25 stock for \$10,000. The actual physical property which you

1 possess, the share of stock as opposed to the dollars,
2 changes, but I don't see how your economic position
3 changes.

4 MR. ROBERTS: You're worth the same before the
5 transaction and after.

6 QUESTION: Yeah.

7 MR. ROBERTS: I agree. But you're holding a
8 very different economic asset. Before the transaction --

9 QUESTION: You're holding a different asset,
10 yup.

11 MR. ROBERTS: Before the transaction you had
12 shares in stock, and they could go up and could go down.
13 After the transaction you simply had cash.

14 QUESTION: But for some centuries since the
15 invention of money, I thought people would have said you
16 economic position was the same.

17 MR. ROBERTS: Well, to the extent you mean your
18 worth, what you're worth, that hasn't changed. But you
19 have engaged in a transaction that would realize either
20 loss or gain because you've disposed of a piece of
21 property that you owned. Here that really didn't happen.
22 In the swap Cottage got back exactly what it gave up --

23 QUESTION: No it didn't, no it didn't, no it
24 didn't. All you have established is that they didn't care
25 very much about what differences there were in the

1 mortgage.

2 MR. ROBERTS: Not just that they didn't care --

3 QUESTION: But they were really different loans,
4 those -- and it turned out that the loans they got paid
5 off a good deal less than the ones they swapped. Didn't
6 they end up the losers on the thing, 100 and -- I forget
7 what the number was -- \$160,000 or so?

8 MR. ROBERTS: Well, that fact, future
9 performance, was unknown and unknowable at the time of the
10 transaction.

11 QUESTION: But that shows that in fact what they
12 got was quite different from what they gave up. They
13 didn't have the same assets afterwards.

14 MR. ROBERTS: With respect, Your Honor, the
15 subsequent performance does not show that, because what
16 the asset measures at the time is risk. And the risk at
17 the time, according to the R-49 criteria, according to the
18 perspective of the market, according to the perspective of
19 the bank board, was exactly the same.

20 QUESTION: Why isn't that true in the stock
21 example?

22 MR. ROBERTS: In the stock --

23 QUESTION: The market values the stock by taking
24 the risk into consideration, and the market says in effect
25 holding this stock gives you in effect the same economic

1 risk as holding the \$10,000.

2 MR. ROBERTS: No, because there are material
3 differences in the -- in an exchange of stock the material
4 difference is in the issuers. The fact that they coincide
5 --

6 QUESTION: No, but that's true, but I think to
7 the -- maybe I misunderstood you. I thought to the extent
8 that you were replying to Justice Scalia that you had sort
9 of two identical risk situations, that that was decisive
10 on material difference. And if that's going to be, then I
11 think you've got to carry the argument beyond the exchange
12 of mortgages into the stock example.

13 MR. ROBERTS: Well, it's like a sinking fund
14 bond. A company issues these bonds and they are going to
15 retire, say, 10 percent of them every year, and they pick
16 which ones to retire in a lottery. At the time that those
17 bonds are sold there is a risk, 10 percent risk that it
18 would be retired after the first year, and that would
19 change the subsequent performance. But those two bonds
20 have exactly the same risk, they're worth exactly the same
21 on the day they are issued. One of them is going to
22 perform very different than the other nine, but you don't
23 know which one, and the risk at that time is precisely the
24 same. And that's what these assets measure.

25 QUESTION: Of course then the rights and

1 obligations are exactly the same, too, but that's not like
2 saying that 100 homes in North Carolina are identical to
3 100 homes in South Carolina, one in the cities and another
4 in the country. There's surely a lot of difference
5 between the underlying assets.

6 MR. ROBERTS: There is a difference in the
7 underlying assets. And that we're not saying there's no
8 difference in who the borrowers are, what the --

9 QUESTION: You're just saying there's no
10 difference in the risk. But I don't know why that's any
11 different than exchanging General Motors bonds for
12 Chrysler bonds having precisely the same par value and
13 interest as -- and the reason you do it is because the tax
14 benefit you get far exceeds whatever trivial difference
15 there is in risk. That's the only motivation --

16 MR. ROBERTS: Here it's not simply the fact that
17 --

18 QUESTION: -- and it's a perfectly legitimate
19 motivation.

20 MR. ROBERTS: Here it's not simply the fact that
21 the value coincides, that the risk is the same. The
22 reason the value coincides, the risk is the same, is
23 because Cottage and its trading partners went through an
24 elaborate transaction --

25 QUESTION: Yeah, but you say that doesn't

1 matter. If they just picked it out of the air and it just
2 happened to come out this way it would be the same thing.

3 MR. ROBERTS: It could happen to have the same
4 risk, but we wouldn't say they are not therefore
5 materially different.

6 QUESTION: I think you're really making a
7 subjective test argument.

8 MR. ROBERTS: It depends on the nature of the
9 transaction.

10 QUESTION: Of the market, you say, which --

11 MR. ROBERTS: And of the market.

12 QUESTION: Let's go to your sinking -- your
13 sinking fund bonds again where, where they are selected
14 randomly which ones will be paid off over the 10-year
15 period. And let's assume I call up a friend of mine, I
16 say you know, I'm feeling lucky this week. I have these
17 sinking fund bonds, what do you say I swap mine for yours,
18 because I'm really feeling lucky. Now, is that -- does
19 that trigger recognition of loss or gain?

20 MR. ROBERTS: No. No, the tax --

21 QUESTION: Why not?

22 MR. ROBERTS: -- law doesn't look at
23 idiosyncracies in particular taxpayers. If one of these
24 parties said --

25 QUESTION: Oh, it has to rise to the level of

1 being a market? Suppose I called it a market, a market in
2 sinking fund bonds, you know. I'll trade you the numbers
3 I have for the numbers you have.

4 MR. ROBERTS: It would be no different than if
5 one of these trading partners decided it was only going to
6 swap loans that happen to have red folders and not green
7 ones. They said just give me the red ones and not the
8 green ones. That type of idiosyncrasy would not be taken
9 into account in the tax law. But we do need to look at
10 the nature of the market to decide what are material
11 differences. There is no way to say as an abstract
12 matter, as the court of appeals in the Centennial case
13 did, that we know that the borrowers and collateral make a
14 difference.

15 QUESTION: But this is a material difference for
16 that market. Suppose there are 10 people that do this? I
17 open a trading post, you know, for people who want to
18 gamble with these bonds. You trade the numbers I have for
19 the numbers you have, we'll see whose gets called sooner
20 or later. That's the only, the only thing that we're
21 trading them for. And you say that does not create a
22 market?

23 MR. ROBERTS: No, it wouldn't.

24 QUESTION: I don't understand why.

25 MR. ROBERTS: Not a rational, economic --

1 QUESTION: Well, let me give you another.
2 Supposing in this very case you had the same economic
3 analysis, but in addition to the tax motivation one of the
4 traders said we'd like to concentrate more of our loans in
5 urban areas, and the other one said we want to move into
6 rural areas, just as a matter of policy. So they selected
7 rural versus urban, but came up with the same economic
8 analysis you have in this case. Is that -- would you
9 realize a loss or not then?

10 MR. ROBERTS: Well, that of course is the
11 argument that Fannie Mae raises in the Centennial case
12 where it's filed in an amicus brief. It would be the same
13 analysis in that case, because the differences in the
14 location alone did not have any effect on the market or on
15 the value.

16 QUESTION: And that would not be material
17 difference?

18 MR. ROBERTS: The position that they're
19 advancing is, is somewhat inherently inconsistent.
20 They're saying, for example, that the urban loans are
21 going to prepay faster, or --

22 QUESTION: No, they just want to advertise to
23 the public we're an urban loan mortgage company or
24 something. It has nothing to do with their judgment of
25 which will get paid out faster, they just liked to -- or

1 they wanted to have them all in the Northeast instead of
2 the Southeast, or something like that.

3 MR. ROBERTS: A factor that's extrinsic to the
4 market like that, and that has no effect on value, I don't
5 think is --

6 QUESTION: But why then is that different from
7 General Motors versus AT&T? I don't understand.

8 MR. ROBERTS: Well, because General Motors and
9 AT&T are shares of stock in two very different
10 corporations.

11 QUESTION: Well, but these are different areas
12 of the country, different types of property, and you've
13 got 90 percent of twice as many loans instead of 100
14 percent of half as many loans -- I mean, 90 percent and 10
15 percent. You've got an interest in a portfolio twice as
16 large as the one you started with, too.

17 MR. ROBERTS: We're not -- we're not saying
18 there are not differences. There are differences.

19 QUESTION: You just say they're not material.

20 MR. ROBERTS: They're not material differences,
21 because they make no difference to the market or to the
22 bank board. The bank board --

23 QUESTION: Well, now wait, to the market or the
24 bank board. Suppose the market says urban, rural, it
25 makes no difference, we're going to value them the same.

1 But I, as a banker, I think that urban real estate is
2 really going to flop. I'm the only one, but, you know,
3 that's how people get rich. I happen to think that. And
4 therefore my motivation is to get rid of my urban holdings
5 and acquire rural holdings. But the market is not taking
6 account of urban versus rural. Those dumb people out
7 there, they think they're all the same. But I, I have a
8 special motive. What happens? Is that an event that
9 would produce recognition or not?

10 MR. ROBERTS: Then you couldn't have done an R-
11 49 transaction, because one of the things you had to make
12 certain of in your R-49 transaction was that the fair
13 market value of the loans you're swapping were the same.
14 And if you didn't think they were, then you couldn't go to
15 the bank board and say I have no loss, these are the same.

16 QUESTION: No, I haven't said -- I have said the
17 fair market value is the same, because the dumb people
18 like -- out there, who create the market, they think it's
19 all the same. That's how people get rich, you know. They
20 out guess the market. The market value is the same, but I
21 personally want to get more rural real estate. And you're
22 saying that cannot be a recognizable event because the
23 market doesn't recognize that difference?

24 MR. ROBERTS: Well, I still think you can't
25 engage in an R-49 transaction because you would have to

1 report -- you would have to tell the bank board --

2 QUESTION: You either have to come out with a --
3 what seems to me a silly position on that hypothetical, or
4 you have to acknowledge that you're applying a subjective
5 test and not an objective test.

6 MR. ROBERTS: Well -- I'm not sure how much
7 difference it makes whether you attach the label
8 subjective or objective. Our position is that you look to
9 the conduct and the intent of the parties as probative
10 evidence of the nature of the transaction in which they
11 engaged. Now, if people were making those judgments, that
12 these loans were in fact different, I think they're going
13 to do better.

14 QUESTION: Just me. Nobody else.

15 MR. ROBERTS: Well, just you. Then we'd have to
16 look at the other evidence and see if that meant that that
17 characteristic was or should be considered a material
18 difference in these transactions. Here all of the
19 parties, not just in this case and the other cases, did
20 not regard the differences that are now cited after the
21 fact as material -- as material at the time. The bank
22 board didn't. The bank board's job in the, issuing these
23 accounting standards was to keep track of how the position
24 of the S&L's changed. And they said if you match these up
25 according to the R-49 criteria and you swap those loans,

1 your position is not changed; you're substantially
2 identical. And now they want to come back and say that
3 the substantially identical loans are actually materially
4 different.

5 QUESTION: Mr. Roberts, what should -- don't you
6 have to do something about the court of appeals' holding?

7 MR. ROBERTS: Our position, Your Honor, is that
8 the court of appeals, first of all, was wrong to conclude
9 that there was no materially different requirement. We
10 think there it. It's set forth in a regulation that has
11 been in effect since 1935. Second --

12 QUESTION: Say that again?

13 MR. ROBERTS: The court of appeals in this case
14 rejected our argument that there is a materially different
15 requirement in the tax law --

16 QUESTION: Oh, yes.

17 MR. ROBERTS: And we think that was wrong. The
18 requirement is set forth in the regulation which has been
19 in effect since 1935, and this Court has frequently noted
20 the deference that is due Treasury regulations. Now, if
21 the Court rejects that position, if this Court rejects
22 that position and agrees with the Sixth Circuit that there
23 is no materially different requirement, then we think that
24 the same reasons that we advanced in the materially
25 different context should be applied under section 165. So

1 we're not --

2 QUESTION: Which you think is what the court of
3 appeals did in this case?

4 MR. ROBERTS: In this case the court of appeals
5 said there is no materially different requirement --

6 QUESTION: Yeah.

7 MR. ROBERTS: -- but then the same arguments it
8 applied in the 165 pigeon hole.

9 QUESTION: So you do defend the court of
10 appeals' treatment of 165 if we reach that question?

11 MR. ROBERTS: Yes, if it's necessary to reach
12 that question, we agree with it. The --

13 QUESTION: But you think the arguments are
14 essentially the same? Loss sustained and gain realized is
15 the same concept?

16 MR. ROBERTS: We think so. We think it's
17 properly addressed under the realization rubric, because
18 that's where the Treasury regulation is, and that
19 regulation is entitled to deference and can be applied.
20 But if the Court disagrees with that, then we don't think
21 a loss has been sustained, because, by the nature of the
22 transaction, Cottage got back something that was
23 substantially identical to what it -- to what it gave up.

24 Now, my brother hasn't mentioned exactly what
25 the R-49 criteria are, and I think it's important to keep

1 that in mind. They were very -- 10 very precise criteria
2 that had to be matched, and they were matched by computer
3 before the swap could take place. Loans had to be secured
4 by a single family residence in the same State, they had
5 to have the same terms for 30-year loan, had to be the
6 same type, conventional for conventional, same interest
7 rate, similar seasoning, principal amount, swapped without
8 recourse, similar fair market value, similar loan-to-
9 value ratio. Those were all matched up, and when those
10 were all matched up the parties were willing to swap those
11 straight up.

12 Differences in borrowers and collateral or some
13 of the differences that Justice Scalia were talking about,
14 if those made a difference they would have entered into
15 the calculation of the value. They would have said here
16 are loans matched up according to R-49. Do you want to
17 trade? And you say no, I think urban loans are going to
18 be more valuable, mine is worth more. Or I think this
19 borrower is less of a credit risk, yours is worth more.
20 But that didn't happen. Same discount factor. They
21 matched the two loans up; they were each sold for 62
22 percent of book value.

23 QUESTION: But on that reasoning, if the
24 computer had matched up two baskets of common stock, you
25 would then reach the same result in this case, wouldn't

1 you?

2 MR. ROBERTS: No, the value would be the same in
3 that case, but that's not all we're saying. It's not
4 simply the fact that the value is the same. The value is
5 the same because they are matched up according to the
6 factors that the market considers in arriving at an
7 assessment of risk. That's not the case in just matching
8 up baskets of stock so that the --

9 QUESTION: What about baskets of stock in the
10 same industry? All common stock, all in oils or all in
11 chemicals, and so on?

12 MR. ROBERTS: There is a material difference
13 between Texaco stock and Exxon stock.

14 QUESTION: Because the companies are different.

15 MR. ROBERTS: Because the companies are
16 different and the shares represent a share in those
17 companies. Here the sole purpose of the mortgage loan in
18 the secondary mortgage market is to measure risk. And
19 here the bank board told you what you had to match up to
20 make sure the risks were the same, and then said if you
21 did that you could swap them.

22 QUESTION: What about bonds? Do they, do they
23 go with stock or do they go with mortgage loans?

24 MR. ROBERTS: I think if someone were investing
25 in a bond, they'd want to know whose bond it is. In the

1 secondary mortgage market someone who is investing in
2 these pools of substantially identical mortgage loans
3 doesn't say who is the borrower on that originally, or
4 what condition is the --

5 QUESTION: So if I have computers do this thing
6 with bonds, it's no good, but if they do it with
7 mortgages, it's okay?

8 MR. ROBERTS: Well, it's not just the fact that
9 the computers are doing it. It's that the market treats
10 it differently. Most parties are going to treat it
11 differently. And they are different. A Texaco bond, no
12 matter how closely matched, is different than an Exxon
13 bond.

14 QUESTION: What about two different issues of
15 Texaco bonds? You know, they do them periodically. Both
16 due in 1991, both the same interest rate.

17 MR. ROBERTS: Well, if it's --

18 QUESTION: And then the next question if you say
19 well, that's the same, then what if they're slightly
20 different in interest or maturity, but market value is
21 precisely the same because one is discounted to 99 and the
22 other is 101?

23 MR. ROBERTS: Well, there is line drawing --

24 QUESTION: Is there material difference or not
25 between two bond issues of the same corporation?

1 MR. ROBERTS: If they're identical, there is --
2 QUESTION: They're not identical, but they're
3 identical in market value.
4 MR. ROBERTS: Well, then we need to know what
5 the differences are.
6 QUESTION: Well, one's a slightly higher
7 interest rate and slightly different maturity, but the,
8 but it all washes out when you trade it at the time
9 because you buy it at a discounted rate.
10 MR. ROBERTS: I believe that those would be
11 found to be materially different --
12 QUESTION: It would be materially different.
13 MR. ROBERTS: -- because of the difference in
14 the terms. All of the -- all of the terms that the market
15 --
16 QUESTION: It seems to me they're a lot more
17 alike than what you've got here.
18 MR. ROBERTS: No, if you're trading bonds on the
19 market, the first thing you're going to ask, of course, is
20 whose bond is it and what's the interest rate. So a
21 change in interest rate is going to be different. Here
22 the only things that --
23 QUESTION: Yes, you changed the interest rate on
24 the coupon, but the effective interest rate, because you
25 buy it at a discount, is precisely the same. When you buy

1 bonds on the market, you don't buy them at par.

2 MR. ROBERTS: Well, but it's going to make a
3 difference. It's going to make a difference to the
4 rational economic trader which bond he has.

5 QUESTION: What about exchanges of shares
6 identically valued in two separate bond funds? The person
7 who buys doesn't know what bonds his fund is holding.

8 MR. ROBERTS: Well, but there again it's sort of
9 like the mutual fund example. The differences in the
10 management, how they're going to trade the bonds is
11 something that would be a material difference.

12 QUESTION: Well, I think though, we're -- again
13 we're right back to the fact that there are differences in
14 the homeowners who are going to pay or not pay the loans,
15 there are differences in the banks who are not -- are or
16 are not going to collect promptly. I don't see where the
17 distinction lies.

18 MR. ROBERTS: Well, the distinction is partly in
19 the market. I mean, we're familiar with how important who
20 the borrower is and what the collateral is when you take
21 out a mortgage on your home. But the market in pools of
22 these mortgage loans doesn't work that way. They don't
23 care who the borrower is. They want to know what's the
24 fair market value, what's the loan-to-value ratio, what's
25 the interest rate, what's the seasoning, in other words

1 the factors that are set forth in Memorandum R-49. These
2 other differences did not make a difference to the market,
3 did not make a difference to the parties acting in that
4 market, and did not make a difference to the bank board.

5 The swap pools of mortgages loans were therefore
6 not materially different under the Treasury regulation as
7 interpreted by the Commissioner, and therefore did not
8 result in a realized loss.

9 QUESTION: Yeah, but in my example the
10 differences in the bonds in the two funds didn't make any
11 difference to the fair market value of the share of stock
12 either. And yet no one would argue that the bonds were
13 all identical and that they all carried -- that they all
14 were in fact going to perform necessarily in the same way
15 over time.

16 MR. ROBERTS: It's not just the value, it's the
17 factors that went into determining value. And the whole
18 purpose of Memorandum R-49 was to make sure that the
19 factors that went into determining value were matched up
20 precisely.

21 Thank you, Your Honor.

22 QUESTION: Thank you, Mr. Roberts.

23 Mr. Manes, do you have rebuttal? You have 4
24 minutes remaining.

25 REBUTTAL ARGUMENT OF DENNIS L. MANES

1 ON BEHALF OF THE PETITIONER

2 MR. MANES: Mr. Chief Justice, and may it please
3 the Court:

4 I'd like to address various issues that were
5 raised by the Government, and one came up in the context
6 of what if the reverse was the situation and we were
7 arguing gain. And the answer to that was that gain would
8 be realized. And that argument is contrary to the
9 argument that the Government raised in every reported type
10 case that involves -- that this body has decided, starting
11 with Weiss and going through Rockefeller, Fellis, and so
12 forth. There the Government has always argued for a hair-
13 trigger test as to what is realization, that it doesn't
14 take very much of a difference, and that the difference is
15 based upon objective items. For example, in Weiss,
16 whether or not the -- there were different terms on the
17 refunding, or on the bonds or the stock that was involved.
18 Whether or not they were located in different States. And
19 these were objective criteria. The --

20 Another interesting point that was alluded to is
21 whether or not this transaction, if it occurred today, at
22 least from a regulatory standpoint, would be given the
23 same effect. And it's clear under the statement of
24 position of the AICPA, which the regulatory bodies would
25 now follow because the regulatory bodies for RAP or

1 regulatory purposes follow general accounting principles,
2 would require these types of transactions to be realized
3 and recognized from a financial accounting standpoint.
4 And, you know, that is, you know, consistent to the tax
5 laws.

6 Realization should only require two things.
7 One, has there been an increase or decrease in value of
8 the asset involved from the basis which you hold it, and
9 two, whether or not there has been a sale or disposition.

10 QUESTION: Excuse me --

11 MR. MANES: And from there --

12 QUESTION: Could I -- for regular accounting
13 purposes, you would have to revalue these mortgages even
14 if you didn't engage in a swap, isn't that right? I mean,
15 if you're following normal, what's the organization that
16 you mentioned? Wouldn't their normal procedures require
17 you to revalue your stock of mortgages --

18 MR. MANES: That would be correct.

19 QUESTION: -- as there's a decline in the real
20 estate market, whether or not you trade them for other
21 mortgages?

22 MR. MANES: That would be correct.

23 QUESTION: Does the accounting reference you
24 made appear in any of your briefs?

25 MR. MANES: Yes, Your Honor. It appears in our

1 brief on page 17.

2 QUESTION: Thank you.

3 MR. MANES: And then after a realization is
4 determined, you look to the statutory authority that
5 Congress has laid out to see whether or not the
6 realization is to be recognized. And these statutory
7 exceptions to recognition are very clear, and the
8 Government is asking the Court to develop a nonstatutory
9 recognition rule, and they do it in the guise of
10 realization.

11 CHIEF JUSTICE REHNQUIST: Thank you, Mr. Manes.
12 The case is submitted.

13 (Whereupon, at 11:05 a.m., the case in the
14 above-entitled matter was submitted.)
